This volume of the Keio University International Symposia for Life Sciences and Medicine contains the proceedings of the 13th symposium held under the sponsorship of the Keio University Medical Science Fund. The fund was established by the generous donation of the late Dr. Mitsunada Sakaguchi. The Keio University International Symposia for Life Sciences and Medicine constitute one of the core activities sponsored by the fund, of which the objective is to contribute to the international community by developing human resources, promoting scientific knowledge and encouraging mutual exchange. Each year the Committee of the International Symposia for Life Sciences and Medicine selects the most significant symposium topics from applications received from the Keio medical community. The publication of the proceedings is intended to publicize and distribute the information arising from the lively discussions of the most exciting and current issues presented during the symposium. On behalf of the Committee, I am most grateful to the late Dr. Sakaguchi who made the series of symposia possible. We are also grateful to the prominent speakers for their contribution to this volume. In addition, we would like to acknowledge the efficient organizational work performed by the members of the program committee and the staff of the fund.

Microvascular Research: Biology and Pathology, Two-Volume Set David Shepro, 2005-11-03 The microvasculature refers to the smallest blood vessels, arterial and venous, that nurture the tissues of each organ. Apart from transport, they also contribute to the systematic regulation of the body. In everyday terminology, the microcirculation is where the action is. Microcirculation is directly involved in such disease states as Alzheimer's, inflammation, tumor growth, diabetic retinopathy, and wound healing, plus cardiovascular fitness is directly related to the formation of new capillaries in large muscles. Microvascular Research is the first book devoted exclusively to this vital systemic component of the cardiovascular system and provides up-to-date mini reviews of normal functions and clinical states. The contributing authors are senior scientists with international reputation in their given disciplines. This two volume set is a broad interdisciplinary work that encompasses basic research and clinical applications equally. Broad coverage of both basic and clinical aspects of microvasculature research. Contains 167 chapters from over 300 international authors. Each chapter includes key figures and annotated references.

The author a pioneer of the field invented the first artificial cells some 50 years ago and has continued to carry out active research in this field. Since then there have been explosive research activities around the world on artificial cells especially in fields related to biotechnology nanomedicine cell therapy blood substitutes drug delivery and others. However instead of the term artificial cells many authors use other terminologies such as blood substitutes bioencapsulation liposomes nanoparticles and so on. Furthermore papers in this highly interdisciplinary area are published in numerous journals specializing in chemistry medicine surgery bioengineering and others while books in this area are mostly multi authored describing very specific and narrow areas. As a result any meaningful literature search for a complete idea of the present status of the whole field of artificial cells is impossible. This monograph is written to fill this gap by including all those areas in artificial cells that are disguised under different terminologies. Each chapter begins with a detailed overview followed by detailed examples of the author's own research and a full description of his methods and procedures. Readers interested in a detailed overview of the whole area can read from cover to cover omitting the methods section at the end of each chapter while those entering this area of research will find the detailed methods and procedures very useful.
