research and conference presentations on the Chinese language in the last decade have tended to focus on adult language processing. This book provides a comprehensive resource for the critical discussion of major issues in learning to read Chinese from a child acquisition perspective. The combined contributions from researchers in Asian studies, linguistics, psycholinguistics, psychology, cognitive psychology, reading and education inform international comparative studies of literacy by making apparent the features of the Chinese culture, language, writing system and pedagogy that may facilitate or impede the acquisition of literacy.

Reading Development in Chinese Children Catherine McBride-Chang, Hsuan-Chih Chen, 2003-12-30. This text reviews both similarities and unique cultural, linguistic and script differences of Chinese relative to alphabetic reading and even across Chinese regions. Chinese reading acquisition relies upon children's strongly developing analytic skills as highlighted here. These 16 chapters present state-of-the-art research on diverse aspects of Chinese children's reading development. This edited volume presents research on Chinese children's reading development across Chinese societies. Authors from China, Hong Kong, Singapore and Taiwan among others present the latest findings on how Chinese children learn to read. Reading acquisition in Chinese involves some parameters typically not encountered in some other orthographies such as English. For example, Chinese readers in different regions might speak different mutually unintelligible languages, be taught to read with or without the aid of a phonetic coding system and learn different scripts. This book both implicitly and explicitly considers these and other contextual issues in relation to developmental and cognitive factors involved in Chinese literacy acquisition. One of the clearest themes to emerge from this volume is that across regions, Chinese children, despite lack of explicit teaching of phonetic or semantic character components, learn to read largely by integrating visible print, sound and print meaning connections. Rather than learning to read Chinese characters by rote as is sometimes mistakenly believed, these children are analytic learners. Chapters in this book also cover such topics as Chinese children's reading comprehension, cognitive characteristics of good and poor readers and reading strategies of bilingual and bicultural readers. This book is a useful reference for anyone interested in understanding either developing or skilled reading of Chinese or for those interested in literacy learning across cultures.

This book showcases the significance of empirical studies on language and cognitive processing, particularly those emerging from the Taiwan research community, to illuminate the intricate nature of the language faculty enabled by the sophisticated computations of the brain. This book informs readers of crucial issues in the neurolinguistic literature and advances in neuroimaging technology and
