Symposium, Society for General Microbiology, 1990 The tendency of a living organism to move to a more favourable environment is a natural but complex reaction involving the integration of sometimes conflicting environmental stimuli as well as a coordinated mechanical response The response of motile single cell organisms to environmental stimuli provides a useful model for understanding first of all how the environment is monitored and sensed and secondly how this information is processed to result in an integrated and coordinated response The volume looks at a large number of well studied examples of the chemotactic response in prokaryotes and eukaryotes and casts new light on how cells process information and react to their environment This fundamental response is of great importance in understanding one of the characteristic features of living organisms *Signals, Switches, Regulons, and Cascades* Society for General Microbiology. Symposium, Society for General Microbiology, 2002-04-18 Publisher Description **Biology of Salmonella** Filipe Cabello, Carlos Hormaeche, Pasquale Mastroeni, Letterio Bonina, 2012-12-06 Salmonella infections of man and animals continue to be a distressing health problem worldwide Far from disappearing the incidence of typhoid fever in developing countries may be far higher than we had imagined Salmonella food poisoning has increased to one of the major causes of gastroenteritis in the developed world in itself also an indication that animal salmonellosis is still a major cause for concern The situation requires a concerted multidisciplinary research effort in order to generate the new information and technology needed to assist in the control of these diseases This concept was the driving force behind the NATO Advanced Research Workshop on Biology of Salmonella held at Portofino Messina Italy May 11 15 1992 With additional support from the University of Messina Medeva Group Research UK and the Swiss Serum and Vaccine Research Institute the meeting brought together epidemiologists microbiologists molecular biologists immunologists and clinicians All the participants were actively working on different but related aspects of Salmonella and salmonellosis with most of the leading laboratories worldwide being represented The workshop provided an excellent opportunity for interdisciplinary consultation it is not often that the topic of Salmonella and salmonellosis is covered to such breadth and depth in one extended meeting Keynote addresses by invited speakers were interspersed with offered papers many by younger members of the scientific community and this volume presents the collated manuscripts of the lectures and extended summaries of the offered papers

Physiological Limitations and the Genetic Improvement of Symbiotic

Nitrogen Fixation F. O'Gara, S. Manian, J.J. Drevon, 2012-12-06 Rhizobium species involved in root nodule formation on legume plants are one of the best known groups of micro organisms The Rhizobium legume symbiosis continues to be of strategic importance particularly in the context of food production As the world population grows it is also necessary to have new developments taking place in crop improvement The development and application of new technologies in biological sciences over the past number of years have made the entire area of plant microbial interaction an exciting and challenging research area to be involved in In view of the importance of symbiotic nitrogen fixation it is not surprising that it still represents one of the priority areas for commercial development in agricultural biotechnology Since this symbiosis involves an association between procaryotic and eucaryotic partners it requires of necessity a coordinated and interdisciplinary approach It was in this spirit that this international conference was organised The scientific programme was designed to focus on physiological limitations affecting symbiotic nitrogen fixation and the potential for overcoming such limitations using genetic technologies Participants were drawn from contractants of the EEC DGVI Energy in Agriculture nitrogen fixation programme The scientific programme was also supplemented with invited scientists from Europe and North America to provide appropriate expertise on the various conference topics

Genetics of Bacterial Diversity

David A. Hopwood, Keith F. Chater, 2013-09-03 Genetics of Bacterial Diversity focuses on the rapidly developing field of non K12 bacterial genetics that is largely outside the scope of other texts The book begins with an introductory chapter that outlines the phylogenetic relationships of bacteria and the range of metabolic behavioral and developmental phenomena displayed by them Two chapters then review the genetic processes found in bacteria generally and discuss a range of genetic techniques used to analyze the various special systems described in the body of the book respectively Subsequent chapters deal with various special metabolic capabilities characteristic of certain groups of bacteria light production photosynthesis nitrogen fixation antibiotic production degradation of aromatic compounds and mercury resistance developmental processes of cell cycle associated motility sporulation and specialized colonial behavior four components of bacterial pathogenicity for animals and pathogenic and symbiotic interactions of bacteria with higher plants The final chapter explains some of the concepts and the progress being made in the application of population genetics to bacteria This book may be of interest to microbiologists wishing to catch up on the genetic basis of some of the classical phenomena of bacteriology and geneticists unfamiliar with some of the things that bacteria can accomplish
