

Rutherford and the Nucleus of the Atom

- Rutherford used the radioactive alpha particles discovered by Becquerel to establish the nature of the nucleus of the atom
- He directed the positively charged He atoms (alpha particles) at a piece of gold foil
- Most passed through
- Some were deflected
- A few bounced back
- Rutherford was able to reason that there must be a positive portion in the center of the atom because like repels like
- This portion was referred to as the nucleus
- Most of the atom is empty space

Rutherford The Nature Of The Atom:

Rutherford and the Nature of the Atom Edward Neville da Costa Andrade, 1964 **Quantum: Einstein, Bohr, and the Great Debate about the Nature of Reality** Manjit Kumar, 2010-05-24 A lucid account of quantum theory and why you should care combined with a gripping narrative San Francisco Chronicle Quantum theory is weird As Niels Bohr said if you weren't shocked by quantum theory you didn't really understand it For most people quantum theory is synonymous with mysterious impenetrable science And in fact for many years it was equally baffling for scientists themselves In this tour de force of science history Manjit Kumar gives a dramatic and superbly written account of this fundamental scientific revolution focusing on the central conflict between Einstein and Bohr over the nature of reality and the soul of science This revelatory book takes a close look at the golden age of physics the brilliant young minds at its core and how an idea ignited the greatest intellectual debate of the twentieth century **The Atomic Bomb in Images and Documents** Samuel S. Kloda, 2022-02-23

Samuel S Kloda spent more than 40 years meeting with the scientists who built the first atomic bombs and the crews that delivered them to Hiroshima and Nagasaki Those conversations encouraged him to search archives throughout the U S Newly unearthed documents were brought to former members of the Manhattan Project or the 509th Composite Group who were always willing to autograph and recount the details of these artifacts Most of the major books on the Manhattan Project were published before 1973 In the years that followed newly declassified documents became available and showed that many authors had included huge inaccuracies Richly illustrated with important documents and photographs Kloda's chronicle of the dawn of the atomic age sets the record straight on one of the greatest scientific advancements of all time Readers will see how a single letter from Albert Einstein to President Franklin Roosevelt in 1939 led to the formation of the Advisory Committee on Uranium and within six years to the secret Manhattan Project employing more than 100 000 men and women

From 'Science in the Making' to Understanding the Nature of Science Mansoor Niaz, 2012-02-06 The Nature of Science is highly topical among science teacher educators and researchers Increasingly it is a mandated topic in state curriculum documents This book draws together recent research on Nature of Science studies within a historical and philosophical framework suitable for students and teacher educators Traditional science curricula and textbooks present science as a finished product Taking a different approach this book provides a glimpse of science in the making scientific practice imbued with arguments controversies and competition among rival theories and explanations Teaching about science in the making is a rich source of motivating students to engage creatively with the science curriculum Readers are introduced to science in the making through discussion and analysis of a wide range of historical episodes from the early 19th century to early 21st century Recent cutting edge research is presented to provide insight into the dynamics of scientific progress More than 90 studies from major science education journals related to nature of science are reviewed A theoretical framework field tested with in service science teachers is developed for moving from science in the making to understanding

R. Shea,1983-08-31 and less as the emanation under went radioactive decay and it became motionless after about 30 seconds Since this process was occurring very rapidly Hahn and Sackur marked the position of the pointer on a scale with pencil marks As a timing device they used a metronome that beat out intervals of approximately 1.3 seconds This simple method enabled them to determine that the half life of the emanations of actinium and emanium were the same Although Giesel's measurements had been more precise than Debierne's the name of actinium was retained since Debierne had made the discovery first Hahn now returned to his sample of barium chloride He soon conjectured that the radium enriched preparations must harbor another radioactive substance The liquids resulting from fractional crystallization which were supposed to contain radium only produced two kinds of emanation One was the long lived emanation of radium the other had a short life similar to the emanation produced by thorium Hahn tried to separate this substance by adding some iron to the solutions that should have been free of radium but to no avail Later the reason for his failure became apparent The element that emitted the thorium emanation was constantly replenished by the element believed to be radium Hahn succeeded in enriching a preparation until it was more than 100 000 times as intensive in its radiation as the same quantity of thorium

Learn about the process of Splitting The Atom with iMinds insightful knowledge series The possibility of the existence of the atom has fascinated scientists for centuries To begin with it was more of a logical belief than scientific fact But the belief in its existence is what motivated a number of people to develop the knowledge we now have about the atom Ernest Rutherford with the help of Ernest Walton and John Cockroft first managed to split the atom in 1932 But they could not have done so without the wealth of information others had passed down to them In the early 19th century English scientist John Dalton first changed atomic theory from a vague idea into a more concise mathematical framework He argued that all atoms of a given element must be identical to each other and that all chemical compounds are formed as a result of a combination of two or more different kinds of atoms But one of the major hurdles was that nobody could actually see the atom iMinds brings targeted knowledge to your eReading device with short information segments to whet your mental appetite and broaden your mind **Oswaal ISC Question Bank Class 11 Chemistry | Chapterwise | Topicwise | Solved Papers | For 2025 Exams**
