## **Red Giants White Dwarfs:**

**Red Giants and White Dwarfs** Robert Jastrow, 1990 Presents discussions regarding the origin of the universe the life and death of stars and the origin of the earth and life     *Red Giants and White Dwarfs* Robert Jastrow, 1969     **Red Giants White Dwarf** Robert Jastrow, 1969-06-30     Red Giants and White Dwarfs Robert Jastrow, 1971 A scientific discussion of life on earth in the light of the origins of the solar system and the substances of the universe     **Evolution of Peculiar Red Giant Stars** International Astronomical Union. Colloquium, 1989-06-22 Red giant stars are evolutionarily advanced objects in the closing stages of their nuclear burning lifetime Observed with increasing spectral coverage they display a variety of unusual phenomena Many are characterized by peculiar non solar surface chemical compositions which provide otherwise unobtainable clues to interior nucleosynthesis mixing and evolution Others may have received their chemical peculiarities by mass transfer from a companion This book reports on the proceedings of the International Astronomical Union Colloquium 106 It contains discussions on many aspects of these stars combining theory and observation to interpret these objects in terms of their evolutionary history There are 20 review papers 69 abstracts and short contributed papers and a complete transcript of the valuable summary panel discussion Professional astronomers will find this book useful as a reference work which incorporates current research on the modelling and evolution of these unstable stars     **RED GIANTS AND WHITE DWARFS MANS DESCENT FORM THE STARS** ROBERT JASTROW, 1969     *Red giants and white dwarfs* Robert Jastrow, 1971     *Physical Processes in Red Giants* I. Iben, Alvio Renzini, 2012-12-06 In recent years it has become clear that the red giant phase is one of the most dramatic periods in a star s life when all of its parts become involved in ways that have both direct and indirect observational consequences This is most particularly true of low and intermediate mass stars during the second ascent of the giant branch Such stars bring to their surfaces products of nucleosynthesis currently taking place in their deep interiors they pulsate as Mira variables develop extended outward flowing atmospheres that may exhibit maser properties and shed great quantities of matter sometimes highly processed into the inter stellar medium The manner in which processed matter is brought to the surface is far from being completely explained and the precise mechanism or mechanisms whereby matter is ejected from the stellar surface whether by deposition of Alfvén waves radiation pressure on grains or as a consequence of some large scale envelope instability has yet to be elucidated to every one s satisfaction The purpose of the second workshop in Astrophysics organized by the Advanced School of Astronomy was to bring together experts on all the physical processes occurring in red giants in an effort to emphasize the interrelatedness of these individual processes and to encourage a dialogue among experts that might serve to initiate a synthesis or at least sharpen our understanding of the most important problems to address in the future     **UGC-NET/JRF/SET Teaching and Research Aptitude (General Paper – I)** Vikas Experts, Test Prep for UGC NET JRF SET Teaching and Research Aptitude     **Mass Loss from Red Giants** Mark Morris, Arie J. Zuckerman, 2012-12-06 Red giant and supergiant stars have long been favorites

of professional and amateur astronomers. These enormous stars emit up to 10 times more energy than the Sun and so are easy to study. Some of them, specifically the pulsating long period variables, significantly change their size, brightness, and color within about a year, a time scale of interest to a single human being. Some aspects of the study of red giant stars are similar to the study of pre-main sequence stars. For example, optical astronomy gives us a tantalizing glimpse of star-forming regions, but to really investigate young stars and protostars requires infrared and radio astronomy. The same is true of post-main sequence stars that are losing mass. Optical astronomers can measure the atomic component of winds from red giant stars that are undergoing mass loss at modest rates ( $6 \times 10^{-9} \text{ M}_{\odot} \text{ yr}^{-1}$ ). But to see dust grains and molecules properly, especially in stars with truly large mass loss rates ( $10^{-9} \text{ M}_{\odot} \text{ yr}^{-1}$ ), one requires IR and radio astronomy. As this stage of copious mass loss only lasts for 105 years, one might be tempted to ask who cares.

**Red Giants and White Dwarfs. Stars, Planets and Life: the Evolution of the Cosmos. With Illustrations, Including a Portrait.** Robert Jastrow, 1968 In Quest of the

Universe Theo Koupelis, 2010-02-04. Designed for the non-science major. In Quest of the Universe Sixth Edition is a comprehensive student-friendly introduction to astronomy. This accessible text guides readers through the development of historical and current astronomical theories to provide a clear account of how science works. Koupelis' distinct explanations acquaint students with their own solar system before moving on to the stars and distant galaxies. This flexible approach allows instructors to arrange the modules to fit their own course needs. With numerous interactive learning tools, the Starry Night planetary software package, and stunning visuals and up-to-date content, In Quest of the Universe Sixth Edition is an exciting overview of this ever-changing discipline.

**Bright Stars, Red Giants, and White Dwarfs** Melvin Berger, 1983. Describes the various stages in the birth, life, and death of stars and discusses theories about the ultimate future of our universe.

**Introducing the Stars** Martin Beech, 2019-03-28. This textbook introduces the reader to the basic concepts and equations that describe stellar structure. Various approximation techniques are used to solve equations, and an intuitive rather than rigorous approach is employed to interpret the properties of the stars. The book provides step-by-step instructions, helpful exercises, and relevant historical lessons to familiarize students with key concepts and mathematical theories. Based upon a series of one-semester, 12-week elective undergraduate courses offered at the University of Regina, this book is intended for students who are interested in seeing how basic calculus and introductory physics can be applied to the understanding of the stars from their formation to their death. The text provides an intermediate stepping stone between lower-level undergraduate classes and more specialized postgraduate texts on the subject of stellar structure.
