Porter, Norma H. Hatcher, Ann M. Willey, 2013-09-03 *Perinatal Genetics Diagnosis and Treatment* brings together the proceedings of the 15 Annual New York State Health Department Birth Defects Symposium held on September 30 October 1 1984 in Albany New York The symposium provided a forum for clarifying and rationalizing certain aspects of diagnosis and treatment of perinatal genetic birth defects such as fragile X syndrome phenylketonuria and hypothyroidism Comprised of 17 chapters this book begins with an epidemiological review of very early pregnancy loss focusing on fertilization and implantation the probability of loss between fertilization and implantation on about the sixth day and between implantation and the 14th day the first day of the expected next period in a non pregnant woman and the contribution of chromosomal errors in the sperm ovum and zygote to early reproductive loss The reader is then introduced to cytogenetic abnormalities in spontaneous abortions of recognized conceptions repetitive spontaneous abortion and prenatal genetic diagnosis by chorionic villus sampling Subsequent chapters explore prenatal treatment of biochemical disorders in vitro fertilization and embryo transfer and moral issues concerning third trimester pregnancy terminations This monograph will appeal to perinatologists neonatologists obstetricians pediatricians and geneticists and should also serve as a useful guide for health professionals who provide care to pregnant women and their newborns **Index of Conference Proceedings Received** British Library. Lending Division, 1984-07 **Cumulated Index Medicus**, 1976 **Double Helix, Double Joy** Carolyn Rasmussen, Alister Danks, 2012-11-29 Professor David Danks explained in a public lecture revealingly titled *Double Helix Double Joy* that Even from its infancy it was apparent that the double helix was going to change not only science but also the community's image of science *Double Joy* conveyed his sense that the developments cascading from Watson and Crick's initial DNA discovery would yield immense benefits for people generally and also for his own research ambitions A double joy made concrete in the foundation of the Murdoch Institute for Research into Birth Defects where he could fully implement his vision of unfettered basic scientific research wedded to clinical practice and services to public health Born into the long established Melbourne family of hardware merchants Danks chose a career path more aligned to that family's association with hospitals and health Inspired to know why a disease had occurred and how it could be anticipated and prevented Danks trained with pioneers of human genetics in London and Baltimore from 1959 At that time human genetics was scarcely known in Australia Following his discovery of the cause of

Menkes disease in 1972 and breakthroughs in PKU testing he applied his entrepreneurial flair to the development of a brilliant multi disciplinary research team focussed on the identification of genetic diseases affecting newborns and their treatment in the clinic Dame Elisabeth Murdoch embraced his vision and helped launch the Murdoch Institute in 1986 based at the Royal Children s Hospital A man of towering intellect who did it because it was fun Danks legacy reaches beyond the Murdoch Institute to the establishment of clinical genetics services throughout Australia the internationally acclaimed POSSUM database and the next generation of researchers who continue to explore and expand his vision

Dr Oliver Wendell Holmes was once asked When should the training of a child commence A hundred years before birth was the reply Indeed it is this perspective on life through posterity that underlies the maturing field of international health embracing as it does a responsibility for and an awareness of the needs of all peoples The concepts of international health are increasingly revitalizing modern medicine as it attempts to relieve mankind of the burden of disease Curative medicine once the paradigm took a relatively beneficial approach to treatment But epidemiological recognition of the frequency of disease on a global basis and an appreciation of the vast number of those afflicted evoked a humiliating backlash of awareness that curative medicine alone neither constrains disease nor permanently advances human health happiness or longevity The growing reliance on truly international health strategies by national and international agencies including the more definite and extended practice of preventive medicine has provided the means to achieve significant gains in the quality of health in years to come A redeeming feature of contemporary failures in science and medicine is that once intelligently studied analyzed and evaluated even these failed efforts may provide real insights that can mold our capacity and determination So it is that more than in any bygone age the past ten years have seen the implementation of a sound and systematic infrastructure for international health undertakings thus paving the way for improved health for all
