Abstract—ABET accreditation is a rigorous and demanding process that requires substantial institutional effort when evaluating engineering and technology programs. This evaluation process comprises numerous intricate and time-consuming steps, often demanding years of prior experience. This study aims to explore the potential of artificial intelligence tools, particularly ChatGPT, in enhancing the efficiency of ABET accreditation preparation. The authors conducted a series of experiments to assess the applicability of this tool across various stages of the ABET accreditation process. These stages included comprehending ABET procedures, assisting in the compilation and editing of ABET documentation, providing proactive suggestions, conducting diagnostic reviews of the due process response, generating action plans to address accreditation deficiencies, and proposing training plans for specific ABET criteria. The outcomes of these preliminary investigations demonstrated that leveraging artificial intelligence tools can significantly enhance the quality and efficiency of ABET accreditation preparation. However, it is crucial to acknowledge that incorporating AI tools in the accreditation process raises concerns about data security, and these considerations must be duly addressed.

I. INTRODUCTION

A. Challenges in ABET Accreditation

Figure 1 shows the ABET accreditation process and its structured timeline [1]. In January to July, an institution submits a Self-Study report to initiate the accreditation request for an engineering or technology program. From May to July, ABET determines the visit date for the campus evaluation. The campus visit takes place between September and December, during which ABET prepares a draft statement based on the institution's 7-day response immediately after the visit. In February to April, the institution provides a 30-day response (Due Process) to the draft statement. Finally, in August, ABET notifies the institution of the accreditation decision. This process ensures a thorough evaluation and decision-making process to uphold the quality and standards of engineering and technology programs [2]–[6].

Meeting ABET criteria requires significant effort and resources to collect and compile data about an engineering or technology program, including curriculum development, faculty qualifications, assessment processes, and continuous improvement initiatives [7], [8]. The accreditation process involves extensive documentation, including self-study reports, curriculum maps, assessment data, faculty qualifications, and more [9]. The major challenges in preparing for ABET accreditation include [10]–[14]:

Modeling and Simulation in Python Jason M. Kinser, 2022-05-16 The use of Python as a powerful computational tool is expanding with great strides Python is a language which is easy to use and the libraries of tools provides it with efficient versatility As the tools continue to expand users can create insightful models and simulations While the tools offer an easy method to create a pipeline such constructions are not guaranteed to provide correct results A lot of things can go wrong when building a simulation deviously so Users need to understand more than just how to build a process pipeline Modeling and Simulation in Python introduces fundamental computational modeling techniques that are used in a variety of science and engineering disciplines It emphasizes algorithmic thinking skills using different computational environments and includes a number of interesting examples including Shakespeare movie databases virus spread and Chess Key Features Several theories and applications are provided each with working Python scripts All Python functions written for this book are archived on GitHub Readers do not have to be Python experts but a working knowledge of the language is required Students who want to know more about the foundations of modeling and simulation will find this an educational and foundational resource Decisions and Reports United States.
