**Northern European Overture to War, 1939-1941**, 2013-05-24. While the German invasion of Poland in September 1939 was a pivotal moment in European history and precipitated the outbreak of the Second World War, western historiography has largely neglected Northern Europe. Two questions dominated the course of events: the Anglo-German contest for control of the access to the Atlantic Ocean and the Soviet-German contest for control of their former territories as a precursor to the future Total War they expected to wage against each other. This anthology of 23 essays considers both these issues collectively and provides a new international perspective on the region's transition from the relative peace of the interwar era to the all out war following the German invasion of the Soviet Union in 1941. Contributors are Azar Gat, Michael Epkenhans, Andrew Lambert, Tom Kristiansen, Rolf Hobson, Gunnar Selius, Jörg Hillmann, Werner Rahn, Sawomir Dobski, Ole Kristian Grimnes, Eslovas Laurinavius, Alfred Erich Senn, Lars Ericson, Wolke, Karl Erik Haug, Boris

Information Security is usually achieved through a mix of technical organizational and legal measures These may include the application of cryptography the hierarchical modeling of organizations in order to assure confidentiality or the distribution of accountability and responsibility by law among interested parties The history of Information Security reaches back to ancient times and starts with the emergence of bureaucracy in administration and warfare Some aspects such as the interception of encrypted messages during World War II have attracted huge attention whereas other aspects have remained largely uncovered There has never been any effort to write a comprehensive history This is most unfortunate because Information Security should be perceived as a set of communicating vessels where technical innovations can make existing legal or organisational frame works obsolete and a breakdown of political authority may cause an exclusive reliance on technical means This book is intended as a first field survey It consists of twenty eight contributions written by experts in such diverse fields as computer science law or history and political science dealing with episodes organisations and technical developments that may considered to be exemplary or have played a key role in the development of this field These include the emergence of cryptology as a discipline during the Renaissance the Black Chambers in 18th century Europe the breaking of German military codes during World War II the histories of the NSA and its Soviet counterparts and contemporary cryptology Other subjects are computer security standards viruses and worms on the Internet computer transparency and free software computer crime export regulations for encryption software and the privacy debate Interdisciplinary coverage of the history Information Security Written by top experts in law history computer and information science First comprehensive work in Information Security      **To Die Gallantly** Timothy J Runyan, Jan M Copes, 2019-08-22
