Nearest Neighbor Search A Database Perspective:

Nearest Neighbor Search: Apostolos N. Papadopoulos, Yannis Manolopoulos, 2005 Explores the way spatial database management systems aim at supporting queries that involve the space characteristics of the underlying data This book discusses query processing techniques for nearest neighbor queries It provides both basic concepts and results in spatial databases and parallel processing research Springer Handbook of Geographic Information Wolfgang Kresse, David M. Danko, 2012-02-21 Computer science provides a powerful tool that was virtually unknown three generations ago Some of the classical fields of knowledge are geodesy surveying cartography and geography Electronics have revolutionized geodetic methods Cartography has faced the dominance of the computer that results in simplified cartographic products All three fields make use of basic components such as the Internet and databases The Springer Handbook of Geographic Information is organized in three parts Basics Geographic Information and Applications Some parts of the basics belong to the larger field of computer science However the reader gets a comprehensive view on geographic information because the topics selected from computer science have a close relation to geographic information The Springer Handbook of Geographic Information is written for scientists at universities and industry as well as advanced and PhD students Signal Processing and Multimedia Sankar Kumar Pal, William I.
