and less snow each winter and the ice sheets in the Arctic and Antarctica are melting fast Heat is the first order threat that drives all other impacts of the climate crisis And as the temperature rises it is revealing fault lines in our governments our politics our economy and our values The basic science is not complicated Stop burning fossil fuels tomorrow and the global temperature will stop rising tomorrow Stop burning fossil fuels in 50 years and the temperature will keep rising for 50 years making parts of our planet virtually uninhabitable It's up to us The hotter it gets the deeper and wider our fault lines will open The Heat Will Kill You First is about the extreme ways in which our planet is already changing It is about why spring is coming a few weeks earlier and fall is coming a few weeks later and the impact that will have on everything from our food supply to disease outbreaks It is about what will happen to our lives and our communities when typical summer days in Chicago or Boston go from 90 F to 110 F A heatwave Goodell explains is a predatory event one that culls out the most vulnerable people But that is changing As heatwaves become more intense and more common they will become more democratic As an award winning journalist who has been at the forefront of environmental journalism for decades Goodell's new book may be his most provocative yet explaining how extreme heat will dramatically change the world as we know it Masterfully reported mixing the latest scientific insight with on the ground storytelling Jeff Goodell tackles the big questions and uncovers how extreme heat is a force beyond anything we have reckoned with before **Edward Bancroft** Thomas J. Schaeper, 2011-01-01 Looks at the life of the American scientist and man of letters who led a secret life in Great Britain as British agent working against both the American colonies and the French during the Revolutionary War [Kinetic Theory Of Gases, The: An Anthology Of Classic Papers With Historical Commentary](#) Stephen G Brush, 2003-07-28 This book introduces physics students and teachers to the historical development of the kinetic theory of gases by providing a collection of the most important contributions by Clausius Maxwell and Boltzmann with introductory surveys explaining their significance In addition extracts from the works of Boyle Newton Mayer Joule Helmholtz Kelvin and others show the historical context of ideas about gases energy and irreversibility In addition to five thematic essays connecting the classical kinetic theory with 20th century topics such as indeterminism and interatomic forces there is an extensive international bibliography of historical commentaries on kinetic theory thermodynamics etc published in the past four decades The book will be useful to historians of science who need primary and secondary sources to be conveniently available for their own research and interpretation along with the bibliography which makes it easier to learn what other historians have already done on this subject **Treatise on Geophysics, Volume 7** David Bercovici, 2010-05-17 Treatise on Geophysics Mantle Dynamics Volume 7 aims to provide both a classical and state of the art introduction to the methods and science of mantle dynamics as well as survey leading order problems both solved and unsolved and current understanding of how the mantle works It is organized around two themes 1 how is mantle convection studied and 2 what do we understand about mantle dynamics to date The first four chapters are thus concerned with pedagogical reviews of the physics of mantle convection laboratory

studies of the fluid dynamics of convection relevant to the mantle theoretical analysis of mantle dynamics and numerical analysis and methods of mantle convection The subsequent chapters concentrate on leading issues of mantle convection itself which include the energy budget of the mantle the upper mantle and lithosphere in and near the spreading center mid ocean ridge environment the dynamics of subducting slabs hot spots melting anomalies and mantle plumes and finally geochemical mantle dynamics and mixing Self contained volume starts with an overview of the subject then explores each topic in detail Extensive reference lists and cross references with other volumes to facilitate further research Full color figures and tables support the text and aid in understanding Content suited for both the expert and non expert **Nails, Noggins and**

Empirical Model Discovery and Theory Evaluation David F. Hendry, Jurgen A. Doornik, 2014-07-03 A synthesis of the authors groundbreaking econometric research on automatic model selection which uses powerful computational algorithms and theory evaluation Economic models of empirical phenomena are developed for a variety of reasons the most obvious of which is the numerical characterization of available evidence in a suitably parsimonious form Another is to test a theory or evaluate it against the evidence still another is to forecast future outcomes Building such models involves a multitude of decisions and the large number of features that need to be taken into account can overwhelm the researcher Automatic model selection which draws on recent advances in computation and search algorithms can create and then empirically investigate a vastly wider range of possibilities than even the greatest expert In this book leading econometricians David Hendry and Jurgen Doornik report on their several decades of innovative research on automatic model selection After introducing the principles of empirical model discovery and the role of model selection Hendry and Doornik outline the stages of developing a viable model of a complicated evolving process They discuss the discovery stages in detail considering both the theory of model selection and the performance of several algorithms They describe extensions to tackling outliers and multiple breaks leading to the general case of more candidate variables than observations Finally they briefly consider selecting models specifically for forecasting

Theoretical Concepts in Physics Malcolm S. Longair, 2003-12-04 A highly original and truly novel approach to theoretical reasoning in physics This book illuminates the subject from the perspective of

real physics as practised by research scientists It is intended to be a supplement to the final years of an undergraduate course in physics and assumes that the reader has some grasp of university physics By means of a series of seven case studies the author conveys the excitement of research and discovery highlighting the intellectual struggles to attain understanding of some of the most difficult concepts in physics Case studies include the origins of Newton's law of gravitation Maxwell's equations mechanics and dynamics linear and non linear thermodynamics and statistical physics the origins of the concepts of quanta special relativity general relativity and cosmology The approach is the same as that in the highly acclaimed first edition but the text has been completely revised and many new topics introduced

The Story of Chemistry N. C. Datta, 2005 Chemistry touches every aspects of our life but we are largely ignorant of it A general reader has access to many popular books in the various areas of physics and astronomy but in the area of chemistry there is virtually no accessible material One common perception is that chemistry is a difficult subject which is partially true

Napoleon's Chicken Marengo Andrew Uffindell, 2011-12-01 This remarkable work tells the story of Chicken Marengo and cuts through the tangle of myths that has sprung up around it Supposedly created on the evening of Napoleons victory at Marengo the dish rapidly conquered Paris and became a renowned symbol of French haute cuisine The author sets the dish in its context explaining the nail biting drama of Napoleons Marengo campaign and the remarkable frenzy of rejoicing unleashed in Paris by the news of his victory The author argues that the dish is part of a wider myth that Napoleon spun around the battle itself Uncomfortably aware of just how close he had come to disaster he rewrote the official account of Marengo Determined to exploit the political impact of the victory to the full he portrayed it as a masterly maneuver rather than a near defeat salvaged largely by luck Napoleons Chicken Marengo demonstrates the persistency of popular myth in shaping perceptions of pivotal events Uffindell sheds startling light on Napoleons extraordinary and yet elusive character and reveals just how effectively he spun a myth around the amount of food he ate in order to project a positive image of himself A whole cast of other unforgettable characters enlivens the story of Chicken Marengo from Napoleons bickering generals to celebrity chefs colorful adventurers acclaimed artists fabulously wealthy eccentrics and famous writers such as William Makepeace Thackeray
