The European World 1500-1800 Beat Kümin, 2014-01-10. The European World 1500-1800 provides a concise and authoritative textbook for the centuries between the Renaissance and the French Revolution. It presents early modern Europe not as a mere transitional phase but a dynamic period worth studying in its own right. Written by an experienced team of specialists and derived from a perennially successful undergraduate course it offers a student friendly introduction to all major themes and processes of early modern history. Structured in four parts dealing with socio-economic, religious, cultural and political issues it adopts a deliberately broad geographical perspective. Western and Central Europe receive particular attention but dedicated chapters also explore the wider global context. For this thoroughly revised and improved second edition the authors have added three new chapters on Politics and Government, Impact of War and Revolution. Specially designed to assist learning, *The European World 1500-1800* features state of the art surveys of key topics written by an international team of historians, suggestions for seminar discussion and further reading, extracts from primary sources and generous illustrations including maps, a glossary of key terms and concepts, a chronology of major events, a full index of persons, places and subjects, a fully featured companion website enhanced for this new edition. *The European World 1500-1800* will be essential reading for all students embarking on the discovery of the early modern period.

A Culture of Improvement Robert Friedel, 2010-02-26. How technological change in the West has been driven by the pursuit of improvement: a history of technology from plows and printing presses to penicillin, the atomic bomb and the computer. Why does technology change over time, how does it change and what difference does it make? In this sweeping ambitious look at a thousand years of Western experience, Robert Friedel argues that technological change comes largely through the pursuit of improvement, the deep rooted belief that things could be done in a

better way What Friedel calls the culture of improvement is manifested every day in the ways people carry out their tasks in life from tilling fields and raising children to waging war Improvements can be ephemeral or lasting and one person's improvement may not always be viewed as such by others Friedel stresses the social processes by which we define what improvements are and decide which improvements will last and which will not These processes he emphasizes have created both winners and losers in history Friedel presents a series of narratives of Western technology that begin in the eleventh century and stretch into the twenty first Familiar figures from the history of invention are joined by others the Italian preacher who described the first eyeglasses the dairywomen displaced from their control over cheesemaking and the little known engineer who first suggested a grand tower to Gustav Eiffel Friedel traces technology from the plow and the printing press to the internal combustion engine the transistor and the space shuttle Friedel also reminds us that faith in improvement can sometimes have horrific consequences as improved weaponry makes warfare ever more deadly and the drive for improving human beings can lead to eugenics and even genocide The most comprehensive attempt to tell the story of Western technology in many years engagingly written and lavishly illustrated **A Culture of Improvement** documents the ways in which the drive for improvement has shaped our modern world
