Wallace, 1978 *Mycotoxins and Animal Foods* DUPLICATE Smith, Rachel Henderson, 1991-07-23 The ingestion of feed containing mycotoxins has serious adverse effects on the health of farm animals contributing to reduced weight gain lower reproductivity damage to the immune system severe illnesses and even death Mycotoxins formed in animal feedstuffs depend on the presence of specific strains of filamentous fungi or molds and are strongly influenced by environmental factors such as temperature and humidity This book considers the biological nature of mycotoxin formation the chemical and biological methods of analysis as well as the extensive range of substrates capable of supporting the growth of toxigenic fungi The book also provides extensive coverage of the mycotoxicoses of farmed animals and the current state of research into the control and detoxification of mycotoxins All researchers interested in mycotoxins and their effects on animals will find important information in this book **Human Health and the Environment--some Research Needs** United States. Task Force for Research Planning in Environmental Health Science, 1977 **Human Health and the Environment** Second Task Force for Research Planning in Environmental Health Science (U.S.), 1977 **Handbook of Naturally Occurring Food Toxicants** Miloslav Rechcigl, 2018-02-01 In the last decade an increased concern has been voiced against various environmental hazards particularly chemicals that may cause harm to humans or animals Numerous studies which have dealt with this subject invariably have focused on chemical contaminants of some component of a food chain In contrast much less attention has been paid to the potentially harmful substances that may occur in foodstuffs naturally The purpose of this Handbook is to sensitize the reader to this problem and to provide a systematic overview of the most important naturally occurring food toxicants The Handbook should be of interest to anybody who is concerned with nutritive and health aspects of food Inasmuch as many of the discussed toxicants can be removed or destroyed by a suitable method of food processing it should be of special value to food technologists **Advances in Fig Research and Sustainable Production** Moshe A. Flaishman, Uygun Aksoy, 2022-05-25 The common fig *Ficus carica* L is one of the oldest fruits domesticated by humans and is native to southwest Asia and the Mediterranean

Figs have been associated with health and prosperity since ancient times They are rich in fibre potassium calcium and iron as well as being an important source of vitamins amino acids and antioxidants In recent years increased consumption has caused fig production to shift to new countries such as Mexico Brazil India and China However fig is a challenging fruit crop to grow It is susceptible to insect pests and diseases as well as injuries from abiotic stress during fruit development and ripening As a delicate fruit it also requires complicated postharvest procedures and climate change presents additional challenges This volume serves as a comprehensive reference for current and future practices of fig production consumption research and innovation and is essential for academic researchers and those involved in research and development in the fig industry
