Storey's Illustrated Guide to Poultry Breeds Carol Ekarius, 2016-07-18 More than 128 birds strut their stuff across the pages of this definitive primer for intrepid poultry farmers and feather fanciers alike From the Manx Rumpy to the Redcap and the Ancona duck to his Aylesbury cousin each breed is profiled with a brief history detailed descriptions of identifying characteristics and colorful photography Comprehensive and fun Storey's Illustrated Guide to Poultry Breeds celebrates the personalities and charming good looks of North America's quirkiest barnyard birds and waterfowl *Why Did the Chicken Cross the World?* Andrew Lawler, 2016-04-26 Beginning in the jungles of Southeast Asia trekking through the Middle East traversing the Pacific Lawler discovers the secrets behind the chicken's transformation from a shy wild bird into an animal of astonishing versatility capable of serving our species changing needs Across the ages it has been an all purpose medicine sex symbol gambling aid inspiration for bravery and of course the star of the world's most famous joke Only recently has it become humanity's most important single source of protein Most surprisingly the chicken more than the horse cow or dog has been a remarkable constant in the spread of civilization across the globe Page 4 of cover *Field and Laboratory Methods in Animal Cognition* Nereida Bueno-Guerra, Federica Amici, 2018-08-09 Would you ask a honeybee to point at a screen and recognise a facial expression Or ask an elephant to climb a tree While humans and non human species may inhabit the same world it's likely that our perceptual worlds differ significantly Emphasising Uexküll's concept of *Umwelt* this volume offers practical advice on how animal cognition can be successfully tested while avoiding anthropomorphic conclusions The chapters describe the capabilities of a range of animals from ants to lizards to chimpanzees revealing how to successfully investigate animal cognition across a variety of taxa The book features contributions from leading cognition researchers each offering a series of examples and practical tips drawn from their own experience Together the authors synthesise information on current field and laboratory methods providing researchers and graduate students with methodological advice on how to formulate research questions design experiments and adapt studies to different taxa An Introduction to Form and Feathering of the Domestic Fowl Brian Reeder, 2011-05-05 In this introduction to the genetics of form and feathering of the domestic fowl you will find a straightforward method that allows anyone beginner or advanced hobbyist to understand how the major genes of form and feathering come together to create the silhouette that is the hallmark of each breed Beginning with a discussion of the skeleton genes then moving to muscling genes feathering genes and finally to comb genes an understanding of the layers that make the silhouette is revealed From this system of understanding how the silhouette is formed one can then understand what really makes one breed unique from another All of the genes presented herein are found in the commonly seen exhibition breeds and many hobbyists will be familiar with these breeds but may be less familiar with the genetic factors involved This volume is a wonderful tool for learning the basis of how the breeds are made how their respective forms are derived from separate genes of form and feathering and how those genes

all come together to make the one visual impression that we consider a breed There is in fact no one single gene which makes the form of any given breed Many genes are required to derive each type and the combination of those many genes creates the silhouette As you will see from the many silhouette illustrations in this book once you know a breed it is instantly recognizable from its silhouette alone In addition to the discussion of the genes there is a discussion of basic genetic concepts and of the complex and often confusing method of quantitative selection that is very applicable to many of the genes described herein This book presents a very clear system for learning about the genetics of form and feathering in the domestic fowl and is written to be understood by the young and beginners alike Chicken and Egg Andy Cawthray,James Hermes,2015-05-05 The age old question of which comes first is finally answered in Chicken and Egg For the purposes of egg centric chicken keepers it s the egg A new approach to chicken keeping Chicken and Egg is specifically geared toward hobby farmers and casual chicken keepers who wish to produce eggs of a particular color flavor and type Whether the reader desires the delectable turquoise eggs of the Araucana or the chocolate brown eggs of the Blue Copper Maran learn how it s possible to put the egg before the chicken Written by two expert poultry breeders and specialists Andy Cawthray and James Hermes this new colorful handbook offers an edifying overview of the natural history of chickens and the science of egg production so that keepers better understand how to care for egg layers improve the quality of their eggs through diet and housing and maximize their egg production for years to come The authors have rounded up a few dozen chicken breeds and offer their hardboiled advice about which hens offer the most egg collect daily output Directory of the best egg laying chicken breeds plus colorful two page spreads of the 20 most popular choices Advice on how to select and set up your flock including safe and affordable housing runs and coops Selecting the best diets for your flock to maximize production and avoid egg failure Essential information about brooding and laying the birds behavior and solving problems within the flock Specially commissioned artwork from watercolorist and illustrator Kate Osborne **The Chicken Encyclopedia** Gail Damerow,2012-01-31 From addled to wind egg and crossed beak to zygote the terminology of everything chicken is demystified in The Chicken Encyclopedia Complete with breed descriptions common medical concerns and plenty of chicken trivia this illustrated A to Z reference guide is both informative and entertaining Covering tail types breeding molting communication and much more Gail Damerow provides answers to all of your chicken questions and quandaries Even seasoned chicken farmers are sure to discover new information about the multifaceted world of these fascinating birds

Global Ecology in Historical Perspective Kazunobu Ikeya, William Balée, 2023-03-10. This book primarily examines human-animal and human-plant interactions in Asian forests, Southeast Asia and Japan, and inland waters of China. For comparison, cases from the Americas (whales in the Arctic sea, turtles in the Caribbean) and plants in the Amazon and Central Asia are also included. The relationship between plants, animals and humans in Asia is quite unique from a global perspective. For example, *satoyama* in Japan means ecotone area or the boundary between a village and a forest. There, as the number of inhabitants declines, bears, wild boars and other animals increasingly ravage crops, sometimes attacking humans as well. By showing the regional nature of human-animal and human-plant interactions in Asia, this book provides for the first time a framework for understanding the world's animal and plant-human relationships. It is assumed that the relationships between humans and animals and plants during this period were diverse, including hunting, taming, semi-domestication and full domestication. At the same time, for regions outside of Asia, the extent to which these diverse relationships were adapted and how diversity was formed is explained from the perspective of historical ecology. Customers can expect to derive perspectives on the coexistence of human-animal and plant-animal relationships from this book in the near future. The conservation of rare species, diverse habitats and biodiversity is a central theme in considering the relationship between modern civilization and the global environment. In post-industrial Japan, one focus has been the protection of iconic animals such as storks, crested ibis, dugongs and sea turtles, while damage to crops and humans by deer, wild boars, monkeys, bears and other common animals has become an important social issue. How can the world's 7.7 billion plus people live in harmony with other species? We would like to get some hints on how to solve the problems we are facing.

Sexual Selection Malte Andersson, 2019-12-31. Bright colors, enlarged fins, feather plumes, song, horns, antlers and tusks are often highly sex-dimorphic. Why have males in many animals evolved more conspicuous ornaments, signals and weapons than females? How can such traits evolve although they may reduce male survival? Such questions prompted Darwin's perhaps most scientifically controversial idea, the theory of sexual selection. It still challenges researchers today as they try to understand how competition for mates can favor the variety of sex-dimorphic traits. Reviewing theoretical and empirical work in this very active field, Malte Andersson, a leading contributor himself, provides a major up-to-date synthesis of sexual selection. The author describes the theory and its recent development, examines models, methods and empirical tests, and identifies many unsolved problems. Among the topics discussed are the selection and evolution of mating preferences, relations between sexual selection and speciation, constraints on sexual selection and sex differences in signals, body size and weapons. The rapidly growing study of sexual selection in plants is also

reviewed This volume will interest students teachers and researchers in behavioral ecology and evolutionary biology
