Séminaire de Théorie des Nombres, Paris 1987-88 Goldstein,2012-12-06 Séminaire de Théorie Des Nombres
Sinnou David,1993-12-23 This is the 13th annual volume of papers based on lectures given at the Seminaire des Nombres de Paris The results presented here by an international group of mathematicians reflect recent work in many areas of number theory and should form a basis for further discussion on these topics **Séminaire de Théorie Des Nombres, Paris 1987-88** Catherine Goldstein,1990 *Seminaire de Theorie Des Nombres, Paris 1984-85* Catherine Goldstein,1986 **Sur les Groupes Hyperboliques d'après Mikhael Gromov** Etienne Ghys,Pierre de la Harpe,2013-12-11 The theory of hyperbolic groups has its starting point in a fundamental paper by M Gromov published in 1987 These are finitely generated groups that share important properties with negatively curved Riemannian manifolds This monograph is intended to be an introduction to part of Gromov's theory giving basic definitions some of the most important examples various properties of hyperbolic groups and an application to the construction of infinite torsion groups The main theme is the relevance of geometric ideas to the understanding of finitely generated groups In addition to chapters written by the editors contributions by W Ballmann A Haefliger E Salem R Strebel and M Troyanov are also included The book will be particularly useful to researchers in combinatorial group theory Riemannian geometry and theoretical physics as well as post graduate students interested in these fields *Seminaire De Theorie Des Nombres, Paris 1988-1989 (progress In Mathematics, Vol 91)* Catherine Goldstein,1990 Very Good No Highlights or Markup all pages are intact Analytic Number Theory B. Berndt,2012-12-06 On April 25-27 1989 over a hundred mathematicians including eleven from abroad gathered at the University of Illinois Conference Center at Allerton Park for a major conference on analytic number theory The occasion marked the seventieth birthday and impending official retirement of Paul T Bateman a prominent number theorist and member of the mathematics faculty at the University of Illinois for almost forty years For fifteen of these years he served as head of the mathematics department The conference featured a total of fifty-four talks including ten invited lectures by H Delange P Erdos H Iwaniec M Knopp M Mendes France H L Montgomery C Pomerance W Schmidt H Stark and R C Vaughan This volume represents the contents of thirty of these talks as well as two further contributions The papers span a wide range of topics in number theory with a majority in analytic number theory Functional Calculus of Pseudodifferential Boundary Problems Gerd Grubb,2012-12-06 Pseudodifferential methods are central to the study of partial differential equations because they permit an algebraization A replacement of compositions of operators in n space by simpler product rules for their symbols The main purpose of this book is to set up an operational calculus for operators defined from differential and pseudodifferential boundary value problems via a resolvent construction A secondary purpose is to give a complete treatment of the properties of the calculus of pseudodifferential boundary problems with transmission both the first version by Boutet de Monvel brought completely up to date in this edition and in version containing a parameter running in an

unbounded set And finally the book presents some applications to evolution problems index theory fractional powers spectral theory and singular perturbation theory In this second edition the author has extended the scope and applicability of the calculus with original contributions and perspectives developed in the years since the first edition A main improvement is the inclusion of globally estimated symbols allowing a treatment of operators on noncompact manifolds Many proofs have been replaced by new and simpler arguments giving better results and clearer insights The applications to specific problems have been adapted to use these improved and more concrete techniques Interest continues to increase among geometers and operator theory specialists in the Boutet de Monvel calculus and its various generalizations Thus the book's improved proofs and modern points of view will be useful to research mathematicians and to graduate students studying partial differential equations and pseudodifferential operators

Analytic Number Theory: The Halberstam Festschrift 2 Bruce C. Berndt, Harold Diamond, Adolf J Hildebrand, 1996-05-01 The second of two volumes presenting papers from an international conference on analytic number theory The two volumes contain 50 papers with an emphasis on topics such as sieves related combinatorial aspects multiplicative number theory additive number theory and Riemann zeta function

Nilpotent Orbits, Primitive Ideals, and Characteristic Classes Walter Borho, J.-L. Brylinski, R. MacPherson, 2012-12-06 1 The Subject Matter Consider a complex semisimple Lie group G with Lie algebra \mathfrak{g} and Weyl group W In this book we present a geometric perspective on the following circle of ideas polynomials The vertices of this graph are some of the most important objects in representation theory Each has a theory in its own right and each has had its own independent historical development A nilpotent orbit is an orbit of the adjoint action of G on \mathfrak{g} which contains the zero element of \mathfrak{g} in its closure For the special linear group $G = \mathrm{SL}(n, \mathbb{C})$ whose Lie algebra \mathfrak{g} is all $n \times n$ matrices with trace zero an adjoint orbit consists of all matrices with a given Jordan canonical form such an orbit is nilpotent if the Jordan form has only zeros on the diagonal In this case the nilpotent orbits are classified by partitions of n given by the sizes of the Jordan blocks The closures of the nilpotent orbits are singular in general and understanding their singularities is an important problem The classification of irreducible Weyl group representations is quite old

New Developments in Lie Theory and Their Applications Juan Tirao, Wallach, 2012-12-06 Representation theory and more generally Lie theory has played a very important role in many of the recent developments of mathematics and in the interaction of mathematics with physics In August September 1989 a workshop Third Workshop on Representation Theory of Lie Groups and its Applications was held in the environs of Córdoba Argentina to present expositions of important recent developments in the field that would be accessible to graduate students and researchers in related fields This volume contains articles that are edited versions of the lectures and short courses given at the workshop Within representation theory one of the main open problems is to determine the unitary dual of a real reductive group Although this problem is as yet unsolved the recent work of Barbasch Vogan Arthur as well as others has shed new light on the structure of the problem The article of D Vogan presents an exposition of some aspects of this problem emphasizing an extension of the orbit method of Kostant Kirillov Several examples are given that explain why the orbit method should be extended and how this extension should be implemented *Computational Algebraic Geometry* Frederic Eyssette, Andre Galligo, 2012-12-06 The theory and practice of computation in algebraic geometry and related domains from a mathematical point of view has generated an increasing interest both for its rich theoretical possibilities and its usefulness in applications in science and engineering In fact it is one of the master keys for future significant improvement of the computer algebra systems e.g. Reduce Macsyma Maple Mathematica Axiom Macaulay etc that have become such useful tools for many scientists in a variety of disciplines The major themes covered in this volume arising from papers presented at the conference MEGA 92 were Effective methods and complexity issues in commutative algebra projective geometry real geometry and algebraic number theory Algebra geometric

methods in algebraic computing and applications MEGA 92 was the second of a new series of European conferences on the general theme of Effective Methods in Algebraic Geometry It was held in Nice France on April 21-25 1992 and built on the themes presented at MEGA 90 Livorno Italy April 17-21 1990 The next conference MEGA 94 will be held in Santander Spain in the spring of 1994 The Organizing committee that initiated and supervises this biennial conference consists of A Conte Torino J H Davenport Bath A Galligo Nice D Yu Grigoriev Petersburg J Heintz Buenos Aires W Lassner Leipzig D Lazard Paris H M Moller Hagen T Mora Genova M Pohst Dusseldorf T Recio Santander J J

Structure of Decidable Locally Finite Varieties Ralph McKenzie, Matthew Valeriote, 2012-12-06 A mathematically precise definition of the intuitive notion of algorithm was implicit in Kurt Godel's 1931 paper on formal undecidable propositions of arithmetic During the 1930s in the work of such mathematicians as Alonzo Church Stephen Kleene Barkley Rosser and Alfred Tarski Godel's idea evolved into the concept of a recursive function Church proposed the thesis generally accepted today that an effective algorithm is the same thing as a procedure whose output is a recursive function of the input suitably coded as an integer With these concepts it became possible to prove that many familiar theories are undecidable or non recursive i.e. that there does not exist an effective algorithm recursive function which would allow one to determine which sentences belong to the theory It was clear from the beginning that any theory with a rich enough mathematical content must be undecidable On the other hand some theories with a substantial content are decidable Examples of such decidable theories are the theory of Boolean algebras Tarski 1949 the theory of Abelian groups Szemiele 1955 and the theories of elementary arithmetic and geometry Tarski 1951 but Tarski discovered these results around 1930 The determination of precise lines of division between the classes of decidable and undecidable theories became an important goal of research in this area algebra we mean simply any structure $\langle A, \{f_i\}_{i \in I}\rangle$ consisting of a nonvoid set A and a system of finitary operations f_i over A

Number Theory I Yu. I. Manin, Alexei A. Panchishkin, 2013-04-17 Preface Among the various branches of mathematics number theory is characterized to a lesser degree by its primary subject integers than by a psychological attitude Actually number theory also deals with rational algebraic and transcendental numbers with some very specific analytic functions such as Dirichlet series and modular forms and with some geometric objects such as lattices and schemes over \mathbb{Z} The question whether a given article belongs to number theory is answered by its author's system of values If arithmetic is not there the paper will hardly be considered as number theoretical even if it deals exclusively with integers and congruences On the other hand any mathematical tool say homotopy theory or dynamical systems may become an important source of number theoretical inspiration For this reason combinatorics and the theory of recursive functions are not usually associated with number theory whereas modular functions are In this report we interpret number theory broadly There are compelling reasons to adopt this viewpoint First of all the integers constitute together with geometric images one of the primary subjects of mathematics in general Because of this the history of elementary number theory is as long as the history of all mathematics

and the history of modern mathematic began when numbers and figures were united by the concept of coordinates which in the opinion of LR Shafarevich also forms the basic idea of algebra **French Mathematical Seminars** Nancy D.
