Recognition of Underwater Sounds ,1946 *Recognition of Underwater Sounds* OFFICE OF SCIENTIFIC RESEARCH AND DEVELOPMENT WASHINGTON DC.,1946 **Recognition of Underwater Sounds** United States. Office of Scientific Research and Development. National Defense Research Committee,Lyman Spitzer,1946 International Regulation of Underwater Sound Elena McCarthy,2007-05-08 Numerous incidents suggest that man made sound injures and can kill marine mammals This book offers an objective look at how ocean noise should be addressed given the lack of regulatory structure and the scientific uncertainty over the effects of noise on marine life It is an essential text for policymakers governments and NGOs biologists environmental activists oceanographers and those in the shipping engineering and offshore oil and gas industries *Principles and Applications of Underwater Sound, Originally Issued as Summary Technical Report of Division 6, NDRC, Vol. 7, 1946, Reprinted...1968* United States. Getty,James H. Howard, Jr.,2017-03-31 The systematic scientific investigation of human perception began over 130 years ago yet relatively little is known about how we identify complex patterns A major reason for this is that historically most perceptual research focused on the more basic processes involved in the detection and discrimination of simple stimuli This work progressed in a connectionist fashion attempting to clarify fundamental mechanisms in depth before addressing the more complex problems of pattern recognition and classification This extensive and impressive research effort built a firm basis from which to speculate about these issues What seemed lacking however was an overall characterization of the recognition problem a broad theoretical structure to direct future research in this area Consequently our primary objective in this volume originally published in 1981 was not only to review existing contributions to our understanding of classification and recognition but to project fruitful areas and directions for future research as well The book covers four areas complex visual patterns complex auditory patterns multi dimensional perceptual spaces theoretical pattern recognition DDC Retrieval and Indexing Terminology Defense Documentation Center (U.S.),1975 **Advances in Noise Reduction and Feature Extraction of Acoustic Signal** Govind Vashishtha,Rajesh Kumar,2023-10-11 Acoustic signal is one of the hot topics of research in physics and has been studied by many engineers and scientists in various real world fields including underwater acoustics architectural acoustics engineering acoustics physical acoustics environmental acoustics psychological

acoustics and so on Noise reduction is the foundation of acoustic signal pre processing and the feature extraction for noise reduction signals can obtain useful information from the acoustic signal which is the linchpin for pattern recognition target detection tracking and localization Principles of Underwater Sound University of California (1868-1952). Division of War Research. Sonar Data Division, California. University. Division of War Research. Sonar Data Division, 1946 **Ocean Observation based on Underwater Acoustic Technology, volume II** Xuebo Zhang, Haixin Sun, Arata Kaneko, Suleman Mazhar, 2024-12-02 Since the sound wave is the only information carrier that can propagate long distances in the ocean underwater acoustic technology based on sound waves undoubtedly plays an important role in ocean observation The development of underwater acoustic technology requires the support of various underwater acoustic sensors and signal processing techniques The function of an underwater acoustic sensor is to conduct the conversion between an underwater acoustic signal and an electric signal Their performance directly determines the quality of underwater acoustic equipment However the harsh environment such as high pressure high temperature and highly corrosive fluids as well as different requirements such as low frequency broad bandwidth high power and deep water often affect the physical properties of materials and structural performance of transducers which deteriorates the transducer performance Due to the lack of comprehensive research on key techniques including material physical properties and interfacial bond properties the reliability of structural components is often seriously affected by environmental conditions which may lead to major performance degradation or even failure with the device performance Therefore it is challenging for the transducer design to balance the acoustic performance and the device's stability NBS Monograph United States. National Bureau of Standards, 1970 **Advances in Sound Localization** Pawel Strumillo, 2011-04-11 Sound source localization is an important research field that has attracted researchers' efforts from many technical and biomedical sciences Sound source localization SSL is defined as the determination of the direction from a receiver but also includes the distance from it Because of the wave nature of sound propagation phenomena such as refraction diffraction diffusion reflection reverberation and interference occur The wide spectrum of sound frequencies that range from infrasounds through acoustic sounds to ultrasounds also introduces difficulties as different spectrum components have different penetration properties through the medium Consequently SSL is a complex computation problem and development of robust sound localization techniques calls for different approaches including multisensor schemes null steering beamforming and time difference arrival techniques The book offers a rich source of valuable material on advances on SSL techniques and their applications that should appeal to researchers representing diverse engineering and scientific disciplines **Ocean observation based on underwater acoustic technology** Xuebo Zhang, Haixin Sun, Arata Kaneko, 2023-07-04 **Undersea Warfare (unclassified Title)** Defense Documentation Center (U.S.), 1961 **Proceedings of 2022 International Conference on Autonomous Unmanned Systems (ICAUS 2022)** Wenxing Fu, Mancang Gu, Yifeng Niu, 2023-03-10 This book includes original peer

reviewed research papers from the ICAUS 2022 which offers a unique and interesting platform for scientists engineers and practitioners throughout the world to present and share their most recent research and innovative ideas The aim of the ICAUS 2022 is to stimulate researchers active in the areas pertinent to intelligent unmanned systems The topics covered include but are not limited to Unmanned Aerial Ground Surface Underwater Systems Robotic Autonomous Control Navigation and Positioning Architecture Energy and Task Planning and Effectiveness Evaluation Technologies Artificial Intelligence Algorithm Bionic Technology and Its Application in Unmanned Systems The papers showcased here share the latest findings on Unmanned Systems Robotics Automation Intelligent Systems Control Systems Integrated Networks Modeling and Simulation It makes the book a valuable asset for researchers engineers and university students alike
