Zech, 2013-04-17     **Massive Stars in Starbursts** Claus Leitherer, Space Telescope Science Institute (U.S.), 1991-05-16 This book reviews the importance of massive stars in several areas of astrophysics Massive stars are objects that are 10 100 times the mass of our Sun Above ten solar masses loss through stellar winds begins to have a major impact on the evolution of a star The upper limit of 100 solar masses is derived from observations Significant progress has now been achieved in massive star research New models along with high quality observations have improved our understanding of the formation structure atmosphere and evolution of these massive objects They are formed in violent bursts of star formation and are probably related to the phenomena observed in active galactic nuclei The workshop at the Space Telescope Science Institute examined the interplay between the astrophysics of massive stars and their location in extragalactic starburst regions There are eighteen chapters by leading researchers Each has been carefully edited to ensure that the book is a comprehensive introduction to the theory and observation of massive stars in starburst regions     **Stellar Astrophysics for the Local Group** A. Lane, Jeffrey L. Linsky, R. Wilson, 2013-12-11 This book was conceived to commemorate the continuing success of the guest observer program for the International Ultraviolet Explorer IUE satellite observatory It is also hoped that this volume will serve as a useful tutorial for those pursuing research in related fields with future space observatories As the IUE has been the product of the three way collaboration between the U S National Aeronautics and Space Administration NASA European Space Agency ESA and the British Engineering and Research Council SERC so is this book the fruit of the collaboration of the American and European participants in the IUE As such it is a testimony to timely international cooperation and sharing of resources that open up new possibilities The IUE spacecraft was launched on the 26th of January in 1978 into a geosynchronous orbit over the Atlantic Ocean The scientific operations of the IUE are performed for 16 hours a day from Goddard Space Flight Center in Greenbelt Maryland U S A and

for 8 hours a day from ESA Villafranca Satellite Tracking Station near Madrid Spain

**Galactic and Extragalactic Star Formation** Ralph E. Pudritz, Michel Fich, 2012-12-06 Recent advances in the instrumentation used to observe star forming regions in both our own Milky Way and in external galaxies have transformed the subject from a phenomenological pursuit into an increasingly unified physical science High resolution centimetre millimetre infrared and optical studies of local star forming clouds have allowed us to probe the physics of star formation down to spatial scales approaching those of the solar system These developments make it possible to better constrain the basic physical processes underlying star formation itself At the same time these new instruments have placed extragalactic studies on a footing detailed enough to allow comparison with star forming regions within our own galaxy This revolution means that we will soon be able to link the physics of local star forming regions to the global star forming properties of galaxies The entire structure of this NATO Advanced Study Institute was designed to explore this new view of the subject This Institute on Galactic and Extragalactic Star Formation was held from June 21 July 4 1987 at the Conference Centre in the village of Whistler British Columbia Canada The informal atmosphere of this lovely mountain resort stimulated many valuable scientific exchanges The Institute was funded by a major grant from NATO Scientific Affairs Additional financial and moral assistance was provided by the Canadian Institute for Theoretical Astrophysics CITA and McMaster University

*Proceedings of the Eighteenth General Assembly* Richard M. West, 2012-12-06 The XVIIIth General Assembly of the International Astronomical Union was held in Patras Greece from 17-26 August 1982 It was marked by the tragic death of the President of the IAU Professor M K V Bappu on August 19 1982 This sad event without precedent in the history of the Union posed serious problems to the organization of the General Assembly which could only be overcome by the full collaboration of all members the organizers and the Executive Committee A tribute to the memory of Prof Bappu was paid during a plenary meeting on 23 August 1982 The full texts of the speeches are published in Chapter I of this volume The excellent scientific programme in Patras was organized by the Presidents of the 40 IAU Commissions and coordinated by the IAU General Secretary 1979-1982 Professor P A Wayman The local arrangements were taken care of by Professor C Goudas and his collaborators from the Patras University Due to the unexpected withdrawal in 1979 of another invitation to host the 1982 IAU General Assembly the organizers in Greece had less than two years available for the extensive preparations and our hearty thanks are due to them for their persistent efforts which made this General Assembly an outstanding success

Cassinelli,Edward B. Churchwell,1993 **Reports on Astronomy** Richard M. West,2012-12-06 volume XIX A of IAU Transactions contains the reports by Presidents of Commissions covering the period July 1981 June 1984 The topics of IAU Commissions deal with all of contemporary astronomy and the present volume therefore constitutes an exhaustive and unique record of astronomical research during this interval It is particularly useful for astronomers and other scientists who want to gain an overview of a certain field not necessarily near their own research area Each Commission President was requested by early 1984 to begin preparations for the compilation of his/her Commission report All members of Commissions were asked to supply details about their individual research programmes The ensuing very substantial task of concatenating was undertaken in late 1984 by the Presidents often supported by a team of authors all recognized authorities in their fields In order to preserve some measure of uniformity which is in any case very difficult with so many authors editorial guidelines

were sent to Presidents including the number of pages allotted to each Commission      Star Clusters and How to Observe Them Mark Allison, 2006-04-04 Astronomy enthusiasts will all appreciate the detailed yet easily assimilated description of star clusters how they were formed as our Milky Way galaxy how they evolved and how they are classified The latest research has revealed a vast amount of fascinating information about the clusters along with some spectacular photographs Modern commercially made telescopes enable amateur astronomers to see a surprising amount of detail and to record using CCD cameras video webcams or even film some remarkably beautiful and detailed images Contained here also is detailed information on using refractors reflectors and of course Meade and Celestron's ubiquitous range of computer controlled SCT telescopes      Evolution of Massive Stars D. Vanbeveren, W. van Rensbergen, C. de Loore, 2012-12-06 Massive stars occupy an exceptional place in general astrophysics They trigger many if not all of the important processes in galactic evolution whereas due to their intrinsic brightness they offer the only until now possibility to study the stellar content and stellar behaviour in distant galaxies The last say 25 years massive stars have been the subject of numerous meetings discussing the influence of massive stars on population synthesis the number distribution of different types of massive stars the LBV phenomenon WR stars X ray binaries stellar winds in massive stars chemical peculiarities in massive stars supernova explosions of massive stars and the important SN1987A event the influence of massive stars and chemical evolution of galaxies It is clear that without a theory of stellar evolution the study of these topics loses a lot of its significance Massive star evolution therefore got a chance in these meetings but rarely as a prime subject The state of the art the physical processes and the uncertainties in stellar evolution were barely touched Even more the influence of close binaries in all these massive star meetings slowly disappeared the last say 13 years without any scientific justification although a significant fraction of stars occurs in close binaries with periods small enough so that both components will interact during their evolution Denying the binaries or not discussing their influence on results and conclusions makes the latter very uncertain or even completely unreliable      **Astronomie Extragalactique Dans L'infrarouge** Gary Allan Mamon, Xuan Thuan Trinh, J.
