Primary Central Nervous System Lymphoma Mihnea Zdrengea, 2017 Although non Hodgkin s lymphoma NHL is a frequent cancer worldwide primary central nervous system CNS lymphoma PCNSL is a rare presentation with an incidence of less than 0.5 per 100 000 persons years in the western world In the vast majority of cases it has the histology of a diffuse large B cell lymphoma DLBCL and is a hardly curable disease with high relapse risk Therapeutic options are limited by blood brain barrier penetration of drugs and because of its low incidence high grade evidence from large studies is lacking current management being based on reports on rather small cohorts The current standard first line treatment for PCNSL consists of high dose methotrexate HD MTX in combination with a variety of drugs and consolidation whole brain radiotherapy the latter being progressively replaced by chemotherapy For patients relapsing after first line treatment intensive chemotherapy with autologous stem cell support is a feasible and relatively safe salvage therapy In the present chapter we briefly discuss primary central nervous system lymphoma management and review current therapeutic options and evidence based recommendations We discuss the role of whole brain radiotherapy WBRT and new prospects to avoid this side effect ridden approach Also we will look at new

therapeutic approaches currently under investigation including immunotherapy

Malignant Lymphomas of the Nervous System K. Jellinger, F. Seitelberger, 2013-06-29 More than 150 years have passed since involvement of the nervous system in leukemia was first reported by BURNS while the possibility of the primary brain tumor derived from the lymphoreticular tissue was recognized much later BAILEY in 1929

described such neoplasms under the term perithelial sarcoma. Later these tumors of the nervous system have been variously designated as Perivascular of perithelial sarcomas, reticulum cell sarcomas or microgliomas as controversy has evolved and still exists on the definition of this group of neoplasms and on the nature of their cells of origin. Much of the unfortunate confusion concerning the neoplastic lesions attributed to microglia and other derivations of the RE system arose because their close relationship to extra neural cells has been ignored. On the other hand, communication in the field of malignant lymphomas has become increasingly difficult because of the terminologic maze and conceptual diversities of traditional morphological classifications that have limited valid comparisons. Although at present we are still far from a precise recognition of the basic features of lymphoproliferative processes and from a fairly general agreement on the terminology of non-Hodgkin lymphomas, there is encouraging evidence recently of some enlightenment on the nature of tumor cells that provides the basis for a reasonable and generally acceptable lymphoma classification.

Central Nervous System Tumors

César R. Lacruz, 2024-02-21. Covering all aspects of CNS tumors pathology, this book provides complete information on tumors of the brain and its coverings, sellar region, pineal region and cranial and paraspinal nerves according to 2021 WHO classification, 5th edition, including new entities as well as benign cysts and nonneoplastic disorders that are potentially misinterpreted as neoplasms. Throughout the book, emphasis has been placed on histopathologic characteristics and differential diagnosis, which are summarized in tables to make the explanation of certain topics clearer. This valuable text also includes the most recent clinical, pathological, histological, cytological and molecular knowledge in the field, enabling pathologists to arrive at the correct diagnosis and prepare actionable, useful reports. Since pathology is one of the most visually oriented medical specialties, the myriad of annotated images throughout has been evaluated carefully and includes neuroimaging studies, histology, cytology and immunohistochemical stains that support a morphologic discussion in which differential diagnosis and potential pitfalls are emphasized. *Central Nervous System Tumors: Diagnostic Pathology* provides a comprehensive guide of the current critical information needed to recognize, understand and interpret this demanding field of surgical neuropathology. It is designed with the needs of practicing surgical pathologists, pathologists in training and clinicians in mind.

Aggressive Lymphomas, Georg Lenz, Gilles Salles, 2018-12-27. This book summarizes current knowledge of the biology and molecular pathogenesis of aggressive lymphomas and reviews the state of the art in diagnostic and therapeutic strategies. The aim is both to provide the reader with a sound understanding of the very significant progress that has been achieved in the understanding and management of these malignancies over recent years and to facilitate appropriate choice of the therapeutic strategy in individual cases. The assessment of different prognostic parameters are clearly presented in order to permit effective risk stratification that impacts on treatment choice. Recent insights into lymphomagenesis are exemplified and may assist in identifying emerging therapeutic targets. The comprehensive and up-to-date nature of the book will make it an ideal reference for all physicians and researchers interested in lymphoma, including

clinicians from various medical specialties biologists pathologists radiologists and nuclear medicine specialist as well as students
