Flügel,2012-12-06 **Sedimentary Facies Analysis** A. Guy Plint,2009-04-13 This book celebrates the professional career of Harold Reading who has played a leading role in the development of the IAS and has been at the roots of the development of facies sedimentology as an art in itself and as a major tool in the broader field of geology This special collection of original research papers from Harold Reading's students covers the wide range of his research interests and reflects the power of facies sedimentology today State of the art research papers in the important field of facies sedimentology a festschrift to one of the great names in sedimentology **Practical Sedimentology** D.W. Lewis,D.M. Chilingarian,K.H. Wolf,1992-05-19 The present volume is an intellectual agglomeration covering a variety of topics in diagenesis It starts with the diagenesis of marine pore waters and soft sediment deformations followed by two chapters on sandstones one on climatic influence in terrestrial sandstone diagenesis and the other on the deep sea volcanoclastic sandstones Diagenesis of carbonates is treated next with one chapter on compactional diagenesis and another devoted to a case study Aymestry Limestone Beds UK There are two chapters on the origin and migration of oil a maturation of organic matter and b relation of diagenesis to mineralization and hydrocarbon reservoir development followed by a chapter on sedimentary ore genesis banded iron formation In conclusion there are two chapters on paleosols This book will be of interest to geologists geochemists and petroleum engineers Particulate Gravity Currents

W. D. McCaffrey, B. C. Kneller, J. Peakall, 2009-03-05 This volume arises from the conference Sediment Transport and Deposition by Particulate Gravity Currents held in the UK in 1998 The field of particulate gravity currents ranges from turbidity currents in the oceans lakes and reservoirs to pyroclastic density currents and avalanches debris flows and lahars grain flows powder snow avalanches effluent dispersal and ancient gravity current deposits Although the sub division of particulate gravity currents into discrete sub categories such as grain flows turbidity currents or debris flows provides a convenient descriptive shorthand it undermines the sense of process continuum needed to describe many natural flows The structure of this volume reflects an integrative aim with papers grouped by research approach The first section of the book contains six papers on theoretical and numerical modelling of a range of flow types The following four papers are focused upon combined theoretical and experimental modelling approaches The next section contains four papers describing experimental modelling and the final section includes five papers detailing field based studies The volume stands as a testament to the broad range of research carried out on particulate gravity currents and hints at the enhanced rate of progress that is likely to be achieved through further integrated studies If you are a member of the International Association of Sedimentologists for purchasing details please see <http://www.iasnet.org/publications/details.asp?code=SP31> **Cyclic and**

Event Stratification G. Einsele, A. Seilacher, 2012-12-06 Sedimentary Basins Gerhard Einsele, 2013-06-29 The modern geological sciences are characterized by extraordinarily rapid progress as well as by the development and application of numerous new and refined methods most of them handling an enormous amount of data available from all the continents and oceans Given this state of affairs it seems inevitable that many students and professionals tend to become experts in relatively narrow fields and thereby are in danger of losing a broad view of current knowledge The abundance of new books and symposium volumes testifies to this trend toward specialization However many geologic processes are complex and result from the interaction of many seemingly unrelated individual factors This signifies that we still need generalists who have the broad overview and are able to evaluate the great variety of factors and processes controlling a geologic system such as a sedimentary basin In addition this also means that cooperation with other disciplines in the natural sciences and engineering is increasingly important Modern text books providing this broad overview of the earth sciences are rare

McKenzie, 2012-04-10 This special publication Perspectives in Carbonate Geology is a collection of papers most of which were presented at a symposium to honor the 80th birthday of Bob Ginsburg at the meeting of Geological Society of America in Salt Lake City in 2005 The majority of the papers in this publication are connected with the study of modern carbonate sediments Bob Ginsburg pioneered the concept of comparative sedimentology that is using the modern to compare to and relate to and understand the ancient These studies are concerned with Bob's areas of passion coral reefs and sea level submarine cementation and formation of beach rock surface sediments on Great Bahama Bank and other platforms origin of ooids coastal sediments formation of

stromatolites impact of storms on sediments and the formation of dolomite The remainder of the papers apply the study of modern environments and sedimentary processes to ancient sediments Recent other publications of the International Association of Sedimentologists SPECIAL PUBLICATIONS 40 Analogue and Numerical Modelling of Sedimentary Systems From Understanding to Prediction Edited by P de Boer G Postma K van der Zwan P Burgess and P Kukla 2008 336 pages 172 illustrations 39 Glacial Sedimentary Processes and Products Edited by M J Hambrey P Christoffersen N F Glasser and B Hubbard 2007 416 pages 181 illustrations 38 Sedimentary Processes Environments and Basins A Tribute to Peter Friend Edited by G Nichols E Williams and C Paola 2007 648 pages 329 illustrations 37 Continental Margin Sedimentation From Sediment Transport to Sequence Stratigraphy Edited by C A Nittrouer J A Austin M E Field J H Kravitz J P M Syvitski and P L Wiberg 2007 549 pages 178 illustrations 36 Braided Rivers Process Deposits Ecology and Management Edited by G H Sambrook Smith J L Best C S Bristow and G E Petts 2006 390 pages 197 illustrations 35 Fluvial Sedimentology VII Edited by M D Blum S B Marriott and S F Leclair 2005 589 pages 319 illustrations REPRINT SERIES 4 Sandstone Diagenesis Recent and Ancient Edited by S D Burley and R H Worden 2003 648 pages 223 illustrations Please see inside the book for the full list of IAS publications Cover design by Code 5 Design For information news and content about Wiley Blackwell books and journals in Earth Sciences please visit www.earthpages.com Sedimentary Structures and Early Diagenetic Features of Shallow Marine Carbonate Deposits Robert V.
