Comparative Survivorship in 1,200 Myasthenia Gravis Patients in Years from Onset

VINCENT F. PERLO, ROBERT S. SCHWAB, HENRY A. VIKTS,
Boston, and KERMIT E. OSSERMAN, and
GABRIEL GINKINS, New York City

There is still controversy about whether radiation of the thymus or thymectomy is better than drug therapy alone in the treatment of myasthenia gravis. One means of clarification would be an adequate comparative evaluation of the length of survival in years from onset of the disease. This report is the combined results of such a study in more than 1,200 patients from two special clinics: Massachusetts General Hospital, going back to 1935, and Mount Sinai Hospital, to 1951. Each patient had a chart plotted over the years, from onset to present data or death, showing degree of disability and response to therapy.

Sixty percent of the patients were female, 40% male. Eighty-two thymomas were removed by surgery. In 191 patients who had thymectomy, neither gross nor microscopic signs of tumor were found. Only 30% of the patients in the thymoma-thymectomy group are alive, and their survival in years is less than one-third of the average survival of all others. Eighty-five percent of the patients without thymomas who were operated on are living, compared with 76% of the entire group. The overall mortality in both groups since 1935 is 24%, whereas the rate in the nontumor thymectomy group is 15%.

The good-to-excellent results after thymectomy in nontumor cases average 65%. Survival is longer and remission significantly greater in these patients. Results were strikingly similar between clinics.

Data on benefit of radiation alone or prior to surgery in both tumor and nontumor cases will be discussed. Sex, age, duration and severity of illness, and type (ocular, bulbar, general) are important factors. Analysis of this data by the Life Table Method will be described.

The perplexing question of why the prognosis is so poor in the patient with a thymoma and myasthenia gravis even when the tumor is completely removed is still a challenge.

Myasthenia Gravis Occurring in Families

CHRISTIAN HERRMANN, JR., Los Angeles

Myasthenia gravis is generally considered to be a non-inherited and nonfamilial disorder. In a review of approximately 300 cases seen by the author in a ten-year period at the Myasthenia Gravis Clinic in the Division of Neurology at the Center for Health Sciences of the University of California in Los Angeles, 1 pair of adult siblings, 1 pair of juvenile siblings, and a father and son were found to have myasthenia gravis. Three other adults each had distant adult blood relatives with myasthenia gravis. Retinitis pigmentosa was present in 1 sibship, and in another sibship an unaffected sister had rheumatoid arteritis with positive I.E. cell preparation. The clinical features and laboratory findings, including biochemical, ergographic, histological, and immunologic studies, will be presented. A review of the literature and our findings will be discussed with related implications about newer concepts of myasthenia gravis.

Philosophical Foundations of Soviet Psychology T.R.S.L. Payne, 2012-12-06 This work is intended as an introduction to the study of Soviet psychology In it we have tried to present the main lines of Soviet psychological theory in particular the philosophical principles on which that theory is founded There are surprisingly few books in English on Soviet psychology or indeed in any Western European language The works that exist usually take the form of symposia or are collections of articles translated from Soviet periodicals The most important of these are *Psychology in the Soviet Union* ed by Brian Simon *Recent Soviet Psychology* ed by Neil O Connor and *Soviet Psychology A Symposium* ed by Ralf Winn Raymond Bauer has also edited an interesting symposium entitled *Some Views on Soviet Psychology* Only two systematic studies of Soviet psychology have been published to date Joseph Wortis *Soviet Psychiatry* and Raymond Bauer's *The New Man in Soviet Psychology* Both are valuable introductions to Soviet psychology Bauer's book in particular gives a good account of the debates on psychological theory in the Soviet Union in the nineteen twenties and thirties Both however are somewhat out of date There are also a number of interesting articles written by Ivan D London and Gregory Razran which give general surveys of particular periods or aspects of Soviet psychology These have been listed in the bibliography **Stalin and the Soviet**

Science Wars Ethan Pollock, 2021-05-11 Between 1945 and 1953 while the Soviet Union confronted postwar reconstruction and Cold War crises its unchallenged leader Joseph Stalin carved out time to study scientific disputes and dictate academic solutions He spearheaded a discussion of scientific Marxist Leninist philosophy edited reports on genetics and physiology adjudicated controversies about modern physics and wrote essays on linguistics and political economy Historians have been tempted to dismiss all this as the megalomaniacal ravings of a dying dictator But in *Stalin and the Soviet Science Wars* Ethan

Pollock draws on thousands of previously unexplored archival documents to demonstrate that Stalin was in fact determined to show how scientific truth and Party doctrine reinforced one another Socialism was supposed to be scientific and science ideologically correct and Stalin ostensibly embodied the perfect symbiosis between power and knowledge Focusing on six major postwar debates in the Soviet scientific community this elegantly written book shows that Stalin's forays into scholarship can be understood only within the context of international tensions institutional conflicts and the growing uncertainty about the proper relationship between scientific knowledge and Party dictated truths The nature of Stalin's interventions makes clear that more was at stake than high politics these science wars were about asserting that the Party was rational and modern and about codifying the Soviet worldview in a battle for the hearts and minds of people around the globe during the early Cold War Ultimately however the effort to develop a scientific basis for Soviet ideology undermined the system's legitimacy

Soviet Psychology John McLeish,2015-12-22 Originally published in 1975 this title sets out to show us the differences between Soviet and other ways of thinking about nature man and society The basic factor distinguishing Soviet psychology is that it views phenomena from the perspective of a highly articulated body of theoretical assumptions and rejects the inductive eclecticism of Western psychology The theoretical framework within which Soviet psychology functions is the product of a distinctive socio political and cultural development in Russia profoundly shaped by the institutions of autocracy

and Orthodox religion and the economic system of serfdom and the radical revolt which grew up in opposition to this and advocated materialism secularism and atheism This radical philosophic tradition in Russia best represented by the writings of Chernishevski fused with the doctrines of Marxism and the new science of behaviour developed by Sechenov and Pavlov to create the theoretical framework of Soviet psychology The book also analyses the discussions controversies and decrees which are at the root of the contemporary science of behaviour in the Soviet Union and points to the impressive body of empirical knowledge which has arisen Soviet Psychology is unique in presenting Soviet psychology from an inside point of view and in making us appreciate the strongly theoretical stance of Soviet psychology which Professor McLeish claims is unlikely to be much influenced by the new atmosphere of détente
