Bold Kids,2022-08-15 If you've ever wondered what the difference between a cat with a saber tooth and one without one might be you've come to the right place Listed below are Saber Tooth Cat Facts and some interesting trivia about these furry felines Saber toothed mammals are extinct and largely carnivorous Their teeth are extremely long and curved protruding out of their mouths when closed The saber toothed cat had a very sharp set of canines and a mouth nearly twice the size of a lion It didn't have a strong jaw so it could bite bones but it did use its teeth to tear prey to pieces While the cat's teeth were very sharp and used for ripping and tearing they didn't rely on them as a weapon their teeth grew at an impressive eight millimeters per month a rate equal to that of a human The saber toothed cat had long muscular legs and a bobtail Modern cats don't have long tails which provides stability while chasing prey The saber toothed cat would have had to wait until its prey was in position for a fatal bite Instead of chasing prey a saber toothed cat would have had to ambush to protect its teeth Although the Saber Tooth Cat is now extinct they were the most common predators of their time The first saber toothed creatures shared the same jaw structure as leopards and as their jaws grew longer their canines became increasingly sharp and their muscles became stronger the saber toothed cat eventually populated all of North and South America While the saber toothed cat had many species the one most commonly known is *Smilodon fatalis* Saber-toothed Tiger and Other Ice Age Mammals Joanna Cole,1977 Describes such Ice Age mammals as the saber toothed tiger mastodon and cave bear

carcass of a 16 year old woolly mammoth that perished some 30 000 years ago almost completely intact The mammoth initially nicknamed Zhenya after its discoverer was said to be the most significant discovery of a mammoth since 1901 Since Georges Cuvier recognized the specimens as an extinct elephant species near the end of the 18th century various finds of mammoth fossils particularly in places where they were well preserved in the cold have made the woolly mammoth perhaps the most popular extinct animal outside of the dinosaurs Standing around 10 feet tall and weighing several tons woolly mammoths seem like the stuff of legend but ancient cave art indicated that unlike dinosaurs woolly mammoths were contemporaries of early humans with the last ones going extinct only about 4 000 years ago All of that explains why people have long been fascinated by woolly mammoths and have even envisioned bringing them back to life via genetics sometime in the future
