Organic Chemistry Of The Atmosphere:

Volatile Organic Compounds in the Atmosphere Ralf Koppmann, 2008-04-15 Every day large quantities of volatile organic compounds VOCs are emitted into the atmosphere from both anthropogenic and natural sources The formation of gaseous and particulate secondary products caused by oxidation of VOCs is one of the largest unknowns in the quantitative prediction of the earth's climate on a regional and global scale and on the understanding of local air quality To be able to model and control their impact it is essential to understand the sources of VOCs their distribution in the atmosphere and the chemical transformations which remove these compounds from the atmosphere In recent years techniques for the analysis of organic compounds in the atmosphere have been developed to increase the spectrum of detectable compounds and their detection limits New methods have been introduced to increase the time resolution of those measurements and to resolve more complex mixtures of organic compounds Volatile Organic Compounds in the Atmosphere describes the current state of knowledge of the chemistry of VOCs as well as the methods and techniques to analyse gaseous and particulate organic compounds in the atmosphere The aim is to provide an authoritative review to address the needs of both graduate students and active researchers in the field of atmospheric chemistry research

Radiation Protection and Dosimetry Michael G. Stabin, 2008-11-01 This book provides a comprehensive yet accessible overview of all relevant topics in the field of radiation protection health physics The text is organized to introduce the reader to basic principles of radiation emission and propagation to review current knowledge and historical aspects of the biological effects of radiation and to cover important operational topics such as radiation shielding and dosimetry The author's website contains materials for instructors including PowerPoint slides for lectures and worked out solutions to end of chapter exercises The book serves as an essential handbook for practicing health physics professionals

Chemical Compounds in The Atmosphere T Graedel, 2012-12-02 Chemical Compounds in the Atmosphere deals with the chemistry of organic and inorganic compounds found in the atmosphere including rare gases and compounds of oxygen and hydrogen halogenated aromatic compounds and organometallic compounds The sources and concentrations of atmospheric trace gases are discussed along with their chemical reactions and ultimate fates The compounds are divided into groups on the basis of chemical constituent or chemical structure Comprised of 10 chapters this book opens with an overview of atmospheric composition and atmospheric chemistry followed by a discussion on inorganic compounds present in the

troposphere such as rare gases and compounds containing nitrogen sulfur and halogens The next chapters focus on hydrocarbons such as alkanes alkenes and alkynes carbonyl compounds such as ketones and aldehydes oxygenated and nitrogen and sulfur containing organic compounds organic halogenated compounds such as mercaptans and thiocyanates and organometallic compounds such as organophosphorus pesticides The final chapter is a synthesis of data on atmospheric compounds mentioned in this text with emphasis on their occurrence sources oxidation and lifetimes The chemistry of acid rain is also considered This monograph will be of value to those engaged in atmospheric measurements theoretical and laboratory studies of chemical parameters relevant to the atmosphere and air quality assessments
