Teaching General Chemistry Mansoor Niaz, 2008 The main objective of this monograph is to incorporate history and philosophy of science in the chemistry curriculum in order to provide students an overview of the dynamics of scientific research which involves controversies conflicts and rivalries among scientists that is the humanising aspects of science A major thesis of this book is the parallel between the construction of knowledge by the students and the scientists In looking for this relationship it is not necessary that ontogeny recapitulate phylogeny but rather to establish that students can face similar difficulties in conceptualising problems as those faced by the scientists in the past Given the vast amount of literature on students alternative conceptions misconceptions in science it is plausible to suggest that these can be considered not as mistakes but rather as tentative models leading to greater conceptual understanding Just as scientists resist changes in the hard core of their beliefs by offering auxiliary hypotheses students may adopt similar strategies Conceptual change in science education can thus be conceptualised as building of tentative models that provide greater explanatory power to students understanding

Metal Ions and Neurodegenerative Disorders Paolo Zatta, 2003 Numerous studies have established a clear connection between neuronal oxidative stress and several neurodegenerative diseases with consequential damages to lipids proteins nucleic acids etc In addition several modifications indicative of oxidative stress have been described in association with neurons neurofibrillary tangles and senile plaques in Alzheimer's disease including advanced glycation end products and free carbonyl oxidation Oxidative damage and antioxidant responses are now well characterized but sources of damaging free radicals are yet to be fully understood Evidences of alteration in metal ions metabolism have been reported in various diseases like Alzheimer's Wilson Menkes Prion Pick Huntington disease epilepsy and other pathological events Thus metal ions play a pivotal role in neurodegenerative phenomena Chelation therapy is still in the early days of its development but

research in this area could lead to new products that could revolutionize treatment Two international conferences on OC Metals and the Brain From Neurochemistry to NeurodegenerationOCO Padova Italy 2000 and Fez Morocco 2002 were recently held to discuss the role of metal ions in neurophysiopathology A third will be held in 2005 in Johannesburg South Africa This book follows the same train of thought as those conferences in order to highlight the unquestionable importance of metal ions in the research on the neurophysiopathology of neurodegenerative diseases The excellent reputation of the scientists who have contributed to this project ensures the quality of the chapters presented here and hopefully this will help spur new research initiatives in the field which is still in its infancy Contents Metal Catalyzed Redox Activity in Neurodegenerative Disease M A Taddeo et al Aluminum and Central Nervous System Morphology in Hemodialysis E Reusche Transition Metals Oxidation Lipoproteins and Amyloid Major Players in Alzheimer s Disease A Kontush Molecular Basis of Copper Transport Cellular and Physiological Functions of Menkes and Wilson Disease Proteins ATP7A and ATP7B D R Kramer et al Copper Zinc Superoxide Dismutase and Familial Amyotrophic Lateral Sclerosis M B Yim et al Copper and Prion Disease J Sasson Metallothioneins in Neurodegeneration M Aschner et al Iron and Neurodegeneration S L Grab Iron Neuromelanin and Synuclein in Neuropathogenesis of Parkinson s Disease K L Double et al Iron and Epilepsy W Y Ong et al Role of Iron Metabolism in Multiple Sclerosis M J Kotze et al Neuroprotective Effects of Lithium S Ermidiou Pollet and other articles Readership Academics graduate students and researchers in neurology psychiatry neuroscience and environmental health
