

Sciences Basic to Psychiatry: AOTP Guidelines

The Standing Committee of the Association of University Teachers of Psychiatry (AOTP) have recently prepared guidelines for teachers and students on sciences basic to psychiatry. This followed a request from the College and these guidelines are now being published in the *Bulletin*. They have been considered by the Education Committee and by Council who commend them to members of the College.

The guidelines do not refer to the important subjects of dynamic or descriptive psychopathology, not because the AOTP wished to exclude them from basic sciences, but because they did not present the same problems to teachers or students. It is hoped, however, that the Standing Committee will consider these subjects later. The Chairman of the AOTP, in referring these guidelines to the College, has pointed out that at present basic sciences are taught in the first year of training. There are some disadvantages with this arrangement, as it might encourage trainees to think of the subject as something to be learned and forgotten, and it makes it unnecessarily difficult to integrate basic sciences and clinical teaching. In some ways it might be more satisfactory to teach basic sciences over the whole of the three

years of training and examine them in the Membership papers. In drawing up these guidelines, however, the AOTP considered what would be appropriate in the present circumstances of an examination after one year.

The future of the MRCPsych Examination is currently under review, and the Court of Electors has set up a special working party with its membership drawn from the Court and the Examinations Sub-Committee who will consider and review possible future changes in the Examination, including the Preliminary Test. If major changes are introduced into the Examination, advance notice will be given of this, so that trainees will not be disadvantaged by being inappropriately prepared, and trainers will have had sufficient time to re-organize their courses and training programmes.

In the meantime the College would wish to commend, particularly to tutors, the helpful advice in these guidelines, emphasizing that they are not a formal College syllabus but a guide to some of the core elements of the sciences basic to psychiatry.

Guidelines for Students and Teachers

Psychiatrists need to learn about basic sciences if they are to have a full understanding of psychiatric disorders and their treatment, and they need to be able to assess and assimilate advances in knowledge which occur during their professional careers. Any syllabus in basic sciences for psychiatrists training in this country assumes a basic medical education of the kind provided in the United Kingdom, including an elementary knowledge of behavioural sciences and statistics. A trainee whose medical education was in another country may not have studied a comparable range of subjects, and it may be necessary to arrange some additional instruction to bring him or her to this starting point.

Because knowledge is advancing rapidly in all the sciences basic to psychiatry, any syllabus will require regular revision. For the same reason it is essential that the trainee should learn to evaluate evidence of new discoveries and not merely be informed about the present state of knowledge. To achieve this, the student should study a few subjects in detail at the same time as he acquires a reasonably broad knowledge of relevant parts of the field. A useful teaching method is to consider critically scientific papers in the subject.

It is not the purpose of this document to provide a justification for basic science teaching to trainees in psychiatry. We assume that there is general agreement that some scientific knowledge is essential. Nor have we attempted a detailed justification for the choice of each of the disciplines included here: they too appear to be rather

generally agreed. Instead the purpose of these guidelines is to indicate the balance between disciplines and the selection of topics within each discipline. The consensus views were arrived at by a working party of the AOTP (Drs R. Palmer, M. Weller and G. Hay). The working party obtained evidence from 52 correspondents, who included both psychiatrists and teachers of the relevant basic sciences. The curriculum that follows is not intended to restrict the trainer's interests; he should certainly have covered the subjects in this list, but he should be encouraged to pursue additional topics which interest him.

Many subjects can be considered basic to psychiatry, but the following have a serious claim for inclusion and are part of most existing courses of instruction: neuroanatomy, neuropathology, neurochemistry, neurophysiology (including neuroendocrinology), psychology, ethology, social anthropology, sociology, epidemiology, statistics and research methods. These guidelines do not cover phenomenological and dynamic psychopathology, which form part of the preliminary test but present fewer problems to clinicians, in the definition of the syllabus. With such a long list there is an obvious risk that teaching will be superficial and fragmented. For this reason, teaching should emphasize the inter-relations of different disciplines, and the examiners should ask some questions which relate to this. At the same time, within each subject some topics should be selected which can illustrate the scientific method and the ways of
