Measuring Organised Crime in Belgium Chr. Black,Tom Vander Beken,Brice De Ruyver,2000 The analysis of organised crime is of interest to academics policymakers and regulators The approach taken is necessarily determined by the requirement for analysis and the available resources This book is the outcome of a six month research undertaken for the Belgian Gendarmerie at Ghent University It presents a methodology to measure the impact of organised crime in Belgium and its research design has been shaped primarily by the demands of applied research In doing so the research draws extensively from a breadth of research into organised crime while being shaped by the intelligence and policy requirements of the Gendarmerie s Organised Crime unit This is reflected in the use of a risk management process that provides the iterative framework for the methodology Central to this is a three fold focus that incorporates organised crime groups illicit markets and economic sectors Each element relies upon a different method of analysis however their complementarity is ensured through the organising principle of the spectrum of enterprise The result is a methodology that is capable of being incorporated into existing systems and provides a richer form of strategic assessments regarding the impact of organised crime in Belgium *Innocent Until Interrogated* Gary L. walked into a Buddhist temple near Phoenix and discovered the most horrific crime in Arizona history Nine Buddhist temple members six of them monks committed to lives of non violence lay dead in a pool of blood shot execution style The massive manhunt that followed turned up no leads until a tip from a psychiatric patient led to the arrest of five suspects Each initially denied their involvement in the crime yet one by one under intense interrogation they confessed Soon after all five men recanted saying their confessions had been coerced One was freed after providing an alibi but the remaining suspects dubbed The Tucson Four by the media remained in custody even though no physical evidence linked them to the crime Seven weeks later investigators discovered almost by chance physical evidence that implicated two entirely new suspects The Tucson Four were finally freed on November 22 after two teenage boys confessed to the crime yet troubling questions remained Why were confessions forced out of innocent suspects Why and how did legal authorities build a case without evidence And ultimately how did so much go so wrong In this first book length treatment of the Buddhist Temple Massacre Gary L Stuart explores the unspeakable crime the inexplicable confessions and the troubling behavior of police officials Stuart s impeccable research for the book included a review of the complete legal records of the case an examination of all the physical evidence a survey of three years of print and broadcast news and more than fifty personal interviews related to the case Like *In Cold Blood* and *The Executioner s Song* *Innocent Until Interrogated* is a riveting read that provides not only a striking account of the crime and the investigation but also a disturbing look at the American justice system at its very worst

Toxicity and pharmacokinetic biomarkers for personalized non-small cell lung cancer treatment Anna Svedberg,2020-01-14 Lung cancer is the leading cause of cancer related deaths worldwide Unfortunately lung cancer is usually discovered at a late stage when the curative treatment options are limited The treatment can include surgery radiation chemotherapy targeted therapy and now also immunotherapy The challenge in cancer treatment is to eradicate cancer by the use of harsh treatments while still keeping the patient alive For this purpose treatments with severe toxicities are usually accepted but regularly lead to dose reductions or postponed treatment Large variations in response are generally observed between patients treated with the same drug at the same dose The dose may be adequate in one patient while ineffective or cause severe adverse drug reactions in other patients The occurrence of drug induced toxicities can however also be a positive indicator of treatment response In personalized treatment it is of importance to select the most suitable treatment option and give it at the most favorable dose to enable the patients to stay on treatment during the time the treatment is able to affect cancer since the tumor commonly develops resistance towards the treatment eventually In this thesis inter individual variability in

pharmacokinetics and toxicity for the targeted therapy erlotinib associated with the adverse events skin rash and diarrhea was studied. Inter individual variability in toxicity was also studied for the chemotherapy treatment gemcitabine carboplatin linked to the hematological toxicities neutropenia and leukopenia. Erlotinib was studied in papers I-IV. Erlotinib and its metabolite concentrations were determined using a validated LC-MS/MS method. Diarrhea was associated with erlotinib and the metabolite M13 while skin rash was associated with the activity of the erlotinib metabolizing enzyme CYP3A and the ABCG2 single nucleotide polymorphism rs10856870. CYP3A was also shown to be induced during treatment. Additionally, in vitro studies showed that genetic variability in ABCG2 contributes to differences in intracellular concentrations. Genes and gene variants were found to be associated with gemcitabine carboplatin-induced toxicity in paper V. The variants were partially validated and two models were developed to estimate the risk of leukopenia or neutropenia based on a set of genetic variants.

Lungcancer är den cancerform som leder till flest antal dödsfall runt om i världen. Tyvärr upptäcks lungcancer oftast i ett sent skede när man glömligheten att bota cancer när begränsad. Lungcancer kan behandlas med flera behandlingsmetoder antingen enskilt eller i kombination som till exempel kirurgi strålning cellgifter målriktad behandling eller immunoterapi. Den stora svårigheten vid cancerbehandling är att eliminera cancer samtidigt som patienten klarar av behandlingen. Cancerbehandling innefattar ofta starka läkemedel som vanligtvis kan ge upphov till svåra biverkningar som resulterar i dosreduktion uppehåll i behandling eller till och med avslutad behandling. Det finns idag flera behandlingsalternativ att välja mellan. Det är därför av stor vikt att välja en behandlingsmetod som cancer tumören svarar på samtidigt som behandlingen ges i rätt dos för en nedsatt effekt. Det finns idag stor variation mellan patienter i hur de svarar på cancerbehandling. Vissa patienter får bra effekt av behandlingen medan andra patienter inte får någon effekt alls eller får svåra biverkningar. Tumören har en förmåga att efter en tid utveckla resistens. Det är därför viktigt att patienten behandlas effektivt mot cancer under en så lång period som möjligt när det finns en effekt mot tumören. I den här avhandlingen har två olika behandlingar vid icke små cellig lungcancer studerats för att bestämma först vad som orsakar variation mellan patienter. Den ena behandlingen är en målriktad behandling med erlotinib. Tarceva som vanligtvis ger biverkningar i form av hudutslag eller diarré. Den andra studerade behandlingen är en kombination av cellgifter gemcitabin tillsammans med karboplatin som vanligtvis ger biverkningarna leukopeni och neutropeni som leder till försämrat immunförsvar. I delarbete I-IV studerades erlotinib antingen via ett modellsystem i form av en cellinje eller från behandlade lungcancerpatienter. Variation av läkemedelskoncentrationer samt genetisk variation i arvsmassan studerades. Läskemedelskoncentrationer i erlotinibpatienters blod analyserades med en utvecklad och validerad kromatografimetod. Diarré visade sig vara kopplat till koncentrationen av erlotinib och metaboliten M13. Hudbiverkningar var associerade med CYP3A aktivitet som är enzymet som bryter ner erlotinib i kroppen. CYP3A visade sig också att ha sin aktivitet i samband med att man påbörjar erlotinibbehandling. Hudbiverkningar kopplades också till en kvot av metaboliter OSI 420 didesmetyl erlotinib och en naturlig genetisk variation i ABCG2 genen som är involverad i transport av erlotinib ut ur

kroppen I delarbete V studerades genetisk variation i gemcitabin carboplatin behandlade lungcancerpatienter D identifierades naturlig genetisk variation i arvsmassan kunna f rklara en del av variationen i uppkomsten av biverkningar Flera genetiska varianter anv ndes f r att bygga modeller som kan anv ndas f r att f rutsp om patienter l per h g risk att drabbas av sv ra cellgiftsbiverkningar
