

Machines, emptiness and misprints

... we cannot simply assume that good pictures
will be painted one day; we must take things
into our own hands! ...

After Cubism, Russian Constructivism, *de Stijl* and the developments at the Bauhaus – before World War II, and following Abstract Expressionism, Barnett Newman's paintings, Mark Rothko, Ad Reinhard in the U.S., "Zero" in Germany, "nul" in the Netherlands and "nouvelle tendance" in France – art found itself at the zenith of non-representationalism in 1970. Monochrome coloration, including black and white, predominated alongside visual concepts dealing with the laws of progression, system and structure. Young artists of that time confronted this tendency – among them Sigmar Polke, who resolved to develop a pictorial module that made it possible to paint EVERYTHING. To this end Sigmar Polke chose the matrix or grid structure used in newspaper printing. In doing so, he established a link to the character of the machine-produced pictures of the daily press as a medium for generating images.

Kasimir Malevich's Black Square (1914), revered as an icon of 20th-century non-representational art, actually did not contain a square, and in the course of reflection regarding non-representational art the geometric forms of square, triangle and circle later became suspect as figures during the 1970s.

In a scornful commentary on all rule-bound purism, Polke painted on a non-representational work in black letters and with a black corner on a white, square background the following words: "On order from above: paint the upper right corner black!" A great number of his most important paintings were completed after this polemical outburst, works that posed the question of the icon anew and widened its thematic scope. In terms of both technique and viewer impact, his paintings were composed of a large number of overlapping levels of media. In this way the artist attacks, counteracts and blasts away the substantive consensus of the work of art in an unpredictable way. In other words, by breaking up the unity of the picture, Polke heightens the contingency of the manifestation and thus achieves pictorial complexity with respect to both content and formal structure.

Polke's painting combines many different visual phenomena, achieving a surprising combination that does not necessarily underscore the substantive reference or sensual correlation suggested by the images but instead pursues them ad absurdum. This approach enables him to create a meta-sphere of the visible. The use of found, patterned backgrounds adds to the effect and multiplies the manifold levels of presentation. With lavishly applied opaque white paint, Polke neutralizes the underlying pictorial structure or structures – patterns – in order to establish zones of quiet or to preserve backgrounds for other levels of presentation, such as print characters, word fragments or projections. These, in turn, contribute at the same time to an ironizing effect and to both an obscuring of the pictorial structure and a compression of the substantive context.

The smallest unit Polke uses in his pictorial works is the grid or matrix point. The combination of many such points generates a line in a kind of ideal figure, which in turn shapes the surface, the two then combining to produce the figure. The grid point is the module through which Polke questions, comments upon and generates EVERYTHING. The point interests him not because of its denial of hierarchy or its serial potential but because he regards it from the standpoint of the smallest common pictorial denominator.
