Antigens Bjarte G. Solheim,Erna Moller,Soldano Ferrone,2012-12-06 This volume deals with the structure and function of molecules that have during the last decade turned out to have a central role in immune responses Transplantation antigens were discovered and characterized by Gorer about 50 years ago and the biological basis for the unequalled complexity of their variability between individuals within a species in spite of extreme conservation between species was the subject of intense research and discussion for many years During the days of belief in immune surveillance against spontaneously developing tumors it was suggested that histoincompatibility between members of one species would prevent cancer from being a contagious disease and thus a threat to the species Immunologists involved in human transplantation had to learn and care about the complexity especially after 1967 when it was found that HLA antigens were the products of the human MHC Rejection of HLA identical sib kidney grafts was so rare even in those days that cases of rejection were described in scientific papers

Small Carnivores Emmanuel Do Linh San,Jun J. Sato,Jerrold L. Belant,Michael J. Somers,2022-07-25 Small Carnivores Evolution Ecology Behaviour and Conservation This book focuses on the 232 species of the mammalian Order Carnivora with an average body mass 21.5 kg Small carnivores inhabit virtually all of the Earth's ecosystems adopting terrestrial semi fossorial semi arboreal or semi aquatic lifestyles They occupy multiple trophic levels and therefore play important roles in the regulation of ecosystems such as natural pest control seed dispersal and nutrient cycling In areas where humans have extirpated large carnivores small carnivores may become the dominant predators which may increase their abundance mesopredator release to the point that they can sometimes destabilize communities drive local extirpations and reduce overall biodiversity On the other hand one third of the world's small carnivores are threatened or near threatened with extinction This results from regionally burgeoning human populations industrial and agricultural activities causing habitat reduction destruction fragmentation and pollution Overexploitation persecution and the impacts of introduced predators competitors and pathogens have also negatively affected many small carnivore species Although small carnivores have been intensively studied over the past decades bibliometric studies showed that they have not received the same attention given to large carnivores Furthermore there is huge disparity in how research efforts on small carnivores have been distributed with some species intensively studied and others superficially or not at all This book aims at filling a gap in the scientific literature by elucidating the important roles of and documenting the latest knowledge on the world's small carnivores pThis is a book that has been needed for decades It is the first compendium of recent research on a group of mammals which has received almost no attention before the early 1970s This book covers a wide range of subdisciplines and techniques and should be considered a solid baseline for further research on this little known group of highly interesting mammals As our knowledge regarding how ecosystems function increases then the valuable role of small carnivores and the necessity for their conservation should be regarded as of paramount importance The topics covered in this book should therefore be of great interest not only to academics and wildlife researchers but also to the interested layman *Directory*
