Sibling Loss:

The Empty Room Elizabeth DeVita-Raeburn, 2007-03-13 DeVita Raeburn does for bereaved siblings what Motherless Daughters did for mourning daughters shining light on a largely unexamined profound loss and offering help and hope for fellow survivors

Recovering from the Loss of a Sibling Katherine Fair Donnelly, 2000-07-24 A book of hope and healing Recovering From the Loss of a Sibling is the first book for those who have experienced the death of a brother or sister It addresses the many questions fears and feelings of surviving siblings of all ages such as Will this soon happen to me It should have been me Why wasn't it God must have punished me for the time when I was so mean to my brother My sister was my parents favorite and I don't seem to count to them At work they have no idea what I'm going through They think I'm just a sibling All the focus is on my parents not my grief When a brother or sister dies surviving siblings may receive little support or even recognition of their pain Parents are so grief stricken at the loss of a child that they often find themselves unable to cope with the needs of their surviving children With family and friends concentrating on the parents tragedy the suffering of siblings often goes unnoticed These intimate true stories provide valuable insight demonstrating that the reader is not alone and that others have gone through this devastating experience and have survived In these pages sisters and brothers share their innermost feelings wanting others to gain comfort from their experiences The book also serves as a compassionate aid to friends co workers teachers family members and the helping professions

Surviving Sibling Loss: The Invisible Thread that Connects Us Through Life and Death Dawn DiRaimondo, Psy.D., 2025-01-04 When author Dawn DiRaimondo PsyD lost her brother in 2004 she found only one book on sibling loss So she wrote the book she wished she had then Surviving Sibling Loss The Invisible Thread that Connects Us Through Life and Death is the gold standard of grief books helping not only people who are grieving but also their therapists partners and friends better support their loved ones The chapters are deliberately short and full of easy to find resources and the book can be read cover to cover or picked up and put down again This structure aids those who are struggling who fatigue and lose focus easily under the weight of their grief Dr DiRaimondo is a clinical psychologist whose specialties include working with clients who have experienced significant loss including the loss of children siblings spouses grandchildren and young parents Surviving Sibling Loss interweaves her personal and professional experience and knowledge of bereavement as well as the perspectives of fourteen individuals she interviewed who also lost siblings

Adult Sibling Loss Brenda Marshall, 2016-12-05 He was my best friend I feel like I've lost that one person I could always count on Siblings know each other in ways friends and other blood relatives do not They have shared bedrooms bathrooms holidays family milestones meals and a way of growing up that those outside the family can never fully understand The bond is intense complicated sometimes difficult often wonderful and absolutely irreplaceable When death interrupts what might have been a lovely lifelong connection the impact is tremendous And yet this loss is rarely the focus of research and is not well understood or recognised within society leaving many siblings searching

for appropriate support and validation This book gives readers the opportunity to experience the intensity of this relationship through the eyes of three bereaved siblings Their experiences both before and after loss are powerfully presented using a narrative style that allows the complexity and depth of their individual relationships to shine brightly The author a bereaved sibling herself artfully weaves her story throughout adding to the richness of the text Through these collective stories readers are invited to explore their own reactions and reflect on the many ways siblings affect each other over the long term Bereaved siblings clinicians medical professionals therapists social workers funeral directors religious leaders bereavement groups and anyone who supports or knows a bereaved sibling will find benefit in this book This highly readable text will both touch and inform readers

Sibling Loss Joanna H. Fanos, 2014-02-04 Despite the rise of clinical interest in posttraumatic stress disorder and traumatic stress in children there has been little attention paid to the impact of sibling death as a traumatic event Although there is much evidence that children suffer long lasting consequences of such trauma as divorce or the loss of a parent the loss of a sibling has not been the topic of substantial clinical or research attention The sibling relationship has only begun to receive research and theoretical attention The complexities of the sibling bond as it changes and evolves over the life span have only begun to be explored The death of a child has generally been considered one of the most stressful events encountered by families in our society The chronicity of illnesses such as cystic fibrosis is in a sense new an outgrowth of recent advances in medical treatment which have considerably extended the lives of children stricken with leukemia cystic fibrosis HIV infection diabetes and others This book explores the long term consequences of chronic illness followed by the death of a sibling on adult adjustment The illness and loss of the child will have a direct impact on the siblings dependent upon their own capacity to give meaning to its occurrence and to mourn the loss effectively In addition the sibling's world will be inexorably shaped by the handling of the illness and loss by the parents

Sibling Loss Elizabeth H. Pike,1997 The death of a sibling is generally recognized to be a significant and traumatic loss for the surviving sibling especially if the loss occurs in childhood Cain et al 1963 Davids 1993 Rosen 1985 1986 However little is known about the subjective experience of losing a sibling in early adulthood and what it means to mourn the death of an adult sibling This study was a qualitative exploration of the subjective experience of losing a sibling in early adulthood and of the mourning process that ensues This study attempted to understand the multiple meanings the death can come to have for the surviving sibling to examine how this loss becomes integrated into the life of the surviving sibling and to understand more fully the complexities of the mourning process of sibling death in early adulthood Counseling Adolescents Through Loss, Grief, and Trauma Pamela A. Malone,2016-02-19 Loss grief and trauma come into the lives of adolescents in many forms and with more frequency than the adults in their lives may realize Assessing the depth and nature of their emotions can be difficult adolescents are typically reluctant to show strong emotions and can be difficult to reach particularly when

they experience the untimely death of a loved one How best to work with a young person who may have trouble communicating their emotions even under the best of circumstances And what if he or she has learned about the death of a loved one or classmate from another peer rather than a family member What about gender differences and the influence of culture and family What role do cell phones text messaging and technologies such as Facebook play in the adolescent grief experience Adolescents use of technology creates unlimited access to friends support systems and information but news that spreads quickly without buffering effects can intensify the strength of the adolescent grief responses Counseling Adolescents Through Loss Grief and Trauma not only examines these issues it also provides clinicians with a wealth of resources and time tested therapeutic activities that are sure to become an indispensable part of any clinician s practice **Grief and Loss**

Eyetsemitan, 2022-04-22 Conventional grief models focus on the bereaved including actions that they need to take to get back to normalcy following the death of a loved one This book suggests that it might be helpful in the grieving process to focus on the deceased instead Research points to the benefits of altruistic acts and thoughts including improvements in mood Altruistic acts and thoughts also could be extended to the deceased who in death has experienced a loss as well By taking on the perspective of and being empathic toward the deceased a response shift occurs that could result in mood improvement and happiness in the bereaved The book provides guidelines for this alternative grief model in the death of a child of a teenager of a spouse partner and of a sibling and in multiple deaths and in persistent grief experience among others Based on motivational principles a workbook is also provided for monitoring progress in coping with bereavement Comprehension questions and additional readings are provided in each chapter to help the reader further explore the topic at hand This book would be useful in a course on death dying and bereavement to healthcare practitioners bereavement counsellors and to scholars in death dying and bereavement across different fields including psychology sociology social work public health and religion Most grief models focus on the bereaved including actions the survivor needs to take to get back to normalcy after a loss However in the grieving process it might be helpful if attention is shifted to the deceased instead The bereaved by doing things she or he perceives as pleasing to the deceased might receive healing and satisfaction in return Lisa Farino 2010 notes that there is no shortage of research pointing to the beneficial effects of focusing on others In a study by Carolyn Schwartz and Rabbi Meir Sendor 1999 lay people with a chronic disease were trained to provide compassionate unconditional regard to others who had the same illness The results showed that the providers of care and compassion reported better quality of life than the recipients of care and compassion even though both givers and receivers had the same disease The givers showed profound improvements in confidence self awareness self esteem depression and in role functioning The researchers emphasized the beneficial importance of response shift the shifting of internal standards values and concept definition of health and well being in dealing with one s own adversity Farino 2010 notes that this research is profound because in western culture the belief is that feeling happy tends to

be getting something for yourself There are biological origins to the notion that it's better to give than to receive Using the functional magnetic resonance imaging fMRI researchers were able to demonstrate a connection between brain activity and giving People who gave voluntarily and also for a good cause experienced more activation of the part of brain that controls for pleasure and happiness e.g. Harbaugh Mayr Burghart 2007 Studies show that about 7% of the US population experience complicated or prolonged grief disorder e.g. Kersting et al 2011 This is persistent grief that does not go away and many parents tend to experience this after the loss of a child In their study Catherine Rogers and colleagues 2008 found bereaved parents reporting more depressive symptoms poorer well being and more health problems after a child's loss almost 20 years later Survivors usually show concern about how their deceased loved ones felt prior to death and if happy or not in the afterlife e.g. Eyetsemitan Eggleston 2002 A study reported respondents used emotion discrete terms such as sad happy or angry to describe the faces of deceased persons The researchers suggested that the perceived emotional state of a deceased loved one could impact on the survivor's mourning trajectory e.g. Eyetsemitan Eggleston 2002 The bereavement model of placing focus on the deceased instead provides an alternative to existing bereavement models in helping the survivor to cope with a loss
