Adelsberger, Jan M. Pawlowski, 2002 Information Technologies for Education and Training have gained increasing attention and significance in the past decade. Accordingly, the availability of an enormous amount of information sources through the Internet, the technological progress in the ICT sector, and an increasing flexibility in organizations and enterprises have accelerated the information and knowledge growth in our society. Knowledge and Lifelong Learning have become critical success factors for the long-term positioning on the global market. Recent mergers of globally distributed enterprises show that knowledge has to be available and transferable within a short time frame. Global flexible and service-oriented organizations need highly qualified employees. These trends also show the rapidly growing significance of new aspects of basic and further education. Traditional education ending with a graduation will be complemented by a lifelong learning process. Every individual is required to continuously learn new and changing knowledge. Consequently, the support of learning processes through innovative technologies becomes an elementary component of every educational level. The Handbook is a comprehensive guide for researchers and practitioners working with Educational Technologies. Its overall goal is to enable the reader to gain a deep understanding of past, current, and future research and applications in the field of Educational Technologies. It will provide a reference source for both practitioners and researchers in the enterprise and educational sector. From a research perspective, the reader will gain an in-depth understanding of complex theories, strategies, concepts, and methods of Educational Technologies.

Education Gary Thomas, 2021 This new edition explores how and why education has evolved as it has, examining the ways in which it has responded over the centuries to influences in politics, philosophy, and the social sciences. Focusing on education today, it considers the controversies over progressive versus formal teaching and also examines education worldwide.

Volume 1: Research Syntheses M. Kathleen Heid, Glendon W. Blume, 2008-07-01 According to NCTM's Principles and Standards for School Mathematics, Technology is essential in teaching and learning of mathematics; it influences the mathematics that is taught and it enhances students' learning. How does research inform this clarion call for technology in mathematics teaching and learning? In response to the need to craft appropriate roles for technology in school mathematics, new technological approaches have been applied to the teaching and learning of mathematics, and these approaches have been examined by researchers worldwide. The first volume provides insight into what research suggests about the nature of mathematics learning in technological environments. Included in this volume are syntheses of research on technology in the learning of rational number, algebra, elementary and secondary geometry, mathematical modeling, and calculus. Additional chapters synthesize research on technology in the practice of teaching and on equity issues in the use of technology in mathematics instruction. Instead of simply reporting achievement scores of students who use technology in their learning, authors provide thoughtful analyses of bodies of research with the goal of understanding the ways in which technology affects what and how students learn. Each of the chapters in this volume is written by a team of experts whose own research has provided important guidance to the field.
