Roberts,Sarah Elton,Gilian R. Bentley,2022 The volume aims to encourage more co produced research addressing questions about human health past and present by scholars working in evolutionary medicine EM and palaeopathology It highlights future research that may promote that collaboration between palaeopathology and EM This chapter starts with the premise that EM and palaeopathology have clear synergies in that they take a deep time perspective as they explore health in the past and in the present It introduces the volume and first provides a background to evolutionary medicine from its first appearance in the early 1990s including discussions about ultimate and proximate explanations for disease It then highlights that the field of palaeopathology was initially established much earlier than EM and it is argued that practitioners before the 1990s often physicians were simply not exposed to evolutionary theory in relation to the diseases they were seeing both in the living and in the dead However the stage now looks set for more productive collaborations A thematic overview of the volume and its individual chapters follows within the framework of the suggested categories for study within EM Williams and Nesse 1990 The chapter finishes with some discussion about the One Health initiative EM and palaeopathology an initiative that is considered an essential area of study now and into the future *Everyday Religion* Nancy T. Ammerman,2007 Social scientists sometimes seem not to know what to do with religion In the first century of sociologys history as a discipline the reigning concern was explaining the emergence of the modern world and that brought with it an expectation that religion would simply fade from the scene as societies became diverse complex and enlightened As the century approached its end however a variety of global phenomena remained dramatically unexplained by these theories Among the leading contenders for explanatory power to emerge at this time were rational choice theories of religious behavior Researchers who have spent time in the field observing religious groups and interviewing practitioners however have questioned the sufficiency of these

market models Studies abound that describe thriving religious phenomena that fit neither the old secularization paradigm nor the equations predicting vitality only among organizational entrepreneurs with strict orthodoxies In this collection of previously unpublished essays scholars who have been immersed in field research in a wide variety of settings draw on those observations from the field to begin to develop more helpful ways to study religion in modern lives The authors examine how religion functions on the ground in a pluralistic society how it is experienced by individuals and how it is expressed in social institutions Taken as a whole these essays point to a new approach to the study of religion one that emphasizes individual experience and social context over strict categorization and data collection
