Radionuclide Imaging In Drug Research:

Radionuclide Imaging in Drug Research Clive G. Wilson, 2012-12-06 The use of gamma emitting radionuclides for diagnostic imaging in nuclear medicine has been established for many years Sophisticated gamma ray detecting camera systems and computer links enable the clinical investigator to image different regions of the body and to quantify organ function Parallel developments have also occurred in the field of radiopharmaceuticals and today a wide range of products is available that will exhibit specific uptake within target tissues following parenteral administration For example radioiodide is taken up by the thyroid and iodinated fatty acids can be used to image the myocardium Labelled antibodies have been used with success to target certain tumours The concept of targeting has also been considered by pharmaceutical scientists who wish to deliver drugs rather than radionuclides to specific sites in the body The systems that have been employed are often physically similar to those used as radiopharmaceuticals for example colloids aerosols and liposomes Furthermore pioneering work by Digenis and others in the United States States and by Alpsten and co workers 1976 in Sweden had demonstrated the potential of gamma scintigraphy for investigating the fate of tablets and capsules in the gastrointestinal tract of man in a non invasive way In 1979 the Biopharmaceutics Research Group at Nottingham together with academic pharmacists from Manchester held a one day symposium at Nottingham University to discuss how radio nuclides could be used in drug formulation studies to provide better approaches for the delivery of drugs to their sites of action

Nuclear Imaging in Drug Discovery, Development, and Approval BURNS, 2012-12-06 It is the purpose and business of the pharmaceutical industry to discover develop and make available drugs for the care of the sick The purpose of universities and national laboratories is to provide people and scientific knowledge that can help in the process This book presents the combined efforts of scientists from the drug industry academic laboratories and national laboratories to describe advances in radiotracer technology in studies on experimental animals and living human beings The authors believe that the technology is now ready for widespread application in the pharmaceutical industry The goal of this book is to help bring this about The field of Nuclear Medicine is based on the concept that if treatment of disease is chemical the patient's diagnosis should be chemical Anatomy and histopathology have been the principle basis for making a diagnosis Histopathologic data suffer from being descriptive subjective not quantifiable and based on the study of dead tissue The era of histopathology as the dominant concept in medical practice is coming to an end Histopathologic findings are often heterogeneous and a single biopsy will at times not reveal the true nature of the disease such as the grading of malignancy Far greater accuracy of staging of disease and in the planning of treatment is possible through chemistry as well as by making possible a more suitable selection of a histological biopsy site

Nuclear Imaging in Drug Discovery, Development, and Approval Hugh Donald Burns, 1993 *Nuclear Medicine in Pharmaceutical Research* M. Frier, A C Perkins, 2002-04-12 This text defines the role and scope of nuclear medicine imaging techniques gamma scintigraphy in pharmaceutical research giving information from clinical trial data

Borchardt, Arnold J. Repta, Valentino J. Stella, 2012-12-06 This book is based on the proceedings of the symposium entitled Directed Drug Delivery A Multidisciplinary Problem which was held in Lawrence Kansas on October 17-19 1984 The purpose of the symposium and this book is to focus on the multidisciplinary nature of drug delivery Development of a successful drug delivery system requires contributions from various scientific disciplines including pharmaceutical chemistry analytical chemistry medicinal chemistry biochemistry pharmacology toxicology and clinical medicine The contents of this volume illustrate the importance of the various disciplines in identifying the problems and approaches for the development of a rational and effective drug delivery system Thus the information provided herein will be of value not only to the pharmaceutical chemists who are responsible for dosage form design but also to the pharmacokineticists pharmacologists and clinicians involved in biological evaluation of drug delivery systems The volume should also be of interest to the analytical chemists who must provide technology to quantitatively evaluate drug delivery Additionally this work will also interest the biochemists and medicinal chemists involved in drug discovery since the drug delivery system often plays a major role in determining the success or failure of a new drug entity Each speaker at the symposium was requested to contribute a chapter reviewing the contribution of their major discipline to the development of a successful drug delivery system **Progress in Radiopharmacy** P.H. Cox, Steven J. Mather, C.B. Sampson, C.R. Lazarus, 2012-12-06 The contents of this volume are based upon presentations made to the Second European Symposium on Radiopharmacy and Radiopharmaceuticals which was held in St Catharine's College Cambridge in March 1985 This meeting was organized by the Radiopharmacy Group of the British Nuclear Medicine Society under the auspices of the European Joint Committee on Radiopharmaceuticals of the ENMS SNME The Joint Committee acknowledges the special effort which was made by the local organizers to prepare this meeting the quality of which is undoubtedly reflected in the proceedings The wide ranging aspects of Radiopharmacy are reflected in this volume which not only deals with specialized topics such as aerosols and biodistribution studies but which also deals with the professional aspects of Radiopharmacy Practice We are of the opinion that this book complements earlier publications to give an ongoing picture of the practice of Radiopharmacy and the state of the art in Europe As well as acknowledging the contribution of the British Radiopharmacists I would also mention the support of my co chairman Prof Dr M G Woldring the members of the Joint Committee and last but not least Mrs M Busker who prepared the camera ready copy P H Cox Coordinating Chairman European Joint Committee on Radiopharmaceuticals

Guiot,2018-01-18 Contributors were asked to emphasize their own experience with nanoparticles or microspheres They were also encouraged to provide aspects normally not stipulated in specialized reviews The objective was to produce a book which although written by specialists presented a subject which could be easily understood by people in different fields of life sciences Another goal was to set up a condensed work covering many aspects of nanoparticles and microspheres That is the reason why although mainly dealing with synthetic drug carriers the first chapter is related to preparation and physicochemical properties of nanoparticles constructed from natural polymers This is followed by two chapters involving the application of polymeric drug carriers in cancer therapy The second chapter extensively describes in vitro and in vivo behaviour of purely synthetic nanoparticles As ub the case of liposomes a problem can be that some particles are preferentially taken up by the reticuloendothelial system Magnetic drug carriers provide a partial answer to this problem since their tropism can be managed by an external magnet The third chapter is entirely devoted to this aspect A brief but original application of nanoparticles is given in the fourth chapter by reviewing their use in ocular therapy Finally two general applications of polymeric microspheres are discussed in chapters 5 and 6 Subject Index of Current Research Grants and Contracts Administered by the National Heart, Lung and Blood Institute National Heart, Lung, and Blood Institute,1979 *Atkinson's Principles of Clinical Pharmacology* Shiew-Mei Huang,Juan J.L.
