Regional Hydrological Response To Climate Change:

Regional Hydrological Response to Climate Change J.A. Jones, Changming Liu, Ming-Ko Woo, Hsiang-Te Kung, 2012-12-06
This volume arises from the work of the International Geographical Union Working Group on Regional Hydrological Response to Climate Change and Global Warming under the chairmanship of Professor Changming Liu 1992-96. The book consists mostly of peer reviewed papers delivered at the Working Group's first three scientific meetings held in Washington D C 1992, Lhasa Tibet 1993 and Moscow 1995. These have been supplemented by a few additional chapters that have been specifically commissioned in order to give a well rounded coverage of the global and scientific aspects of the topic. As editors we have sought to balance state of the art reviews of methodology and regional research with detailed studies of specific countries and river basins. In the spirit of the IGU we have devoted particular effort to encouraging contributions from scientists in the non English speaking world. These chapters provide valuable evidence of recent climatic change and predictions of future hydrological impacts from parts of the world where little detailed work has been conducted hitherto. They provide much valuable information that is new and interesting to an international audience and is otherwise very difficult or impossible to acquire. It is hoped that the present volume will be not only a record of current achievements but also a stimulus to further hydrological research as the detail and spatial resolution of Global Climate Models improves. One notable aspect that emerges from a number of the contributions is that many though by no means all recent hydrological trends are in line with global warming predictions.

Subsurface Hydrological Responses to Land Cover and Land Use Changes Makoto Taniguchi, 2012-12-06
Since human beings first appeared on the earth we have changed land cover and land use for our own purposes such as conveniences and high productivity. As a result of the land cover and land use changes many serious environmental problems occur on the earth. Studying meteorological and hydrological effects of vegetation and land cover use changes helps us to understand the environmental changes and problems happening near the earth surface because the vegetation distributes the solar energy and water on the earth surface into atmosphere and geosphere. Subsurface hydrological responses to land cover and land use changes have drawn only regional environmental concerns although global change caused by biosphere change has been studied in various scientific fields. The changes in land cover and land use alter water solute and heat cycles in basins and elements of those balances including evapotranspiration, groundwater recharge rate, discharge rates into rivers or ocean and soil moisture content which are directly or indirectly related to the global environmental issues. Therefore the changes in biosphere may substantially alter the subsurface hydrological system. For instance increased groundwater recharge rates following clearing forest into grasses might be one consequence resulting in rising water tables and salinization.

Climate Change Signals and Response Chandra Venkataraman, Trupti Mishra, Subimal Ghosh, Subhankar Karmakar, 2018-07-06
This book provides a synthesis of research findings in terms of strategic knowledge outcomes regarding emergence of recent regional climate signals, implications for impacts assessment and mitigation and

adaptation response relevant in the Indian context The first part discusses evidence of climate change and its underlying scientific processes across India chiefly focusing on impacts that are already visible and attributable to anthropogenic activities The latter part deals with the responses to climate change highlighting the mitigation and adaptation strategies in various sectors and communities The book presents a concise interpretation distilling practical recommendations and policy prescriptions at national and sub national levels It serves as a reference point for understanding scientific advances and persisting uncertainty future vulnerability and response capacity of interlinked human and natural systems pertaining to India It is an excellent resource for policy makers and industry watchers in addition to the research fraternity **Floods**

Dennis J. Parker, 2014-08-27 Floods occur in most parts of the world and range from being welcomed annual occurrences to natural disasters which have countless physical and societal impacts Floods presents the most comprehensive collection to date of new research providing a rich body of theory and experience and drawing together contributions from over fifty leading international researchers in the field An extensive range of case studies covering major floods and regions prone to flooding worldwide are included *Regional Assessment of Climate Change in the Mediterranean* Antonio

Navarra, Laurence Tubiana, 2013-02-28 Volume 1 of a three volume final report describes synthesizes and analyzes the results of the four year Integrated Research Project CIRCE Climate Change and Impact Research Mediterranean Environment funded by the EU 6th Framework Programme Conducted under the auspices of the National Institute of Geophysics and Volcanology in Rome Italy CIRCE was designed to predict and to quantify the physical impacts of climate change in the Mediterranean and to assess the most influential consequences for the region's population This volume incorporates the first two parts of the report reviewing current knowledge of observed climate variability and trends in the Mediterranean and including descriptions of available temperature and precipitation station and gridded data sets **Global Climate Change**

and Freshwater Ecosystems Penelope Firth, Stuart G. Fisher, 2012-12-06 Global climate change is a certainty The Earth's climate has never remained static for long and the prospect for human accelerated climate change in the near future appears likely Freshwater systems are intimately connected to climate in several ways they may influence global atmospheric processes affecting climate they may be sensitive early indicators of climate change because they integrate the atmospheric and terrestrial events occurring in their catchments and of course they will be affected by climate change An improved predictive understanding of environmental effects on pattern and process in freshwater ecosystems will be invaluable as a baseline upon which to build sound protection and management policies for fresh waters This book represents an early step towards this improved understanding The contributors accepted the challenge to assume global warming of 2.5°C in the next century They then explored the implications of this scenario on various freshwater ecosystems and processes To provide a broader perspective Firth and Fisher included several chapters which do not deal expressly with freshwater ecosystems but rather discuss climate change in terms of causes and mechanisms implications for water resources and the use of remote

sensing as a tool for expanding studies from local to global scale *Remote Sensing of the Terrestrial Hydrologic Cycle* Qiuhong Tang, Youcun Qi, Zhihui Wang, Yun Pan, 2020-06-17 This book provides a practical introduction to remote sensing applications for detecting changes in the terrestrial water cycle and understanding the causes and consequences of these changes Covering a wide range of innovative remote sensing approaches for hydrological study this book contributes significantly to the knowledge base of hydrology in the Anthropocene i e global change hydrology It is an excellent reference for students and professionals in the fields of hydrology climate change and geography **Statistical Analysis and Stochastic Modelling of Hydrological Extremes** Hossein Tabari, 2019-10-28 Hydrological extremes have become a major concern because of their devastating consequences and their increased risk as a result of climate change and the growing concentration of people and infrastructure in high risk zones The analysis of hydrological extremes is challenging due to their rarity and small sample size and the interconnections between different types of extremes and becomes further complicated by the untrustworthy representation of meso scale processes involved in extreme events by coarse spatial and temporal scale models as well as biased or missing observations due to technical difficulties during extreme conditions The complexity of analyzing hydrological extremes calls for robust statistical methods for the treatment of such events This Special Issue is motivated by the need to apply and develop innovative stochastic and statistical approaches to analyze hydrological extremes under current and future climate conditions The papers of this Special Issue focus on six topics associated with hydrological extremes Historical changes in hydrological extremes Projected changes in hydrological extremes Downscaling of hydrological extremes Early warning and forecasting systems for drought and flood Interconnections of hydrological extremes Applicability of satellite data for hydrological studies *Hydro-Meteorological Extremes and Disasters* Manish Kumar Goyal, Anil Kumar Gupta, Akhilesh Gupta, 2022-10-29 The edited book provides both fundamentals as well as key factors of climate change extreme events and disaster risk management It systematically describes the integrated risk of various hydro meteorological extreme events The book brings together broad range of topics including basic concepts exposure risk resilience and vulnerability In addition it also analysis the impact of various disaster events on bio diversity local communities ecosystem and agricultural food production The motive is to define remediation strategies in the fields of resilient infrastructures communication strategies and immediate public participation The book is presented in four parts where part 1 familiarizes with fundamentals of hydro meteorological based disasters Part 2 focuses on risk and vulnerability analysis Part 3 focuses on risk remediation options and part 4 suggests the role of sustainable planning framework on disaster risk management This volume is of interest and use to professionals and researchers working in climate change atmospheric sciences and disaster management **Climate Change 2014 - Impacts, Adaptation and Vulnerability: Part B: Regional Aspects: Volume 2, Regional Aspects** Intergovernmental Panel on Climate Change (IPCC), 2014-12-29 This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change IPCC will again form the standard

reference for all those concerned with climate change and its consequences including students researchers and policy makers in environmental science meteorology climatology biology ecology atmospheric chemistry and environmental policy

Environmental Sustainability in the Mediterranean Region Carla Sofia Santos Ferreira, Georgia Destouni, Zahra Kalantari, 2024-09-04 The book provides a cross sectoral assessment of the most relevant environmental challenges in the Mediterranean region including land and water degradation water and food security and solution opportunities for these It also discusses main change drivers such as changes in climate land use population demographics and technology Additionally the book explores improved management participatory planning and nature based strategies and measures for meeting the key environmental challenges e g restoring degraded areas and improving land management in different land uses e g forest coastal and urban areas Finally the book addresses needs and opportunities to improve governance and partnerships for assuring sustainable development in the Mediterranean region

Greenhouse: Planning for Climate Change GI Pearman, 1988-01-01 It is important for the reader to understand clearly the objectives of these papers They are not an attempt to provide accurate predictions of what is going to happen in Australia over the next few decades Rather they represent sensitivity studies designed to illustrate to what extent we as a nation are dependent on the climate and likely to be affected by climatic change and attempts to develop the techniques for such sensitivity analyses For this the climate scenario reproduced in the Appendix to this volume was a key **Climate Change 2014 - Impacts, Adaptation and Vulnerability: Regional Aspects** Christopher B. Field, Vicente R.

Barros,2014-12-29 This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change IPCC will again form the standard reference for all those concerned with climate change and its consequences including students researchers and policy makers in environmental science meteorology climatology biology ecology atmospheric chemistry and environmental policy

Remote Sensing for Natural Resources Management & Monitoring Mahesh Gaur,C.B. Pandey,R.K. Goyal,2016-10-01 The book attempts to match user need to the level of technology required for management planning and monitoring of natural resources It provides clear guidance on the reliability accuracy and cost of applications Editors believe that this endeavour shall provide a valuable scientific basis to students and researchers to address the future challenges in natural resources monitoring and management Accurate inventory assessment and periodic monitoring of resources will enable the policy makers to keep an eye on optimal utilization of resources and development process to take timely interventions We further hope this book will be a valuable reference and provide practical guidance for all who work towards the goal of the sustainable and judicious use of resources

Global Hydrology J. A. A. Jones, 2014-06-03 Global Hydrology illustrates in detail the growing importance of understanding hydrological processes and pathways as a means of effective and safe management of water resources. It describes current management practices and past environmental impact. It analyses the options for improving water supply and protecting the environment, emphasizing the need for international collaboration in a changing societal and environmental context. *Integrated Assessment of Water Resources and Global Change* Eric Craswell, Mike Bonnell, Deborah Bossio, Siegfried Demuth, Nick van de Giesen, 2007-04-05 This book presents papers from an international conference held in Bonn, Germany, in February 2005 that dealt with integrated water resources management in industrialized and developing countries. The papers detail such emerging concepts as blue and green water, virtual water, the water footprints of nations, multi-agent modeling, linkages between water and biodiversity, and social learning and adaptive management.
