Regional Analysis:

Regional Analysis and Regional Policy William H. Miernyk, 1982 **Regional Analysis** Carol A. Smith, 2014-05-10
Regional Analysis Volume II Social Systems consists of studies on the general applications of the regional framework for analyzing socioeconomic systems as they exist and develop in territorial environmental systems This volume is concerned with social systems emphasizing the interrelationships among the institutional components of complex societies Marriage and kinship political organization formation of ethnic and cultural territorial groups and stratification systems that are affected by regional environmental variables are also covered This publication is beneficial to social and regional scientists geographers economists social anthropologists archeologists sociologists and political scientists intending to acquire knowledge of the implications of rural urban relations and regional settlement patterns **Methods of regional analysis** Walter Isard, 1966 **Regional analysis** United States. Department of the Interior, 1978 Methods of Interregional and Regional Analysis Walter Isard, Iwan J. Azis, Matthew P. Drennan, Ronald E. Miller, Sidney Saltzman, Erik Thorbecke, 2017-07-05 This landmark textbook introduces students to the principles of regional science and focuses on the key methods used in regional analysis including regional and interregional input output analysis econometrics regional and spatial programming and industrial and urban complex analysis gravity and spatial interaction models SAM and social accounting welfare analysis and applied general interregional equilibrium models The coherent development of the materials contained in the set of chapters provides students with a comprehensive background and understanding of how to investigate key regional problems For the research scholar this publication constitutes an up to date source book of the basic elements of each major regional science technique More significant it points to new directions for future research and ways interregional and regional analytic approaches can be fused to realise much more probing attacks on regional and spatial problems a contribution far beyond what is available in the literature **Spatial and Regional Analysis Methods in Forestry Economics** Alex Obiye, 1986 **Defining the Spatial Scale in Modern Regional Analysis** Esteban Fernández Vázquez, Fernando Rubiera Morollón, 2013-01-11 This book explores different approaches to defining the concept of region depending on the specific question that needs to be answered While the typical administrative spatial data division fits certain research questions well in many cases defining regions in a different way is fundamental in order to obtain significant empirical evidence The book is divided into three parts The first part is dedicated to a methodological discussion of the concept of region and the different potential approaches from different perspectives The problem of having sufficient information to define different regional units is always present This justifies the second part of the book which focuses on the techniques of ecological inference applied to estimating disaggregated data from observable aggregates Finally the book closes by presenting several applications that are in line with the functional areas definition in regional analysis Regional Analysis of Time-Fractional Diffusion Processes Fudong Ge, YangQuan Chen, Chunhai Kou, 2018-01-08 This monograph

provides an accessible introduction to the regional analysis of fractional diffusion processes. It begins with background coverage of fractional calculus, functional analysis, distributed parameter systems, and relevant basic control theory. New research problems are then defined in terms of their actuation and sensing policies within the regional analysis framework. The results presented provide insight into the control theoretic analysis of fractional order systems for use in real life applications such as hard disk drives, sleep stage identification and classification, and unmanned aerial vehicle control. The results can also be extended to complex fractional order distributed parameter systems and various open questions with potential for further investigation are discussed. For instance, the problem of fractional order distributed parameter systems with mobile actuators, sensors, optimal parameter identification, optimal locations, trajectory of actuators, sensors, and regional actuation/sensing configurations are of great interest. The book's use of illustrations and consistent examples throughout helps readers to understand the significance of the proposed fractional models and methodologies and to enhance their comprehension. The applications treated in the book run the gamut from environmental science to national security. Academics and graduate students working with cyber physical and distributed systems or interested in the applications of fractional calculus will find this book to be an instructive source of state of the art results and inspiration for further research.

Development of Coal Resources in Southern Utah: Regional analysis United States. Department of the Interior, 1979 Regional Analysis and the New International Division of Labor F. Moulaert, P.W. Salinas, 2013-03-09

Throughout the world a sense of crisis has settled in like a nightmare that refuses to leave. We look towards the horizon with apprehension. Major changes are afoot. Older industrial regions once rich and powerful stand by helplessly as factories close down. Poor countries are sliding into bankruptcy, unable even to feed their populations. In a few scattered enclaves called export platforms, new manufacturing plants spring up overnight; they employ predominantly young unmarried women and ship their products to unknown destinations overseas. Small companies are eaten up by bigger ones which in turn are absorbed by still larger conglomerates. Some industrial sectors are wiped out altogether. Tensions between states are increasing. More and more countries are coming under military rule. Torture and terrorism are turned into tools of official state policy. Civil wars are fought in Central America, Northern Africa, and Southeast Asia. International conflict flares up between Britain and Argentina, Iraq and Iran, Ethiopia and Somalia. Economic growth has slowed to a crawl. Inflation undercuts the livelihood of the poor. The small producer is ruined. It appears that we are involved in a major restructuring of the capitalist world. The problems are profits, capital accumulation, and efficiency in production. To make the indicators point up, whole regions are sacrificed, new technologies are put in place, and new locational patterns are created as the world is carved up into a new international division of labor.
