Life and Physical Sciences Research for a New Era of Space Exploration National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee for the Decadal Survey on Biological and Physical Sciences in Space, 2010-08-23

In response to requests from Congress NASA asked the National Research Council to undertake a decadal survey of life and physical sciences in microgravity Developed in consultation with members of the life and physical sciences communities the guiding principle for the study is to set an agenda for research for the next decade that will allow the use of the space environment to solve complex problems in life and physical sciences so as to deliver both new knowledge and practical benefits for humankind as we become a spacefaring people The project's statement of task calls for delivery of two books an interim report and a final survey report Although the development of specific recommendations is deferred until the final book this interim report does attempt to identify programmatic needs and issues to guide near term decisions that are critical to strengthening the organization and management of life and physical sciences research at NASA

Communication Patterns of Engineers Carol Tenopir, Donald W. King, 2004-05-27 *Communication Patterns of Engineers* brings together, summarizes and analyzes the research on how engineers communicate, presenting benchmark data and identifying gaps in the existing research. Written by two renowned experts in this area, the text compares engineering communication patterns with those of science and medicine. Offers information on improving engineering communication skills, including the use of communication tools to address engineering departments' concerns about the inadequacies of communication by engineers. Provides strong conclusions to address what lessons engineering educators, librarians and communication professionals can learn from the research presented.

New Directions In Physics N. Metropolis, 2012-12-02 *New Directions in Physics* represents a fascinating view of the future as seen by some of the remarkable men who were here over 40 years ago. It makes it quite clear that we are still in the dawn of physics; the excitement and challenge that lie ahead are extraordinary. We also get a glimpse of where these remarkable men have been since the end of Project Y of the Manhattan Project and where they see the future directions for physics. This book comprises 20 chapters, with the first being an introductory chapter describing Los Alamos in the 1980s. The following chapters go on to discuss tiny computers obeying quantum mechanical laws, the past, present and future of nuclear magnetic resonance and experimental evidence that an asteroid impact led to the extinction of many species 65 million years ago. Other chapters cover the lunar laboratory, the future of particle accelerators, models, hypotheses and approximations, and comments on three thermonuclear paths for the synthesis of helium. The book also describes how the sad augurs mock their own presage: experiments on time reversal, symmetry and parity, the course of our magnetic fusion energy enterprise, early days in the Lawrence Laboratory, nuclear charge distribution in fission, developing

larger software systems reflections on style in physics tuning up the TPC remarks on the future of particle physics the supernova theory and the history and hierarchy of structure This book will be of interest to practitioners in the field of theoretical physics Expanding Perspectives on Open Science: Communities, Cultures and Diversity in Concepts and Practices L.
