*The Neolithic Transition and the Genetics of Populations in Europe* Albert J. Ammerman, L L Cavalli-sforza, 2014-07-14

This book explores the shift from hunting and gathering to agriculture as a way of life and the implications of this neolithic transition for the genetic structure of European populations Originally published in 1984 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 The

Global Prehistory of Human Migration Immanuel Ness, 2014-08-29 Previously published as the first volume of The Encyclopedia of Global Human Migration this work is devoted exclusively to prehistoric migration covering all periods and places from the first hominin migrations out of Africa through the end of prehistory Presents interdisciplinary coverage of this topic including scholarship from the fields of archaeology anthropology genetics biology linguistics and more Includes contributions from a diverse international team of authors representing 17 countries and a variety of disciplines Divided into two sections covering the Pleistocene and Holocene each section examines human migration through chapters that focus on different regional and disciplinary lenses Population Genetics in the Neotropics Marcos Vinícius Bohrer Monteiro

Siqueira, Enéas Ricardo Konzen, Pedro Manoel Galetti Junior, 2025-04-23 The Neotropics hold high levels of biodiversity figuring among the essential hotspots for conservation on Earth Invaluable genetic resources of this biogeographic dominion must deserve attention of conservationists as well as of breeders This project is aimed at producing a book on population genetics directed to an audience of undergraduate and graduate students but not limited to those In a distinct approach we seek to develop a material devoted to population genetics in the Neotropics contextualizing examples of several animal and plant species belonging to this highly diverse dominion Traditional books available in the subject of population genetics commonly deal with organisms that are native to North America and Europe while neotropical organisms are lacking in the context so our book comes forth as an initiative towards covering that Among several subjects this textbook addresses studies on molecular evolution and phylogenetics genetic structure at broad and fine spatial scales landscape genetics niche modeling and climate change conservation genetics and quantitative variation and its genetic components in hotspots of biodiversity such as the Amazon the Brazilian Savanna and the Atlantic Rain Forest It should provide an easy going reading with the main concepts being presented and contextualized within the Neotropical dynamics of plants and animal populations Basic mathematical foundations of population genetics theory are provided but no further details on deductions and advanced algebra are given for the purpose of simplicity The application of the studies on conservation and breeding is also addressed The chapters were planned to be brief describing the main concepts processes and case studies Invited authors

were encouraged to describe examples from their own research in the Neotropics Altogether this project may offer students with a textbook with concepts and ideas of the Neotropical genetic diversity bringing awareness and stimulating endeavors towards the continuance of conservation of endangered species in their environments of origin Prehistoric Europe

Andrew Jones,2008-11-10 Prehistoric Europe Theory and Practice provides a comprehensive introduction to the range of critical contemporary thinking in the study of European prehistory Presents essays by some of the most dynamic researchers and leading European scholars in the field today Ranges from the Neolithic period to the early stages of the Iron Age and from Ireland and Scandinavia to the Urals and the Iberian Peninsula **The Cambridge World History: Volume 2, A**

**World with Agriculture, 12,000 BCE-500 CE** Graeme Barker,Candice Goucher,2015-04-16 The development of agriculture has often been described as the most important change in all of human history Volume 2 of the Cambridge World History series explores the origins and impact of agriculture and agricultural communities and also discusses issues associated with pastoralism and hunter fisher gatherer economies To capture the patterns of this key change across the globe the volume uses an expanded timeframe from 12 000 BCE 500 CE beginning with the Neolithic and continuing into later periods Scholars from a range of disciplines including archaeology historical linguistics biology anthropology and history trace common developments in the more complex social structures and cultural forms that agriculture enabled such as sedentary villages and more elaborate foodways and then present a series of regional overviews accompanied by detailed case studies from many different parts of the world including Southwest Asia South Asia China Japan Southeast Asia and the Pacific sub Saharan Africa the Americas and Europe *Archaeology and the Genetic Revolution in European Prehistory* Kristian Kristiansen,2022-08-18 This Element was written to meet the theoretical and methodological challenge raised by the third science revolution and its implications for how to study and interpret European prehistory The first section is therefore devoted to a historical and theoretical discussion of how to practice interdisciplinarity in this new age and following from that how to define some crucial but undertheorized categories such as culture ethnicity and various forms of migration The author thus integrates the new results from archaeogenetics into an archaeological frame of reference to produce a new and theoretically informed historical narrative one that also invites debate but also one that identifies areas of uncertainty where more research is needed **Demography: Analysis and Synthesis, Four Volume Set** Graziella Caselli,Jacques

Vallin,Guillaume Wunsch,2006-01-03 This four volume collection of over 140 original chapters covers virtually everything of interest to demographers sociologists and others Over 100 authors present population subjects in ways that provoke thinking and lead to the creation of new perspectives not just facts and equations to be memorized The articles follow a theory methods applications approach and so offer a kind of one stop shop that is well suited for students and professors who need non technical summaries such as political scientists public affairs specialists and others Unlike shorter handbooks Demography Analysis and Synthesis offers a long overdue thorough treatment of the field Choosing the analytical method

that fits the data and the situation requires insights that the authors and editors of *Demography Analysis and Synthesis* have explored and developed. This extended examination of demographic tools not only seeks to explain the analytical tools themselves but also the relationships between general population dynamics and their natural economic, social, political, and cultural environments. Limiting themselves to human populations only, the authors and editors cover subjects that range from the core building blocks of population change (fertility, mortality, and migration) to the consequences of demographic changes in the biological and health fields, population theories and doctrines, observation systems, and the teaching of demography. The international perspectives brought to these subjects is vital for those who want an unbiased, rounded overview of these complex, multifaceted subjects.

Topics to be covered:

- Population Dynamics and the Relationship Between Population Growth and Structure
- The Determinants of Fertility
- The Determinants of Mortality
- The Determinants of Migration
- Historical and Geographical Determinants of Population
- The Effects of Population on Health
- Economics
- Culture and the Environment
- Population Policies
- Data Collection Methods
- Teaching about Population Studies

All chapters share a common format. Each chapter features several cross references to other chapters. Tables, charts, and other non-text features are widespread. Each chapter contains at least 30 bibliographic citations.

**Human Evolutionary Genetics** Mark Jobling, Matthew Hurles, Chris Tyler-Smith, 2013-06-25. *Human Evolutionary Genetics* is a groundbreaking text which for the first time brings together molecular genetics and genomics to the study of the origins and movements of human populations. Starting with an overview of molecular genomics for the non-specialist, which can be a useful review for those with a more genetic background, the book shows how data from the post-genomic era can be used to examine human origins and the human colonization of the planet, richly illustrated with genetic trees and global maps. For the first time in a textbook, the authors outline how genetic data and the understanding of our origins, which emerges, can be applied to contemporary population analyses, including genealogies, forensics, and medicine.

*Anthropological Genetics* Michael H. Crawford, 2007. Volume detailing the effects of the molecular revolution on anthropological genetics and how it redefined the field.

[Simulating Transitions to Agriculture in Prehistory](#) Salvador Pardo-Gordó, Sean Bergin, 2022-01-24. This book highlights new and innovative approaches to archaeological research using computational modeling while focusing on the Neolithic transition around the world. The transformative effect of the spread and adoption of agriculture in prehistory cannot be overstated. Consequently, archaeologists have often focused their research on this transition, hoping to understand both the ecological causes and impacts of this shift as well as the social motivations and constraints involved. Given the complex interplay of socio-ecological factors, the answers to these types of questions cannot be found using traditional archaeological methods alone. Computational modeling techniques have emerged as an effective approach for better understanding prehistoric data sets and the linkages between social and ecological factors at play during periods of subsistence change. Such techniques include agent-based modeling, Bayesian modeling, GIS modeling of the prehistoric environment, and the modeling of small-scale

agriculture As more archaeological data sets aggregate regarding the transition to agriculture researchers are often left with few ways to relate these sets to one another Computational modeling techniques such as those described above represent a critical next step in providing archaeological analyses that are important for understanding human prehistory around the world Given its scope this book will appeal to the many interdisciplinary scientists and researchers whose work involves archaeology and computational social science Chapter The Spread of Agriculture Quantitative Laws in Prehistory is available open access under a Creative Commons Attribution 4.0 International License via [springer.com](https://www.springer.com)

**Integrating Qualitative and Social Science Factors in Archaeological Modelling** Mehdi Saqalli, Marc Vander Linden, 2019-07-04 This book covers the methodological epistemological and practical issues of integrating qualitative and socio anthropological factors into archaeological modeling This text fills the gap between conceptual modeling which usually relies on narratives describing the life of a past community and formalized computer based modeling which are usually environmentally determined Methods combining both environmental and social issues through niche and agent based modeling are presented These methods help to translate data from paleo environmental and archaeological society life cycles such as climate and landscape changes into the local spatial scale The epistemological discussions will appeal to readers as well as the resilience socio anthropological factors provide facing climatic fluctuations Integrating Qualitative and Social Science Factors in Archaeological Modelling will appeal to students and researchers in the field

**Who We Are and How We Got Here** David Reich, 2019-02-05 A groundbreaking book about how ancient DNA has profoundly changed our understanding of human history Geneticists like David Reich have made astounding advances in the field of genomics which is proving to be as important as archeology linguistics and written records as a means to understand our ancestry In Who We Are and How We Got Here Reich allows readers to discover how the human genome provides not only all the information a human embryo needs to develop but also the hidden story of our species Reich delves into how the genomic revolution is transforming our understanding of modern humans and how DNA studies reveal deep inequalities among different populations between the sexes and among individuals Provocatively Reich's book suggests that there might very well be biological differences among human populations but that these differences are unlikely to conform to common stereotypes Drawing upon revolutionary findings and unparalleled scientific studies Who We Are and How We Got Here is a captivating glimpse into humankind where we came from and what that says about our lives today

**6000 BC** Peter F. Biehl, Eva Rosenstock, 2022-05-05 This book presents a comprehensive review of archaeological and environmental data between Syria and the Balkans around 6000 BC

**Colonisation, Migration, and Marginal Areas** Mariana Mondini, Sebastián Muñoz, Stephen Wickler, 2017-01-23 Human migration tends to involve more than the odd suitcase or two we often carry other organisms on our travels some are deliberately transported others move by accident This volume of 12 papers offers a zooarchaeological approach to questions surrounding the nature and extent of human colonization and migration and the adaptation of humans to new and sometimes

extreme or challenging environments The volume is divided into two parts Part 1 takes up the theme of Human and Animal Migration and Colonisation Contributors consider the relationship between human movements and the movements of animals and animal products case studies look at Neolithic population movements in Oceania the Norse colonization of Greenland and the European settlement of Virginia Part 2 focuses on the topic of Behavioural Variability in the So Called Marginal Areas Contributors offer various interpretations of the concept of marginality from climatic extremes of the Arctic cold and the heat and aridity of western North America to the geographical remoteness of Patagonia and the cultural circumstances surrounding the beginnings of transhumant pastoralism in prehistoric southeastern Europe

A History of Energy Bent Sorensen, 2013-02-28 In this seminal book Bent Sorensen views

human society as driven by the quest for and control of energy From allowing our prehistoric ancestors to survive harsh northern European winters to more recent global energy security and climate concerns the control and effective harnessing of energy sources has played a central role in human development Using the written and archaeological record and from earlier times inferring the energy needs of humans through modeling of climatological conditions and other indirect parameters S rensen unwraps this previously little explored field Based on detailed studies of northern Europe and in particular the case of Denmark the focus moves from the stone age through the development of agriculture and trade migration and exploration medieval society and the renaissance into industrial times and present day debates around the transition to low carbon forms of energy supply This riveting examination of a nascent field of study provides a new perspective for historians and those wishing to gain a deeper understanding of the background to present day energy debates

**Global Life Systems** Robert P. Clark, 2000 Humans did not begin as a global species we had to expand to become one And we could not have done so without other living organisms becoming global along with us Robert P Clark develops in this book a global life systems perspective that delineates how biological forces mutually reinforce one another and what their globalization has meant for both human society and the biosphere While he resists biological determinism Clark traces interconnected developments among population disease agriculture trade fuels and other life systems to more thoroughly explore and elucidate the globalization of human endeavors within an ever evolving context of nature and environment His lucid and richly documented book offers a fresh look at social evolution and a broader basis for understanding the contemporary context for global change
