functional role of seed banks in agricultural and natural ecosystems The book is aimed at advanced level students and researchers in the fields of seed science seed ecology and plant ecology *Seeds* M. ed FENNER,1992 **Seed Fate** J. E. Lambert,P. E. Hulme,S. B. Vander Wall,2005 This book presents current knowledge of seed fate in both natural and human disturbed landscapes from various regions of the world Habitats considered range from mountain and arid deserts in the temperate zone to savanna and lowland rainforests in tropical regions of the world Particular attention is paid to plant diversity conservation when seed removal is affected by factors such as hunting habitat fragmentation or intensive logging Contributors include leading scientists involved in research on seed ecology and on animal plant relationships from the perspective of both primary and secondary seed dispersal and predation *Seed Ecology* M.W. Fenner,2012-12-06 This book is about the regeneration of plants from seed under field conditions It attempts to give a reasonably balanced overview of the many aspects of this broad topic The first chapter introduces some general ideas about reproduction in plants Subsequent chapters deal with the early stages in the life of a plant from ovule to established seedling in a more or less chronological order The final chapter shows how the data on regeneration requirements of different species can be used to explain a number of important characteristics of whole plant communities The study of the ecological aspects of reproduction by seed touches on a range of issues of current interest in biology A discussion of seed size and number involves a consideration of the concepts of resource allocation life cycles and strategies The interactions between plants and animals seen in pollination seed dispersal and predation provide excellent material for the study of coevolution Investigations on regeneration from seed have greatly our understanding of the causes and maintenance of species added to diversity The reader will find that virtually all the experiments and field observations described in this book are conceptually very simple Many of them merely required numerous careful measurements **Dormancy and Low Growth States in Microbial Disease** Anthony R. M. Coates,2003-06-02 All cellular life forms can exist in replicating and non replicating states Organisms replicate only when the conditions are beneficial and when not replicating they concentrate on survival of these environmental stresses Many bacteria harmful to humans survive the period of infection in a low growth state This 2003 book addresses the basic science of microbial dormancy and low growth states putting this in the context of human medicine Such fundamental topics as bacterial growth and non growth culturability and viability are covered as well as survival of the host s immune response and inter bacterial signalling Following this introduction more medically focused topics are discussed namely antibiotic resistance arising during stationary phase biofilms the bacteria which cause gastric ulcers and tuberculosis as the classic persistent bacterial infection This book will interest graduate students and researchers in medical microbiology immunology and infectious disease medicine who are interested in bacterial dormancy in relation to disease *Seed Development and Germination* Jaime Kigel,2017-11-01 This text is intended for plant physiologists molecular biologists biochemists biotechnologists geneticists horticulturalists agromnomists and botanists and upper level undergraduate and

An Integrative Approach to Successional Dynamics Scott J. Meiners, Steward T. A. Pickett, Mary L. Cadenasso, 2015-03-26 Much of what is considered conventional wisdom about succession is not as clear cut as it is generally believed Yet the importance of succession in ecology is undisputed since it offers a real insight into the dynamics and structure of all plant communities Part monograph and part conceptual treatise An Integrative Approach to Successional Dynamics presents a unifying conceptual framework for dynamic plant communities and uses a unique long term data set to explore the utility of that framework The fourteen chapters each written in a nontechnical style and accompanied by numerous illustrations and examples cover diverse aspects of succession including community population and disturbance dynamics diversity community assembly heterogeneity functional ecology and biological invasion This unique text will be a great source of reference for researchers and graduate students in ecology and plant biology as well as others with an interest in the subject

Principles of Seed Science and Technology Lawrence O. Copeland, Miller F. McDonald, 2012-12-06 This Third Edition of Principles of Seed Science and Technology like the first two editions is written for the advanced undergraduate student or lay person who desires an introduction to the science and technology of seeds The first eight chapters present the seed as a biological system and cover its origin development composition function and sometimes nonfunction performance and ultimate deterioration The last seven chapters present the fundamentals of how seeds are produced conditioned evaluated and distributed in our modern agricultural society A new chapter on seed enhancement has been added to reflect the significant advancements made in the last 10 years on new physiological and molecular biology techniques to further enhance seed performance Because of the fundamental importance of seeds to both agriculture and to all of society we have taken great care to present the science and technology of seeds with the respect and feeling this study deserves We hope that this feeling will be communicated to our readers Furthermore we have attempted to present information in a straight forward easy to read manner that will be easily understood by students and lay persons alike Special care has been taken to address both current state of the art as well as future trends in seed technology We believe this Third Edition represents a new level in presenting information that appeals to advanced undergraduate students as well as to those desiring more fundamental information on seed form and function At the same time it continues to have the strengths of the first two editions in its readability as well as its comprehensive coverage of the broader area of seed

science and technology *Parasitic Orobanchaceae* Daniel M. Joel, Jonathan Gressel, Lytton J. Musselman, 2013-07-01 This book was written in response to significant recent advances in understanding the mechanisms of parasitism in the Orobanchaceae and breakthroughs in the control of the parasitic weeds *Striga* and *Orobanche*. It consists of 26 contributions by internationally recognized leading scientists. The main book chapters are grouped into two parts: Part I The Orobanchaceae and Their Parasitic Mechanisms; Part II The Weedy Orobanchaceae and Their Control. The first part provides cutting edge information on all key aspects of plant parasitism such as the structure development and function of the haustorium, nutrient transfer and the physiology of the parasite-host association, host reaction to parasitic plants, seed production and germination, the strigolactones and host-parasite signaling mechanisms, the parasite genome, phylogenetics, evolution and epigenetics, and ecology. Topics of the second part include the problem posed by the weedy parasites, population diversity and dynamics, molecular diagnosis of seed banks and detailed discussion of the various management strategies including agronomic, chemical and biotechnological approaches as well as host breeding for resistance, allelopathy and biological control. This book is intended for plant scientists, university lecturers and students, agronomists and weed specialists, breeders and farmers, extension personnel and experts in tropical and subtropical agriculture.

Animal-Mediated Dispersal in Understudied Systems Casper H. A. Van Leeuwen, José L. Tella, Andy J. Green, 2020-02-13 This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series; they are collections of at least ten articles all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area. Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: frontiersin.org/about/contact. *Seeds* Carol C. Baskin, Jerry M. Baskin, 2014-02-20 The new edition of *Seeds* contains new information on many topics discussed in the first edition such as fruit seed heteromorphism, breaking of physical dormancy and effects of inbreeding depression on germination. New topics have been added to each chapter including dichotomous keys to types of seeds and kinds of dormancy, a hierarchical dormancy classification system, role of seed banks in restoration of plant communities and seed germination in relation to parental effects, pollen competition, local adaptation, climate change and karrikinolide in smoke from burning plants. The database for the world biogeography of seed dormancy has been expanded from 3 580 to about 13 600 species. New insights are presented on seed dormancy and germination ecology of species with specialized life cycles or habitat requirements such as orchids, parasitic aquatics and halophytes. Information from various fields of science has been combined with seed dormancy data to increase our understanding of the evolutionary phylogenetic origins and relationships of the various kinds of seed dormancy and nondormancy and the conditions under which each may have evolved. This comprehensive synthesis of information on the ecology, biogeography and evolution of

seeds provides a thorough overview of whole seed biology that will facilitate and help focus research efforts. Most wide ranging and thorough account of whole seed dormancy available. Contains information on dormancy and germination of more than 14 000 species from all the continents even the two angiosperm species native to the Antarctica continent. Includes a taxonomic index so researchers can quickly find information on their study organisms and Provides a dichotomous key for the kinds of seed dormancy. Topics range from fossil evidence of seed dormancy to molecular biology of seed dormancy. Much attention is given to the evolution of kinds of seed dormancy. Includes chapters on the basics of how to do seed dormancy studies on special groups of plants for example orchids parasites aquatics halophytes and one chapter devoted to soil seed banks. Contains a revised up dated classification scheme of seed dormancy including a formula for each kind of dormancy. Detailed attention is given to physiological dormancy the most common kind of dormancy on earth. Encyclopedia of Plant and Crop Science (Print) Robert M. Goodman, 2004-02-27. In total 12 primary contributors including noted plant and animal ecologists present newly analyzed long term datasets on the floristics and phenological rhythms of their study sites identifying important seed dispersers and key plant taxa that sustain animal communities in Africa Madagascar Australasia and the Neotropics. *Plant Regeneration from Seeds* Carol C. Baskin, Jerry M. Baskin, 2022-03-17. *Plant Regeneration from Seeds A Global Warming Perspective* comprehensively reviews the effects caused by climate change on global plant regeneration growth and seed germination. Initial chapters discuss specific geographical regions such as steppes the arctic boreal and alpine zones dry and tropical forests and deserts. Subsequent chapters explore special seed related topics like fire soil seed banks crops weed emergence and invasive species. Written by leaders in the field of seed germination and plant growth this is an essential read for researchers and academics interested in plant growth plant regeneration seed germination and the effects of these in relation to climate change. Guides readers through the global effects of climate change on plant growth and seed germination including chapters on special seed related topics. Provides fundamental research on plant regeneration. Includes detailed coverage on specific geographic regions.
