Free-Radical-Induced DNA Damage and Its Repair Clemens Sonntag, 2006-03-20 The free radical chemistry of DNA had been discussed in some detail in 1987 in my book *The Chemical Basis of Radiation Biology* Obviously the more recent developments and the concomitant higher level of understanding of mechanistic details are missing Moreover in the living cell free radical DNA damage is not only induced by ionizing radiation but free radical induced DNA damage is a much more general phenomenon It was therefore felt that it is now timely to review our present knowledge of free radical induced DNA damage induced by all conceivable free radical generating sources Originally it had been thought to include also a very important aspect the repair of DNA damage by the cell's various repair enzymes Kevin Prise Cancer Campaign Gray Laboratory London was so kind to agree to write this part However an adequate description of this strongly expanding area would have exceeded the allocated space by much and this section had to be omitted The directors of the Max Planck Institut für Strahlenchemie now MPI für Bioanorganische Chemie Karl Wieghardt and Wolfgang Lubitz kindly allowed me to continue to use its facilities after my retirement in 2001 Notably our librarian Mrs Jutta Theurich and her right hand help Mrs Rosemarie Schreier were most helpful in getting hold of the literature I thank them very much Without their constant help this would have been very difficult indeed

Organic Mechanisms Reinhard Bruckner, 2010-04-30 Much of life can be understood in rational terms if expressed in the language of chemistry It is an international language a language without dialects a language for all time a language that explains where we came from what we are and where the physical world will allow us to go Chemical Language has great esthetic beauty and links the physical sciences to the biological sciences from The Two Cultures Chemistry and Biology by Arthur Kornberg Nobel Prize in Physiology and Medicine 1959 Over the past two centuries chemistry has evolved from a relatively pure disciplinary pursuit to a position of central importance in the physical and life sciences More generally it has provided the language and methodology that has unified integrated and indeed molecularized the sciences shaping our understanding of the molecular world and in so doing the direction development and destiny of scientific research The language of chemistry referred to by my former Stanford colleague is made up of atoms and bonds and their interactions It is a system of knowledge that allows us to understand structure and events at a molecular level and increasingly to use that understanding to create new knowledge and beneficial change The words on this page for example are detected by the eye in a series of events now generally understood at the molecular level Molecular Basis of Oxidative Stress Frederick A.
