Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office, 1962 Includes Part 1 Number 1 Books and Pamphlets Including Serials and Contributions to Periodicals January-June **Seidman's Legislative History of Federal Income and Excess Profits Tax Laws, 1953-1939** Jacob Stewart Seidman, 2003 Themes of the American Civil War Susan-Mary Grant, Brian Holden-Reid, 2009-09-10 Themes of the American Civil War offers a timely and useful guide to this vast topic for a new generation of students. The volume provides a broad ranging assessment of the causes, complexities, and consequences of America's most destructive conflict to date. The essays written by top scholars in the field and reworked for this new edition explore how and in what ways differing interpretations of the war have arisen and explains clearly why the American Civil War remains a subject of enduring interest. It includes chapters covering four broad areas including The Political Front, The Military Front, The Race Front, and The Ideological Front. Additions to the second edition include a new introduction added to the current introduction by James McPherson, a chapter on gender as well as information on the remembrance of the war historical memory. The addition of several maps, a timeline, and an appendix listing further reading, battlefield statistics, and battle regiment general names focuses the book squarely at undergraduates in both the US and abroad. *Analysis of Cardiac Development* Rafael Beyar, Amir Landesberg, 2010-03-22 This volume, the result of three days of interactive sessions among world leaders in the cardiac sciences, summarizes the most up-to-date information about development and cardiogenesis, signaling in cell-based therapy, as well as developmental aspects of the formation of the embryonic heart, including the effect of mechanical load on differentiation. Other topics covered include signaling and repair strategies, cell and gene therapy for the treatment of post-myocardial infarction, signaling, vascularization methods in engineering embryonic cardiac tissue, and molecular methods to improve survival of human embryonic stem cell-derived cardiomyocytes. Developmental and evolutionary cardiology, novel strategies for treatment of atrial fibrillation, and channel molecular physiology in remodeling and hypertrophy, multiscale modeling for metabolism and flows, including force development mechanics of cardiac contraction and ATP supply and demand, aspects of aging, interactions, and interference. Aspects include fibroblast-myocyte capillary communications, non-uniformities in contraction, calcium channels as oxygen sensors, and epigenetics of heart failure, and macroscale phenomena and clinical aspects, including various clinical aspects of modern cardiology such as navigation methods for cardiac interventions and control of cardiac function by changes in energetic demand.
