**AI\*IA 2005: Advances in Artificial Intelligence** Sara Manzoni, 2005-10-06 This volume collects the papers selected for presentation at the IX Congress of the Italian

Association for Artificial Intelligence (AI-IA) held in Milan at the University of Milano Bicocca September 21-23 2005. On the one hand, this congress continues the tradition of AI-IA in organizing its biannual scientific meeting; from 1989 on the other hand, this edition is a landmark in the involvement of the international community of artificial intelligence (AI) directly involving a broad number of experts from several countries in the Program Committee. Moreover, the peculiar nature of scientific research in artificial intelligence, which is intrinsically international and several consolidated international collaborations in projects and mobility programs allowed the collection and selection of papers from many different countries all around the world, enlarging the visibility of the Italian contribution within this research field. Artificial intelligence is today a growing complex set of conceptual, theoretical, methodological and technological frameworks offering innovative computational solutions in the design and development of computer-based systems. Within this perspective, researchers working in this area must tackle a broad range of knowledge about methods, results and solutions coming from different classical areas of this discipline. The congress was designed as a forum allowing researchers to present and discuss specialized results as general contributions to AI growth.

*Philosophy of Computer Science* William J. Rapaport, 2023-02-01. A unique resource exploring the nature of computers and computing and their relationships to the world. *Philosophy of Computer Science* is a university-level textbook designed to guide readers through an array of topics at the intersection of philosophy and computer science. Accessible to students from either discipline or complete beginners, to both the text brings readers up to speed on a conversation about these issues so that they can read the literature for themselves, form their own reasoned opinions, and become part of the conversation by contributing their own views. Written by a highly qualified author in the field, the book looks at some of the central questions in the philosophy of computer science, including: What is philosophy for readers who might be unfamiliar with it? What is computer science and its relationship to science and to engineering? What are computers computing algorithms and programs? Includes a line-by-line reading of portions of Turing's classic 1936 paper that introduced Turing Machines, as well as discussion of the Church-Turing Computability Thesis and hypercomputation challenges to it. How do computers and computation relate to the physical world? What is artificial intelligence and should we build AIs? Should we trust decisions made by computers? A companion website contains annotated suggestions for further reading and an instructor's manual. *Philosophy of Computer Science* is a must-have for philosophy students, computer scientists, and general readers who want to think philosophically about computer science.

**Smart STEM-Driven Computer Science Education** Vytautas Štuikys, Renata Burbaitė, 2018-06-28. At the centre of the methodology used in this book is STEM learning variability space that includes STEM pedagogical variability, learners' social variability, technological variability, CS content variability, and interaction variability. To design smart components, firstly the STEM learning variability space is defined for each component separately, and then model-driven approaches are applied. The theoretical basis includes feature-based modelling and model transformations at the top specification level and heterogeneous meta-programming techniques at the

implementation level Practice includes multiple case studies oriented for solving the task prototypes taken from the real world by educational robots These case studies illustrate the process of gaining interdisciplinary knowledge pieces identified as S knowledge T knowledge E knowledge M knowledge or integrated STEM knowledge and evaluate smart components from the pedagogical and technological perspectives based on data gathered from one real teaching setting Smart STEM Driven Computer Science Education Theory Methodology and Robot based Practices outlines the overall capabilities of the proposed approach and also points out the drawbacks from the viewpoint of different actors i e researchers designers teachers and learners
