Regulating The Liabilities Of Agricultural Biotechnology:

Regulating the Liabilities of Agricultural Biotechnology Stuart Smyth, 2004 This book examines how government industry and society interact to reach a level of regulation that is deemed satisfactory for the newly emerged transformative technology that is agricultural biotechnology It considers issues of risk and trust surrounding genetically modified plants for the production of food and pharmaceuticals It describes how regulations have been produced to manage or in some cases ignore the risks from GM products The scope is international and the book makes a significant contribution to the literature in this growing field of interest

Regulating Agricultural Biotechnology Richard E. Just, Julian M. Alston, David Zilberman, 2006-12-26 This book presents the first thorough economic analysis of current agricultural biotechnology regulation The contributors most of whom are agricultural economists working either in universities or NGOs address issues such as commercial pesticides the costs of approving new products liability benefits consumer acceptance regulation and its impacts transgenic crops social welfare implications and biosafety

Regulation of Agricultural Biotechnology: The United States and Canada Chris A. Wozniak, Alan McHughen, 2012-10-05 Agricultural biotechnology takes many forms and applications with the number and diversity of products ever increasing With this rapid development regulatory authorities have sought to keep pace through regulatory adjustments and advances to ensure the safe and beneficial use of this critical technology The regulatory systems for the U S and Canada are not static and must evolve in order to maintain relevance efficiency and applicability to the challenges encountered The diverse authors drawn from the biotechnology industry academia government research and regulatory agencies offer their perspectives of the historical and current system and suggest where it can be improved in the future Based upon vast experience interacting with the regulatory system the editors and authors offer demystifying views of the US and Canadian regulatory structures and how they came to be We know of no other effort to present the biotechnology regulatory systems of the US and Canada in an open forum which will benefit those in the regulated community as well as those charged with oversight of the products of biotechnology and ultimately the consumer

Biotechnology Regulation and Trade Stuart J. Smyth, William A. Kerr, Peter W. B Phillips, 2017-03-02 This book discusses the regulatory and trade challenges facing the global adoption of biotechnological products and offers strategies for overcoming these obstacles and moving towards greater global food security The first section of the book establishes the context of the conflict discussing the challenges of global governance international trade and the history of regulation of genetically modified GM crops In this section the authors emphasize the shift from exclusively science based regulation to the more socio economically focused framework established by the Cartagena Protocol on Biosafety which was adopted in 2000 The second section of the book provides a snapshot of the current state of international GM crop adoption and regulation highlighting the US Canada and the EU The final section of the book identifies options for breaking the gridlock of regulation and trade that presently exist This book adds to the current literature by providing new information about

innovative agricultural technologies and encouraging debate by providing an alternative to the narratives espoused by environmental non governmental organizations This book will appeal to students of economics political science and policy analysis as well as members of regulatory agencies and agricultural industry firms Regulation of Genome Editing in Plant Biotechnology Hans-Georg Dederer,David Hamburger,2019-08-16 This book provides in depth insights into the regulatory frameworks of five countries and the EU concerning the regulation of genome edited plants The country reports form the basis for a comparative analysis of the various national regulations governing genetically modified organisms GMOs in general and genome edited plants in particular as well as the underlying regulatory approaches The reports which focus on the regulatory status quo of genome edited plants in Argentina Australia Canada the EU Japan and the USA were written by distinguished experts following a uniform structure On this basis the legal frameworks are compared in order to foster a rational assessment of which approaches could be drawn upon to adjust or to completely realign the current EU regime for GMOs In addition a separate chapter identifies potential best practices for the regulation of plants derived from genome editing *The Regulation of Agricultural Biotechnology* Robert E. Evenson,V. Santaniello,2004-03-29 The regulatory systems in place prior to the development and expansion of agricultural biotechnology are still responding to this new form of technology Such systems include trade law intellectual property law contract law environmental regulations and biosafety regulations This book reviews these regulatory changes and consists of 24 chapters developed from papers presented at a conference of the International Consortium on Agricultural Biotechnology Research held in Italy in July 2002 It primarily considers the relationship between these changes and innovation market development and international trade **Declining International Cooperation on Pesticide Regulation** May T. Yeung,William A. Kerr,Blair Coomber,Matthew Lantz,Alyse McConnell,2017-07-18 This Palgrave Pivot investigates barriers to international agricultural trade caused by a lack of standardized maximum residue levels MRL for pesticides Given the preponderance of pesticide use in food production and the increasing disruptions to trade a better understanding of the reasons for the decline in international cooperation the trade impacts and potential solutions is critical This volume will contribute to that understanding Through an analysis of the economics of MRL regulatory harmonization select case studies and a look at incentives and disincentives for government agencies and regulators the authors move the conversation beyond the theoretical and into current practices and advice for creating workable solutions This Pivot is a valuable resource for those concerned with food security trade policy agricultural production and export supply chains as well as those interested in broader issues related to science policy and societal trends **Biotechnology, Legislation and Regulation** ,1996 **Socio-Economic Considerations in Biotechnology Regulation** Karinne Ludlow,Stuart J. Smyth,José Falck-Zepeda,2013-12-03 Within the context of the Convention on Biological Diversity CBD the Cartagena Protocol on Biosafety CPB was established as an implementing agreement The CPB is an international agreement establishing the rights of recipient countries to be notified of and to approve or reject the

domestic import and or production of living modified organisms LMOs Decisions regarding import production are to be on the basis of a biosafety assessment Article 26 1 of the CPB allows for the optional inclusion of socio economic considerations SECs into that biosafety assessment process This book compiles expert assessments of the issues relevant to SEC assessment of LMOs and fundamental for decisions regarding whether to undertake such assessments at all It includes an overview of the inclusion of SEC assessment in the regulation of LMOs that looks at the rationale for the inclusion of SECs in the context of the existing science based risk assessment systems This book reviews the various factors that can and have been suggested for inclusion in SEC assessment and provides a meaningful dialogue about the contrasts benefits and tradeoffs that are and will be created by the potential move to the inclusion of SECs in the regulation of LMOs making it of interest to both academics and policy makers

The Regulation of Genetically Modified Organisms Luc Bodiguel, Michael Cardwell, 2010 The regulation of genetically modified organisms GMOs continues to generate controversy On the one hand they are vital to ensuring food security on the other hand consumer resistance persists This volume brings together scholars from across the globe to examine the regulation of GMOs from their own national and regional perspectives

Biotechnology: Legislation and Regulation Scott A. Leonard, Raymond Dobert, 1997-02 Bibliography of 323 citations in English

Governing Transformative Technological Innovation Peter W. B. Phillips, 2007-01-01 New technologies often appear to be beyond the control of any governing systems This is especially true for transformative technologies This book examines the deep governing structures of transformative technology and innovation in an effort to identify which actors can be expected to act when under what conditions and to what effect

The Nexus of Law and Biology Barbara Ann Hocking, 2016-02-17 Although law and science have interacted for centuries today their interactions pose enormous challenges These challenges are reflected in issues ranging from reproductive technology and resource conservation to genetic technology and biological warfare The emerging dialogue is complex and requires an ongoing re thinking of general principles such as expert biological evidence which features in a wide range of legal contexts and including medical law torts crime and intellectual property Studying the many ways in which law and biology come together in many areas of contemporary life The Nexus of Law and Biology New Ethical Challenges explores the juridical uses of biological sciences to illuminate key issues and contemporary intersections arguing that each of several disciplines must communicate with one another recognizing a common ground in ethics Featuring an impressive list of contributors this book is an invaluable reference for legal scholars students practising lawyers and scientists engaged with the legal system

EU Regulation of GMOs Maria Lee, 2009-01-01 Lee s book is a valuable addition to the literature for those wishing to broaden their understanding of the range of legal disciplines involved in GMO regulation Tracey Epps European Review of Agricultural Economics Maria Lee s work is a successful attempt to illustrate the big legal issues behind the regulation of genetically modified organisms GMOs This study which is thorough and well documented is particularly welcomed in view of the need

for a dialogue between different legal specialisms for which GMOs are a relevant area of research The book provides a very interesting and insightful examination of the legal problems raised by GMOs I would warmly recommend its reading to academics and practitioners who are interested in European risk regulation law environmental law biotechnology and trade law Sara Poli European Law Review

Genetically modified organisms GMOs are an extraordinary innovation They raise great expectations of economic prosperity and improved capacity to address pressing problems of poverty and environmental degradation whilst simultaneously raising great concerns about the type of social and physical world they promise Finding space in regulation to consider the full range of issues provoked by GMOs is a huge challenge This book explores the EU s elaborate regulatory framework for GMOs which extends far beyond the process of their authorisation or not for the EU market embracing disparate legal disciplines including intellectual property consumer protection and civil liability The regulation of GMOs also highlights questions of EU legitimacy in a context of multi level governance both internally towards national and local government and externally in a world where technologies and their regulation have global impacts This book will be of interest to academics and students in both law and social sciences as well as practising lawyers and policy makers It addresses questions that are significant for those involved in environmental or food issues as well as specialists in GMOs

Regulating Genetically Modified Crops in View of Environmental Risks Ancui Liu, 2022-05-25 This book analyzes international and Chinese regulatory approaches addressing environmental risks that may be caused by GM crops and examines how China implements its international obligations in its policies and laws Using the legal doctrinal method the book discusses the precautionary principle and the public involvement principle as well as several legal measures at the international law level and in Chinese law It observes that legal principles and measures as provided for in China s GMO legal framework have generally implemented the international obligations regarding the prevention of environmental risks that may be caused by the cultivation of GM crops and related activities However the book argues that Chinese law lacks an explicit codification of the precautionary principle and the same is true with regard to public participation the regulatory framework lacks specific obligations It concludes that future research should focus on the application and enforcement of the relevant Chinese legislation and that it is also important to investigate how the environmental risks that may be caused by new techniques such as genome editing techniques could be prevented given the experience gained by regulating the cultivation of GM crops and related activities

Regulating and Managing Food Safety in the EU Harry Bremmers, Kai Purnhagen, 2018-08-01 This book analyses EU food law from a regulatory economic and managerial perspective It presents an economic assessment of strategies of food safety regulation and discusses the different regulatory regimes in EU food law It examines the challenges of food safety in the internal market as well as the regulatory tools that are available The book s generic theorising and measurement of regulatory effects is supplemented by detailed analysis of key topics in food markets such as health claims enforcement strategies and induced risk management at the level of the organizations producing food

The regulatory effects discussed in the book range from classical regulatory analysis covering e.g. effects of ex ante versus ex post regulation and content related versus information related regulation to new regulatory options such as behavioral regulation. The book takes as its premise the idea that economic considerations are basic to the design and functioning of the European food supply arena and that economic effects consolidate or induce modification of the present legal structures and principles. The assessments, analyses and examination of the various issues presented in the book serve to answer the question of how economic theory and practice can explain and enhance the shaping and modification of the regulatory framework that fosters safe and sustainable food supply chains.

Genes, Trade, and Regulation Thomas Bernauer, 2016-06-28
 Agricultural or green biotechnology is a source of growing tensions in the global trading system particularly between the United States and the European Union. Genetically modified food faces an uncertain future. The technology behind it might revolutionize food production around the world. Or it might follow the example of nuclear energy which declined from a symbol of socioeconomic progress to become one of the most unpopular and uneconomical innovations in history. This book provides novel and thought provoking insights into the fundamental policy issues involved in agricultural biotechnology. Thomas Bernauer explains global regulatory polarization and trade conflict in this area. He then evaluates cooperative and unilateral policy tools for coping with trade tensions. Arguing that the tools used thus far have been and will continue to be ineffective, he concludes that the risk of a full blown trade conflict is high and may lead to reduced investment and the decline of the technology. Bernauer concludes with suggestions for policy reforms to halt this trajectory, recommendations that strike a sensible balance between public safety concerns and private economic freedom so that food biotechnology is given a fair chance to prove its environmental, health, humanitarian and economic benefits. This book will equip companies, farmers, regulators, NGOs, academics, students and the interested public including both advocates and critics of green biotechnology with a deeper understanding of the political, economic and societal factors shaping the future of one of the most revolutionary technologies of our times.

When Cooperation Fails Mark A. Pollack, Gregory C. Shaffer, 2009-05-21
 The dispute over genetically modified organisms has brought the US and the EU into conflict. This book examines the dynamic interactions of domestic law and politics, transnational networks, international regimes and global markets through a theoretically grounded and empirically comprehensive analysis of the governance of GM foods and crops.
