Natural Kinds and Classification in Scientific Practice Catherine Kendig, 2015-12-22 This edited volume of 13 new essays aims to turn past discussions of natural kinds on their head. Instead of presenting a metaphysical view of kinds based largely on an unempirical vantage point, it pursues questions of kindness which take the use of kinds and activities of kinding in practice as significant in the articulation of them as kinds. The book brings philosophical study of current and historical episodes and case studies from various scientific disciplines to bear on natural kinds as traditionally conceived of within metaphysics. Focusing on these practices reveals the different knowledge-producing activities of kinding and processes involved in natural kind use, generation and discovery. Specialists in their field, the esteemed group of contributors use diverse empirically responsive approaches to explore the nature of kindhood. This groundbreaking volume presents detailed case studies that exemplify kinding in use. Newly written for this volume, each chapter engages with the activities of kinding across a variety of disciplines. Chapter topics include the nature of kinds, kindhood, kinding and kind-making in linguistics, chemical classification, neuroscience, gene and protein classification, colour theory in applied mathematics, homology in comparative biology, sex and gender identity theory, memory research, race, extended cognition, symbolic algebra, cartography and geographic information science. The volume seeks to open up an as yet unexplored area within the emerging field of philosophy of science in practice and constitutes a valuable addition to the disciplines of philosophy and history of science, technology, engineering and mathematics.

Introduction to High Performance Scientific Computing David L. Chopp, 2019-03-01 Based on a course developed by the author, *Introduction to High Performance Scientific Computing* introduces methods for adding parallelism to numerical methods for solving differential equations. It contains exercises and programming projects that facilitate learning as well as examples and discussions based on the C programming language with additional comments for those already familiar with C. The text provides an overview of concepts and algorithmic techniques for modern scientific computing and is divided into six self-contained parts that can be assembled in any order to create an introductory course using available computer hardware. Part I introduces the C programming language for those not already familiar with programming in a compiled language. Part II describes parallelism on shared memory architectures using OpenMP. Part III details parallelism on computer clusters using MPI for coordinating a computation. Part IV demonstrates the use of graphical programming units (GPUs) to solve problems using the CUDA language for NVIDIA graphics cards. Part V addresses programming on GPUs for non-NVIDIA graphics cards using the OpenCL framework. Finally, Part VI contains a brief discussion of numerical methods and applications, giving the reader an opportunity to test the methods on typical computing problems.

A New Approach to Scientific Computation Ulrich W. Kulisch, Willard L. Miranker, 2014-05-12 A New Approach to Scientific Computation is a collection of papers delivered at a symposium held at the IBM Thomas J Watson Research Center on August 3 1982 The symposium provided a forum for reviewing various aspects of an approach to scientific computation based on a systematic theory of computer arithmetic Computer demonstration packages for standard problems of numerical mathematics are considered Comprised of 12 chapters this volume begins by summarizing an extensive research activity in scientific computation as well as the experience gained through various implementations of a new approach to arithmetic on diverse processors including even microprocessors A complete listing of the spaces that occur in numerical computations is presented followed by a discussion of aspects of traditional computer arithmetic and a new definition of computer arithmetic The properties of semimorphisms are also considered Subsequent chapters focus on potential applications of programming packages to standard problems in numerical analysis implemented on a Z80 based minicomputer with a PASCAL extension called PASCAL SC as the programming language methods for solving algebraic problems with high accuracy and the use of a

computer with floating point arithmetic to obtain guaranteed sharp bounds for the value of an arithmetic expression An extension of FORTRAN which satisfies contemporary requirements of numerical computation is also described This book will be helpful to students and practitioners in the fields of computer science and applied mathematics
