Rationality and Cognition Nenad Miscevic, 2000-12-15 Cognitive science has posed some radical challenges to philosophy in recent years particularly in the study of the cognitive activities and capacities of individuals Many philosophers have taken up the challenge and one result has been the emergence of a radical new wave of relativism one that assaults the credibility of rationalist views In this book Nenad Miscevic defends naturalistic rationalism against these recent relativist attacks The book begins with an excellent introduction to cognitive science and goes on to create a searching defence of human rationality and of a traditional role for truth in epistemology Miscevic presents a critical scrutiny of the relativism championed by Stephen Stich and Paul Churchland and their followers showing that it not only exaggerates the subversive impact of science but relies on its links with naturalism for much of its credibility His careful dissection of relativist arguments establishes the main outlines of a positive rationalistic picture that is both original and convincing

Aspects and Prospects of Theoretical Computer Science Jürgen Dassow, Jozef Kelemen, 1990-11-07 This volume contains the texts of the tutorial lecture five invited lectures and twenty short communications contributed for presentation at the Sixth International Meeting of Young Computer Scientists IMYCS 90 The aim of these meetings is threefold 1 to inform on newest trends results and problems in theoretical computer science and related fields through a tutorial and invited lectures delivered by internationally distinguished speakers 2 to provide a possibility for beginners in scientific work to present and discuss their results and 3 to create an adequate opportunity for establishing first professional relations among the participants

Cognitive Psychology Alan D. Baddeley, Niels Ole Bernsen, 1989 The papers in this series of five volumes provide a snapshot of current trends in European Cognitive Science Each of the volumes deals with problems in cognitive science from a different perspective covering the interacting disciplines of cognitive psychology logic and linguistics human computer interaction neuroscience and artificial intelligence respectively Based on the analysis and exposition of the state of the art in their various fields of expertise the contributors take a prospective look at the basic research problems confronting cognitive science over the next five to ten years Whilst the authors and editors do consider a wide range of research in their area they have been encouraged to give their personal view of important directions rather than a bland comprehensive list Although inevitably controversial this approach allows a stimulating review of the field and one which should inspire debate The highly interdisciplinary nature of cognitive science research means that many issues such as natural language or vision are explored from diverse perspectives in papers representing different disciplines Each contribution has been written in a way which makes it comprehensible to colleagues from neighbouring disciplines as well as students of cognitive science It will be particularly useful to graduate students contemplating research projects The work has been supported and

coordinated by the research unit FAST Forecast and Assessment in Science and Technology of the EEC Commission in Brussels *Research Directions in Cognitive Science: Logic and linguistics* ,1989 **People and Computers VIII** J.
