Settersten Jr., Megan M. McClelland, 2018-10-18 If you had just one wish for the study of human development what would it be How would it advance the field And what would it take for your vision to be realized This was the charge given to twenty eight scholars coming from different disciplines and fields and who study different periods of the life course This book compiles provocative contributions from a wide range of established scholars organized into seven thematic areas conceptual advances systems levels and contexts individual differences methodological advances harnessing science for human welfare and social justice underexplored life course dynamics and interdisciplinary collaboration and playing well with others This book was originally published as a special issue of Research in Human Development *The Guided Mind* Jaan Valsiner, 1998 How is something as broad and complex as a personality organized What makes up a satisfactory theory of personality In this ambitious book Jaan Valsiner argues for a theoretical integration of two long standing approaches the individualistic tradition of personalistic psychology typified by the work of William Stern and Gordon Allport and the semiotic tradition of cultural historical psychology typified by the work of L S Vygotsky The two are brought together in Valsiner s theory which highlights the sign constructing and sign using nature of all distinctively human psychological processes Arguing that the individualistic and the cultural traditions differ largely in emphasis Valsiner unites them by focusing on the intricate relations between personality and its social context and their interplay in personality development The semiotic devices internalized from the social environment shape an individual s development and the flow of thinking feeling and acting Valsiner uses this theoretical approach to illuminate two remarkable and remarkably different phenomena letters from the mother of Allport s college roommate a key empirical case in Allport s theory and the ritual movements of a Hindu temple dancer Valsiner shows how both exemplify basic human tendencies for the cultural construction of life courses The Guided Mind shows the fundamental unities in the vastly diverse phenomenon of human personality *Lev Vygotsky* René van der Veer, 2007-11-15 Lev Vygotsky the great Russian psychologist had a profound influence on educational thought His work on the perception of art cultural historical theory of the mind and the zone of proximal development all had an impact on modern education This text provides a succinct critical account of Vygotsky s life and work against the background of the political events and social turmoil of that time and analyses his cross cultural research and the application of his ideas to contemporary education Ren van der Veer offers his own interpretation of Vygotsky as both the man and anti man of educational philosophy concluding that the strength of Vygotsky s legacy lies in its unfinished open nature Literacy Research Methodologies, Third Edition Marla H. Piaget Vygotsky Anastasia Tryphon, Jacques Vonèche, 2013-11-12 This book is the outcome of a long and passionate debate among world experts about two of the most pivotal figures of psychology Jean Piaget and Lev Vygotsky The occasion was a week long advanced course held at the Jean Piaget Archives in Geneva The most interesting outcome of the meeting is that in spite of differences in aims and scopes epistemogenesis versus psychogenesis in units of analysis events versus action and in social contents Swiss capitalism versus Soviet communism both Piaget and Vygotsky reached a similar conclusion knowledge is constructed within a specific material and social context Moreover their views complement each other perfectly where Vygotsky insists on varieties of psychological experiences Piaget shows how out of diversity grows universality so much so that the most communist of the two is not necessarily the one who was so labelled This book is not only of interest to developmental social and learning psychologists but also deals with issues pertinent to education epistemology language thought and cognition anthropology and philosophy It is likely to shed some light on the state of affairs in psychology for the general reader too because it is clear and precise straightforward and uses virtually no jargon

Vygotsky's theories even beyond the frame of psychology turns out to be fruitful I hope that this new book by Dorothy Robbins will help readers understand the deeper meaning of the scientific academic research undertaken by my father and the scientific results that were obtained by him

The Observation of Human Systems Joshua W. Clegg, 2017-12-02

Contemporary mainstream psychology has moved toward methodological specificity bounded by instrumental experimentalism However this institutional reduction of sanctioned methods has not been fully embraced by all social scientists nor even by all experimental psychologists The social sciences are rife with examples of practicing empirical scientists disaffected with the reductionism and atomism of traditional experimentalism The empirical theory and practice of four of these disaffected social scientists Lev Vygotsky James Baldwin James Gibson and Kurt Lewin is explored in this volume Each of the scientists considered here argued for a rigorously empirical method while still maintaining a clear anti reductionist stance They justified their disaffection with the dominant psychological paradigms of their respective eras in terms of a fidelity to their phenomena of study a fidelity they believed would be compromised by radical reductionism and ontological atomism The authors in this collection explore the theory and practice of these eminent researchers and from it find inspiration for contemporary social science The primary argument running through these analyses is that the social sciences should take seriously the notion of holistic empirical investigation This means among other things re establishing the indissoluble ties between theory method and procedure and resisting the manualization of research procedures It also means developing theories of relations and not simply of elemental properties Such theories would concern particular units fields or systems of relations and not be reduced to or interpreted in the terms of other systems Finally a holistic social science requires integration of the active agent into theory method and procedure an integration that points toward both participatory and emancipatory methods

Clinical Methods in Transcultural Psychiatry Samuel O. Okpaku, 1998 As the international community shrinks into a global village cultures mix meld and blur presenting psychiatric professionals with new challenges a growing number of patients of different nationalities ethnicities and backgrounds These sociocultural identities so integral to personality must be recognized and taken into account when

diagnosing and treating mental illness This is the premise behind transcultural psychiatry On the leading edge of an emerging discipline this compendium by respected clinicians from around the world is one of the first books to offer an in depth look at transcultural psychiatry Concise yet comprehensive Clinical Methods in Transcultural Psychiatry draws on a wealth of case studies and relevant clinical experience to provide practicing clinicians with a basic foundation of culturally informed psychiatry on which they can build Logically organized into six sections the book begins with an overview of transcultural psychiatry and then moves to the important topic of cultural psychiatry and mental health services Treatment approaches are addressed next followed by highlights of recent research special topics such as how religious and supernatural beliefs affect behavior and discussions and recommendations on education and training in transcultural psychiatry The final section emphasizes families in cultural transition focusing on the needs of women and children Although transcultural psychiatry has never been more relevant than today most psychiatric textbooks only briefly address it This fascinating work covering everything from the impact of magic and religion in Italy to class culture and religion in London s inner city familiarizes readers with the principles and practices of transcultural psychiatry focusing on the significance of cultural factors in the causes and meanings behind the pain and suffering as well as the healing of mental illness **The Production of Knowledge** Colin Elman, John Gerring, James Mahoney, 2020-03-19 A wide ranging discussion of factors that impede the cumulation of knowledge in the social sciences including problems of transparency replication and reliability Rather than focusing on individual studies or methods this book examines how collective institutions and practices have often unintended impacts on the production of knowledge How Emotions Work Jack Katz, 1999 The portrait that emerges is one in which people are much more sensually intimately and aesthetically bound up in the landscapes of their lives than previous scientific studies would suggest In fact Katz argues that emotions are most directly understood as transformations of the ongoing aesthetic foundations of the self **BOOK JACKET** Cultural Psychology and Qualitative Methodology Carl Ratner, 2013-03-09 Qualitative methodologies in cultural psychology often lack the objective and verifiable character of quantitative analysis Author Carl Ratner corrects this shortcoming by rigorously systematizing qualitative methods The book discusses for example means of systematizing such subjective reports as interviews letters and diaries which often yield valuable data that is not easily quantified Ratner argues that complex psychological phenomena are expressed through extended responses and hence are best studied by new more regularized qualitative methods that go beyond measuring simple overt responses Thinking in Psychological Science Jaan Valsiner, 2017-12-02 This book explores the development of ideas in psychology s past It is the initial volume in a series intended to shape such ideas into a valuable resource for the discipline s future Scientists in general are known to ignore their own history considering it to be a graveyard of failures In Thinking in Psychological Science selected ideas of key figures in the cognitive comparative and developmental sides of psychology Karl Duncker Karl Bihler Tamara Dembo Zing Young Kuo C Lloyd Morgan Alexander Chamberlain and Arnold

Gesell are traced and the social contexts of their ideas are given a collective analysis focusing on the potential of these ideas for the present state of psychology. Representing the scientist as hero has become a necessary component when applying for research monies from governmentally controlled funding agencies. Yet the reality is just the opposite. Science is not just the product of heroes; it is the product of many individuals who often search for solutions to basic problems throughout their lifetimes while only a few arrive at breakthroughs. Still, familiarity with the flow of thought in the efforts to solve the basic problems of humankind is necessary for any understanding of creativity. This book analyzes the processes involved in the search for solutions to major theoretical problems of development.

Kuo Gesell, action and cognition, Biihler, Bunker Dembo, and methodology, Morgan. Ultimately, this is an exciting volume that reveals real science in the making. Thinking in Psychological Science will be of interest to students of the social sciences and intellectual history. It is ideal for graduate and upper level undergraduate courses in psychology, the sociology of science, and cognitive science.

Second Language Research Alison Mackey, Susan M. Gass, 2013-06-17. Specifically targeted towards the needs of a second language research audience, *Second Language Research Methodology and Design* addresses basic issues related to research design, providing step by step instructions for how to carry out studies. This up to date text includes chapters that cover identifying research problems and questions, selecting elicitation measures, dealing with ethical issues related to data gathering, validity and reliability in research, research in second and foreign language classroom contexts, data description and coding, and data analysis. Also included is a chapter on the much needed and rarely addressed topic of writing up SLA research, giving concrete suggestions about preparing for publication. Principles of both qualitative and quantitative research are discussed in the context of design issues. Throughout the book, examples from applied linguistics, second language acquisition, and TESOL are provided. Helpful discussion and data based skill building exercises at the end of each chapter promote better understanding of the principles discussed. A glossary outlines the key terms in second language research.

Second Language Research Methodology and Design is an ideal textbook for introductory and advanced classes in second language research methods as well as classes in related areas, for example, TESOL research methods.
