Lunar Descent:

Analog Study of Descents from Lunar Orbit Joseph N. Sivo, Carl E. Campbell, 1962 **NASA Technical Memorandum**, 1988 **Lunar Descent** Allen Steele, 2015-05-19 The former head of a lunar mining operation returns to the moon and is immediately sucked into a dangerous morass of labor troubles, lies, larceny and corporate wrongdoing in this wildly entertaining science fiction thrill ride. There is big trouble on the moon. The blue collar working stiffs of Descartes Station, who mine the surface for minerals and the North Pole for water, have become increasingly dissatisfied with Skycorp's general disregard for its employees' well-being. Following the most recent spate of layoffs, the labor strike grumblings have only grown louder, so the company is sending former base administrator and recovering alcoholic Lester Riddell back into the fold in an attempt to boost morale and output alike. The truth, however, becomes shockingly apparent to Riddell almost immediately upon his return. Not only has he been unceremoniously dumped into a muddled mess of larceny, piracy and corporate malfeasance, it appears that Skycorp is purposely setting him up to fail, which could spell finis for Descartes Station and every trash-talking, pot-smoking, porn-loving Vacuum Sucker and Moondog who toils there. But as the Skycorp suits are about to discover, they've just made the biggest mistake of their corporate lives, because Lester Riddell is nobody's fall guy. Three-time Hugo Award winner Allen Steele has seen the near future, and it isn't pretty; it's noisy, dirty, dangerous and chaotic. Thrilling, wildly inventive, delightfully profane and totally outrageous, *Lunar Descent* is one hell of a rocket ride with a master of science fiction at the helm.

Moon Viorel Badescu, 2012-03-22 The Earth has limited material and energy resources. Further development of the humanity will require going beyond our planet for mining and use of extraterrestrial mineral resources and search of power sources. The exploitation of the natural resources of the Moon is a first natural step in this direction. Lunar materials may contribute to the betterment of conditions of people on Earth, but they also may be used to establish permanent settlements on the Moon. This will allow developing new technologies, systems and flight operation techniques to continue space exploration. In fact, a new branch of human civilization could be established permanently on the Moon in the next century. But meantime, an inventory and proper social assessment of the Moon's prospective energy and material resources is required. This book investigates the possibilities and limitations of various systems supplying manned bases on the Moon with energy and other vital resources. The book collects together recent proposals and innovative options and solutions. It is a useful source of condensed information for specialists involved in current and impending Moon-related activities and a good starting point for young researchers.

Lunar Outpost Erik Seedhouse, 2009-04-22 *Lunar Outpost* provides a detailed account of the various technologies, mission architectures, medical requirements and training needed to return humans to the Moon within the next decade. It focuses on the means by which a lunar outpost will be constructed and also addresses major topics such as the cost of the enterprise and the roles played by private companies and individual countries. The return of humans to the surface of the Moon will be critical to the exploration of the solar system. The various

missions are not only in pursuit of scientific knowledge but also looking to extend human civilization economic expansion and public engagement beyond Earth As well as NASA China s Project 921 Japan s Aerospace Exploration Agency Russia and the European Space Agency are all planning manned missions to the Moon and eventually to Mars The Ares I and Ares V are the biggest rockets since the Saturn V and there is much state of the art technology incorporated into the design of Orion the spacecraft that will carry a crew of four astronauts to the Moon Lunar Outpost also describes the human factors communications exploration activities and life support constraints of the missions
