Science Under Siege The Politicians War On Nature And Truth:

Science Under Siege Todd Wilkinson, 1998 Exposes how entrenched political interests beholden to industry lobbyists are waging an all out war to weaken key environmental laws and gut regulatory agencies and how deals are made giving private industry a profit at the public s expense Jacket **Science under siege** Peter Banks, Daniel Lunney, Chris Dickman, 2012-11-01 On Saturday 29 November 2008 the Royal Zoological Society of NSW held a forum with the theme of Science under siege As the RZS is a zoological society zoology under threat became the secondary theme and the basis for selecting speakers This book records that forum with the papers developed for this book as the written word from the spoken presentations Papers that were presented as posters are included as are the edited plenary sessions which featured questions from the floor with answers and comments encouraged from anyone in the forum We were delighted that Mark Horstman from ABC Catalyst was willing to replace his peripatetic colleague Paul Willis who was nonetheless very happy to write the foreword There is a place for such skilled science communicators we need more of them and scientists at the lab bench or in the field or exploring computer models or those that have now taken a job in the policy world need to stay in touch with them Some might say that the title Science under siege seems a bit extreme but we invite you to examine the evidence as presented in this book What follows is an edited version of the introductory material that advertised the forum The title looks dramatic but if you ask yourself is anything killing the science in your area of interest you might be surprised that you come up with a point or two Then ask a wider set of questions such as are there any pressures that preclude people from doing good zoology do either political budgetary constraints impact on your field is science in the media a subject that influences the outcome of your work are there economic impediments to careers in zoology is the education mix in Australia right for this new century are the best researchers becoming full time administrators or the converse the poor researchers becoming the administrators can you place the Australian situation in an international context are there reduced opportunities for human interactions with the natural world is the virtual world killing reality and what are your predictions of the future To deal with such issues the Royal Zoological Society of NSW has structured the day to emphasize a range of themes beginning with identifying the issues including those that are persistent and those that are emerging and encompassing palpable hits to science Direct and indirect hits to science include such matters as the withdrawal of funding subversion of science death by 1000 cuts redirection of funding to fashion issues and using the name of science to justify things that are really not justifiable The name of science is being dragged down We need to confront the ever present problem of ignoring the scientifically accurate for the politically correct This raises such questions as to whether basic skills in biology are not being acquired because of public concern based on extreme animal rights propaganda Good science is not optional but what can be done if you are under siege The answers include understanding the philosophy of science the legal perspective and asking what scientists are or should be doing Audience participation will be a central part of this forum The

plenary sessions will address questions raised by the speakers and the posters and debate issues and consider options for future directions It is widely known that it is hard to pull a major paper together on this theme but so many scientists know of at least one matter that they would like to draw to public attention So short contributions are included Listen to the speakers present some overarching themes or compelling case studies contribute to the debate on the day then examine your stance on a variety of these subjects to see whether the day changes your view of this often cryptic aspect of zoology As editors we wish to acknowledge the skills of the referees all papers were refereed by two peers and the patience of the authors for what has been a long gap between the date of the forum and this publication By the end of 2008 the Royal Zoological Society of NSW along with everyone else was caught by the GFC Global Financial Crisis and we simply had to extend the length of the queue for publication We also reassessed our mode of publication The Council of the Society voted to publish this production as an ebook as well as a short print run for formal library deposit and other essential matters The ebook is open access to enhance the reach of the papers and the ideas At the same time the Royal Zoological Society of NSW signed a contract for a more international mode of access of the publications of the Society and papers are now available via Metapress <http://rzsnsw.metapress.com> Science remains under siege in our view and now we have been alerted to the range of issues it becomes easier to spot the small irritating closing of options that collectively amount to a denial of science and its relegation to an optional way of looking at the world During production of this book this matter became obvious on a number of fronts which led us to invite the paper by Rosie Cooney and colleagues to defend their science of kangaroo conservation and commercial harvesting from an attack on the science We also saw that this issue of science under siege needs more airing and the Royal Zoological Society of NSW is planning its forum for the end of 2012 to take up another strand of this theme by capitalizing on the lifelong insights of scientists under the rubric of grumpy scientists an ecological conscience of a nation This idea in fact derives directly from the suggestions in the plenary sessions by Nick Holmes and Charley Krebs We are also concerned for young scientists with science under siege manifesting often in a failure to create permanent careers for science graduates that advance science itself and zoology in particular from flourishing and identifying problems and finding solutions If we want to conserve the native fauna of Australia then Australian zoologists will have to be key team members We contend that to put science under siege and zoology under threat we not only further imperil our native wildlife but also the careers of the small band of specialists that can see the issues find the problems implement solutions and evaluate the outcomes In short science under siege is not a light matter and no one in this forum thought so Read on form an opinion and speak up and publish your thoughts your examples and your solutions

Science and Politics Brent S. Steel, 2014-04-21

Recent partisan squabbles over science in the news are indicative of a larger tendency for scientific research and practice to get entangled in major ideological divisions in the public arena This politicization of science is deepened by the key role government funding plays in scientific research and development the market leading position of U S based science and technology firms and

controversial U S exports such as genetically modified foods or hormone injected livestock This groundbreaking one volume A to Z reference features 120 150 entries that explore the nexus of politics and science both in the United States and in U S interactions with other nations The essays each by experts in their fields examine Health environmental and social cultural issues relating to science and politics Concerns relating to government regulation and its impact on the practice of science Key historical and contemporary events that have shaped our contemporary view of how science and politics intersect Science and Politics An A to Z Guide to Issues and Controversies is a must have resource for researchers and students who seek to deepen their understanding of the connection between science and politics *Science Under Siege* Todd Wilkinson,1998 Exposes how entrenched political interests beholden to industry lobbyists are waging an all out war to weaken key environmental laws and gut regulatory agencies and how deals are made giving private industry a profit at the public s expense Jacket **Nature and Bureaucracy** David Jenkins,2022-09-08 This book questions how bureaucracies conceive of and consequently interact with nature and suggests that our managed public landscapes are neither entirely managed nor entirely wild and offers several warnings about bureaucracies and bureaucratic mentality One prominent challenge facing scientists policymakers environmental activists and environmentally concerned citizens is to recognize that human influence in the natural world is pervasive and has a long history How we act or choose not to act today will continue to determine the future of the natural world Western style management of nature mediated by economic rationality and state bureaucracies may not be the best strategy to maintain environmental integrity The question is what kinds of human influence conceived of in the widest possible sense will produce ideal environments for future generations The related question is who gets to choose The author approaches the problem of analyzing the mutual influence of human and natural systems from two perspectives as an objective scholar investigating bureaucracies and natural systems from the outside and over the last decade as an inside practitioner working in various roles in federal land management agencies developing policies and regulations involved in the control of natural systems This book will be of great interest to students and scholars of natural resource management policy and politics and professionals working in environmental management roles as well as policymakers involved in public policy and administration **Defending Our Wildlife Heritage** Terry Grosz,2001 The author a special agent for the U S Fish and Wildlife Service discusses his activities investigating the smuggling of wildlife illegal commercialization of wildlife illegal take of wildlife and illegal commercialization of the parts and products of wildlife

Explorations in Ecocriticism Paul Lindholdt,2015-04-09 A chief innovation of Explorations in Ecocriticism is to push ecological criticism beyond its focus on literary studies to engage with other arts and culture One chapter closely examines the pictures commissioned by the U S Bureau of Reclamation to valorize its big dam projects Previously no one has written about the large art collection that toured the nation under the auspices of the Smithsonian in the early 1970s when the

Bureau of Reclamation was under fire and new environmental regulations were becoming law Another chapter An Iconography of Sabotage previously published in France as part of a Paris symposium looks at the pictorial dimension of saboteurs throughout American history with a special emphasis on the IWW and Earth First The book draws extensively on the social sciences Ecology and environment are treated too often as technical topics that go over the heads of lay readers Many Americans care about air and water quality the extinction of species and the unfortunate politicization of science But they also find the discourse daunting the details exceedingly complex By leavening such heavy subjects with current events Explorations in Ecocriticism makes environmental issues accessible to lay readers and offers routes to sustainability in the United States today

The Environment in Anthropology, Second Edition Nora Haenn, Allison Harnish, Richard Wilk, 2016-04-26 Presents ecology and current environmental studies from an anthropological point of view The Environment in Anthropology presents ecology and current environmental studies from an anthropological point of view From the classics to the most current scholarship this text connects the theory and practice in environment and anthropology providing readers with a strong intellectual foundation as well as offering practical tools for solving environmental problems Haenn Wilk and Harnish pose the most urgent questions of environmental protection How are environmental problems mediated by cultural values What are the environmental effects of urbanization When do environmentalists goals and actions conflict with those of indigenous peoples How can we assess the impact of environmentally correct businesses They also cover the fundamental topics of population growth large scale development biodiversity conservation sustainable environmental management indigenous groups consumption and globalization This revised edition addresses new topics such as water toxic waste neoliberalism environmental history environmental activism and REDD Reducing Emissions from Deforestation and Forest Degradation and it situates anthropology in the multi disciplinary field of environmental research It also offers readers a guide for developing their own plan for environmental action This volume offers an introduction to the breadth of ecological and environmental anthropology as well as to its historical trends and current developments Balancing landmark essays with cutting edge scholarship bridging theory and practice and offering suggestions for further reading and new directions for research The Environment in Anthropology continues to provide the ideal introduction to a burgeoning field

Forum for Applied Research and Public Policy, 2000

The Solution is You! Laurie David, 2006 Environmental activist Laurie David describes her own efforts to inform the American people about global warming and how it effects the planet

A Sword for Mother Nature Terry Grosz, 2002 Award winning author Terry Grosz whose career in conservation is matched by his skill as a storyteller revisits his rookie years as a fish and game warden for the State of California where his on the job training got him into some awful scrapes but the bad guys he chased almost always got into worse ones As a law enforcement agent he learned to sniff out trouble defuse tense situations and stay alive and as a human being he learned to temper justice with mercy and to treat everyone fairly Grosz s stories are action packed and driven by his passion to preserve our country s

wildlife whether he was working under the wing of a mentor fighting out from underfoot of the bureaucrats or stepping on the toes of corrupt and hypocritical politicians *A History of Environmental Politics Since 1945* Samuel P. Hays, 2000-10-15

Long before public life in America was enlivened with such dramatic sound bites as acid rain global warming rain forests and the ozone layer Samuel P Hays was well launched on his career of tracking this new phenomenon of environmental affairs His first foray a book on the early twentieth century conservation movement published in 1958 helped to launch environmental history as a field and his continued writings after coming to the University of Pittsburgh in 1960 helped to bring the field to full flower Now he has produced another volley which promises to continue to energize this growing and dynamic field of study *A History of Environmental Politics since 1945* Hays provides an overview of environmental politics during the last half century both its formative and its maturing years that will be useful to those who are actively engaged in environmental affairs and those who wish to watch and assess it from the sidelines His themes are both simple and diverse His overall focus is on the emergence of an environmental culture which has engaged millions of Americans in varied ways of thought and action on the one hand and the intense opposition to that drive on the other Hays explores a wide range of issues such as the role of nature in an urban society pollution and its causes and effects the impact of an ever increasing population and its voracious appetite to consume At the same time he follows these threads through science technology economics management the structure of politics and the results of policy *A History of Environmental Politics since 1945* provides an introduction to the subject for both the specialist and the lay audience the general public and the student It provides a high level of insight that will inform both those who are environmental experts and those who wish to take a first step at grasping the meaning of environmental affairs It constitutes a formative guide for a subject that promises to engage the nation ever more fully in the years to come **Herding Scientists** Andrew B. Whitford, 2022-05-12

When politicians reshape public health agencies scientists resist changes and if possible leave Those shifts make it harder for agencies to fight future public health threats This Element focuses on the tension between scientists and managerial control in the policy process both conceptually and empirically It centers on a failed attempt to reorganize the United States Centers for Disease Control and Prevention Because many of the gains in longevity and health quality result from the work of public health agencies public health scientists and practitioners are the frontline producers of public health *Roadless Rules* Tom Turner, 2010-04-14

Roadless Rules is a fast paced and insightful look at one of the most important wide ranging and controversial efforts to protect public forests ever undertaken in the United States The book offers a fascinating overview of the creation of the Clinton roadless rule and the Bush administration s subsequent replacement rule the controversy generated the response of the environmental community and the legal battles that continue to rage more than seven years later It explores the value of roadless areas and why the Clinton rule was so important to environmentalists describes the stakeholder groups involved and takes readers into courtrooms across the country to hear critical arguments Wilderness

Science in a Time of Change Conference ,2000 *The American West at Risk* Howard G. Wilshire, Jane E. Nielson, Richard W. Hazlett, 2008-06-05 The American West at Risk summarizes the dominant human generated environmental challenges facing the 11 contiguous arid western United States The importance of this story is that protecting lands and soil also protects air and water quality and water supplies which are critical support for our lives and our health

Responsible Genetics A. Nordgren, 2013-03-14 This book addresses well known issues the ethical legal and social implications of human genetics but does so from an unusual perspective the perspective of the scientific community itself In distinction to what is common in the ELSI literature the book also discusses bioethical method A new kind of casuistry is developed on the basis of the empirical findings of cognitive semantics It will be of interest to philosophers bioethicists geneticists and policymakers
