The Metallurgy of Roman Silver Coinage Kevin Butcher, Matthew Ponting, 2015-04-02 The fineness of Roman imperial and provincial coinage has been regarded as an indicator of the broader fiscal health of the Roman Empire with the apparent gradual decline of the silver content being treated as evidence for worsening deficits and the contraction of the supply of natural resources from which the coins were made This book explores the composition of Roman silver coinage of the first century AD re examining traditional interpretations in the light of an entirely new programme of analyses of the coins which illustrates the inadequacy of many earlier analytical projects It provides new evidence for the supply of materials and refining and minting technology It can even pinpoint likely episodes of recycling old coins and when combined with the study of hoards hints at possible strategies of stockpiling of metal The creation of reserves bears directly on the question of the adequacy of revenues and fiscal health

Roman Finds Richard Hingley, Steven Willis, 2007-04-10 Studies on finds in Roman Britain and the Western Provinces have come to greater prominence in the literature of recent years The quality of such work has also improved and is now theoretically informed and based on rich data sets Work on finds over the last decade or two has changed our understanding of the Roman era in profound ways and

yet despite such encouraging advances and such clear worth there has to date been little in the way of a dedicated forum for the presentation and evaluation of current approaches to the study of material culture The conference at which these papers were initially presented has gone some way to redressing this and these papers bring the very latest studies on Roman finds to a wider audience Twenty papers are here presented covering various themes **British and Irish Archaeology** ,1994

The Roman Monetary System Constantina Katsari,2011-02-24 The Roman monetary system was highly complex It involved official Roman coins in both silver and bronze which some provinces produced while others imported them from mints in Rome and elsewhere as well as in the East a range of civic coinages This is a comprehensive study of the workings of the system in the Eastern provinces from the Augustan period to the third century AD when the Roman Empire suffered a monetary and economic crisis The Eastern provinces exemplify the full complexity of the system but comparisons are made with evidence from the Western provinces as well as with appropriate case studies from other historical times and places The book will be essential for all Roman historians and numismatists and of interest to a broader range of historians of economics and finance
