**The Complement System** Janos Szebeni, 2007-05-08

As a phylogenetically old system complement is now regarded as a part of innate immunity. But it is much more than that. It bridges innate and adaptive immunity, participates not only in host defense but also in many essential physiological processes. Old and new diseases and adverse conditions. Indeed complement became a term that almost defies categorization. What was for a long time a subject for a limited number of specialists has now moved into the mainstream of experimental and clinical immunology. In 1973 I visited the Basel Institute of Immunology and met its director, the eminent scientist and Nobel laureate Nils Jerne. When I entered his office he greeted me with the following words: Complement does that really exist? I was never certain whether he wanted only to tease me or whether he sincerely believed that the complement system was an unimportant biological curiosity, a misstep of evolution. But of course missteps do not survive the evolutionary process. Little did I foresee the dramatic developments of recent years when Hans J. Mller Eberhard and I started to unravel the specifics of the action of the cobra venom factor on the complement system in 1968 and defined a new pathway to its activation. An elucidation of the role of the system in diseases and its control for therapeutic reasons is now getting closer to actual realization in the clinic although many problems in particular those of highly specific inhibition free of side effects have still to be resolved.

Principles of Molecular Medicine Marschall S.
