The

Influence of Turbulence on Soil Erosion Gijs J. C. M. Hoffmans, 2012 This publication outlines the relevance of turbulence on the initiation of motion of soil and explains the interaction between the load and the resistance against erosion or the strength of the bed material The stability of stones sand clay and grass is discussed by using Newton s second law and a definition of the turbulence energy Usually the equilibrium scour depth caused by jets and at piers abutments is predicted by applying empirical relations This publication discusses a scour approach which is based on two steps First a control volume that represents the scour hole is considered Secondly the relevant forces are determined Newton s second law is applied that is the sum of forces equals zero since the scour hole is in equilibrium This approach is discussed for different types of jet scour and scouring downstream of sills and near bridge piers and abutments [Aquananotechnology](#) David E. Reisner, T. Pradeep, 2014-09-24 The world s fresh water supplies are dwindling rapidly even wastewater is now considered an asset By 2025 most of the world s population will be facing serious water stresses and shortages [Aquananotechnology](#) Global Prospects breaks new ground with its informative and innovative introduction of the application of nanotechnology to the remediation of contaminated water for drinking and industrial use It provides a comprehensive overview from a global perspective of the latest research and developments in the use of nanotechnology for water purification and desalination methods The book also covers approaches to remediation such as high surface area nanoscale media for adsorption of toxic species UV treatment of pathogens and regeneration of saturated media with applications in municipal water supplies produced water from fracking ballast water and more It also discusses membranes desalination sensing engineered polymers magnetic nanomaterials electrospun nanofibers photocatalysis endocrine disruptors and Al₁₃ clusters It explores physics based phenomena such as subcritical water and cavitation induced sonoluminescence and fog harvesting With contributions from experts in developed and developing countries including those with severe contamination such as China India and Pakistan the book s content spans a wide range of the subject areas that fall under the aquananotechnology banner either squarely or tangentially The book strongly emphasizes sorption media with broad application to a myriad of contaminants both geogenic and anthropogenic keeping in mind that it is not enough for water to be potable it must also be palatable
