Monthly Catalog of United States Government Publications, 2003 **Aviation Structural Mechanic H 3 & 2** John R. Maslanik, 1983 Army Readiness Reporting Systems, 1945-2003 William M. Donnelly, 2018 The U S Army before 1945 did not have and did not need a formal readiness reporting system After World War II however it found itself committed to large scale deployments in Europe and in the Pacific commitments that with the Cold War would continue for the next 45 years The demands of this war along with the wars in Korea and Vietnam made it vital that senior service leaders had accurate information on the readiness of units in the Regular Army the Army National Guard and the Army Reserve The methods for measuring readiness however soon became and then remained a matter of contention Equally contentious was the use of data generated by readiness reporting systems both within the service and by others outside the service The end of the Cold War did not end these disputes Indeed the years between that victory and the start of the second Iraq war in 2003 were a time of heightened concern over military readiness and how to assess it Provided by publisher *Serials Catalog: Titles A-Z* Iowa State University. rehabilitative techniques this first volume takes chronic nonspecific musculoskeletal pain syndromes as its focus for application The FPMSS paradigm complements orthopedic rheumatologic and neurologic understandings of the musculoskeletal system and contrasts with current models of manual medicine in several important respects Understands the musculoskeletal system MSS as an integrated organ system Discriminates questions about physiology from questions about anatomy Discriminates questions about pathology from questions about physiology Differentiates functional pathology from structural pathology Appreciates principles of scientifically valid nomenclature for function and dysfunction of musculoskeletal structures as components of an integrated system Recognizes dysfunction of the musculoskeletal system as inefficient function Shifts the emphasis of examination for dysfunction from malalignment of structure posture to disturbance of systemic movement Discriminates control of posture and movement from imbalance of available motion Grades available motion deficits using the criterion of proportionality not merely symmetry thus revealing otherwise unappreciated dysfunction and allowing for prioritization and profiling Prioritizes mobilization interventions according to specified ranked criteria Profiles an individual's motion phenotype based upon patterns of available motion deficits thus providing precision biomechanical medicine Use of the FPMSS paradigm examination will reduce the incidence of false negative and false positive findings for MSS dysfunction thus improving the effectiveness safety and efficiency of caring for those suffering from chronic musculoskeletal pain
