*Perspectives on Garden Histories* Michel Conan,1999 Garden history is a discipline of contested purposes *Perspectives on Garden Histories* contributes to a self critical examination of this emergent field of study at the same time offering an overview of its main achievements in several domains such as Italian and Mughal gardens and of the new kinds of investigation to which they have led In its early years garden history centered on architectural studies of garden design but in the 1960s the emphasis shifted from garden design to garden meaning The new paradigm considered gardens as complex works of art and demanded an extensive documentation of the historical context as well as of the figurative and discursive sources This approach in its turn was challenged by neo Marxist scholars who proceeded to view landscape appreciation as an ideological superstructure an outgrowth of agricultural production processes Garden designs and their histories can also be viewed as expressions of ideological conflicts in society Neither gardens nor their history can thus be studied independently of the social cultural and political movements that give prominence to the contested ideologies Gardens can be used to foster some ideologies or reflect a reaction against a social change Comparative research offers another fascinating approach exploring the relations between European landscape concepts and other cultural contexts and discussing issues of cultural dominance and interpretation The emergence of various perspectives has led to the incorporation of further questions into the domain of garden studies which has been moving in new directions and using new methods in search of an adapted theoretical framework This volume offers a striking view of changes taking place in the discipline

Historic Residential Suburbs David L. Ames,Linda Flint McClelland,2002 *Site Matters* Carol Burns,Andrea Kahn,2005-07-08 This volume through theoretical essays and empirically grounded pieces on Le Corbusier s designs contemporary suburbs and the planning agendas of the World Trade Center site provides theory on the appreciation of site and context in architecture

Forest and Garden Melanie Louise Simo,2003 How wild and managed or artificially arranged environments coexist has long been a matter of intense debate among foresters and landscape professionals

**The Language of Landscape** Anne Whiston Spirn,1998-01-01 This eloquent and powerful book combines poetry and pragmatism to teach the language of landscape Anne Whiston Spirn author of the award winning *The Granite Garden* *Urban Nature and Human Design* argues that the language of landscape exists with its own syntax grammar and metaphors and that we imperil ourselves by failing to learn to read and speak this language To understand the meanings of landscape our habitat is to see

the world differently and to enable ourselves to avoid profound aesthetic and environmental mistakes Offering examples that range across thousands of years and five continents Spirn examines urban rural and natural landscapes She discusses the thought of renowned landscape authors Thomas Jefferson Frank Lloyd Wright Frederick Law Olmsted Lawrence Halprin and of less well known pioneers including Australian architect Glenn Murcutt and Danish landscape artist C Th S rensen She discusses instances of great landscape designers using landscape fluently masterfully and sometimes cynically And in a probing analysis of the many meanings of landscape Spirn shows how one person s ideal landscape may be another s nightmare how Utopian landscapes can be dark There is danger when we lose the connection between a place and our understanding of it Spirn warns and she calls for change in the way we shape our environment based on the notions of nature as a set of ideas and landscape as the expression of action and ideas in place

Gardens, Knowledge and the Sciences in the Early Modern Period Hubertus Fischer,Volker R. Remmert,Joachim Wolschke-Bulmahn,2016-06-03 This volume focuses on the outstanding contributions made by botany and the mathematical sciences to the genesis and development of early modern garden art and garden culture The many facets of the mathematical sciences and botany point to the increasingly scientific approach that was being adopted in and applied to garden art and garden culture in the early modern period This development was deeply embedded in the philosophical religious political cultural and social contexts running parallel to the beginning of processes of scientization so characteristic for modern European history This volume strikingly shows how these various developments are intertwined in gardens for various purposes

*Garrett Eckbo* Marc Treib,Dorothee Imbert,2005 A beautifully illustrated consideration of the life and career of modernist landscape architect Garrett Eckbo

The American Lawn Georges Teyssot,1999 The site of political demonstrations sporting events and barbecues and the object of loving if not obsessive care and attention the lawn is also symbolically tied to our notions of community and civic responsibility serving in the process as one of the foundations of democracy
