Early Russian Organic Chemists and Their Legacy David E. Lewis,2012-04-03 The organic chemists of Russia during the
pre revolutionary period included some of the most creative and talented chemists of the nineteenth and early twentieth
centuries Indeed this is attested by the number of reactions and empirical rules bearing their names This volume is of
interest for both historians of chemistry and organic chemists wishing to discover more about the historical development of
their discipline in Russia From the founding of the Russian Academy of Sciences by Peter the Great in 1725 to the early years
of the nineteenth century Russian organic chemistry was largely in the hands of foreign scientists However the Russification
of organic chemistry in Russia had begun before the middle of the nineteenth century and reached its zenith during the last
half of the same century by which time vibrant schools of chemistry had arisen in the eastern city of Kazan at Moscow and at
St Petersburg By the end of the century the Chairs of organic chemistry at universities throughout the Russian empire were
occupied by Russian chemists almost half of them trained at Kazan This volume discusses the contributions of these organic
chemists which include the structural theory of organic chemistry empirical rules for addition and elimination reactions
involving carbon nucleophiles such as the aldol reaction and alcohol synthesis using organozinc nucleophiles the discovery of
sulfoxides and sulfonium salts and a range of important redox reactions Russia's People of Empire Stephen M.
Norris,Willard Sunderland,2018-11-01 A fresh and lively approach to understanding how the various Russian empires have
worked Slavic Review A fundamental dimension of the Russian historical experience has been the diversity of its people and
cultures religions and languages landscapes and economies For six centuries this diversity was contained within the
sprawling territories of the Russian Empire and the Soviet Union and it persists today in the entwined states and societies of

the former USSR Russia's People of Empire explores this enduring multicultural world through life stories of 31 individuals famous and obscure high born and low men and women that illuminate the cross cultural exchanges at work from the late 1500s to post Soviet Russia Working on the scale of a single life these microhistories shed new light on the multicultural character of the Russian Empire which both shaped individuals lives and in turn was shaped by them Students of Russian empire would be well served with this work given its snapshots of diverse imperial milieus and their attendant multicultural dialogues at the personal level Slavic and East European Journal This compilation gives readers a more in depth personal understanding of how the inescapable existence of diversity in Russia and the Soviet Union related to everyday life Highly recommended Choice

Science in Russia and the Soviet Union Loren R. Igniting The Chemical Ring Of Fire: Historical Evolution Of The Chemical Communities Of The Pacific Rim Seth C Rasmussen, 2018-01-18

From the rise of chemical technology in antiquity to the present day Igniting the Chemical Ring of Fire tracks the development of professional chemistry communities in the countries of the Pacific Rim Critical in this process was the development of local education and training in chemistry The doctorate in chemistry is generally regarded as coming into existence in early 19th century Germany with the model spreading globally as time passed In early years it was common for international chemistry scholars to train at the ranking German or English universities before returning to their home countries to seed a local version of the doctorate However little has been formally written about this process outside of Europe Representing a first in the field for countries of the Pacific Rim this book documents the detailed history of chemical communities in ten countries from a team of internationally renowned historians Providing insights into how and when these countries initiated local chemistry PhD programs and became independent chemical entities Igniting the Chemical Ring of Fire shows that there is no single path to development
